

Methodological questionnaire

Statistics of employment, wages and hours of work derived from establishment surveys

The objective of this questionnaire is to obtain information about the most important features of the establishment survey(s) carried out in your country since 1990, that are used as sources of statistics of employment, wages and/or hours of work.

Please use as many questionnaires as there are establishment sources for these statistics. For each type of survey, please respond with reference to the latest (most recent) exercise. If you have any questions on which surveys should be covered by this questionnaire, please contact sources@ilo.org before completing the questionnaire. In case the most recent survey was conducted before 1990, please complete only section *A. Identification*.

This questionnaire is designed to require only a minimum of textual response. The use of pre-coded responses facilitates response but increases the number of pages in the questionnaire. The accompanying document provides international definitions and links to international classifications mentioned in this questionnaire.

We welcome any comments regarding this questionnaire (item J1. "Additional comments"). You can save and print the completed questionnaire at your convenience. Once finished, you can send it to us by clicking the submit button at the end of the questionnaire or by sending a saved copy of the completed questionnaire to sources@ilo.org.

Thank you for your cooperation.

11. Main changes in this survey since 1990 that have led to breaks in the series

Labor Force Survey was carried out here for the first time in 1994, as a pilot survey, and since 1995 this has been conducted as a regular annual survey.
In previous surveys, the frame for sample selection was the 1991 Census of population, households and dwellings and survey sample included about 3900 households.
The frame for sample selection for the 2004 Labor Force Survey was the 2002 Census, and the survey was carried out on a sample of over 6500 households.
When we created the instruments for the 2004 survey, the contents of the interview form was changed and that provided for the more precise defining of the main population contingents in this survey.
In 2008 the revised the questionnaire and the methodological guidelines for the LFS in accordance with the latest recommendations by Eurostat, due to the requirements to conduct Labor Force Survey twice (in April and October) in 2008.
