management arm of the **Programme on Safety and Health at Work and** ensure that workers and everyone concerned with their protection have need to prevent occupational injuries and diseases. CIS continuously monitors world literature on health through its contacts with publishers and with 140 focal points ("CIS Centres") at the national level. Summaries and citations of the most useful publications, as well as products based on the collection, are disseminated electronically and in print. The network of CIS Centres contributes to the exchange of information between persons responsible for the establishment and implementation of national policies and programmes.

CIS was founded in 1959 as a joint endeavour of the ILO, the International Social Security Association, the European Coal and Steel Community and the occupational safety and health authorities of 11 European countries. The member network of National Centres has grown to cover 100 countries all over the world. In March 2006, the Health and Safety Institute of the Arab Labour Organization in Damascus (Syria) became a CIS Centre. The African Regional Labour Administration Centre in Harare (Zimbabwe), in 2006. With the evolution of the CIS, CIS now enjoys the support of the European Commission.

Protecting workers against avian influenza
