SERIES DATA:

Series name:	Principal Investigator:	Currently available:
General Household Survey	Statistics South Africa	2002 - 2003

PURPOSE:

The main purpose of the General Household Survey (GHS) is to measure the level of development and performance of various government programmes and projects. This report specifically aims at providing national indicators on various living conditions such as access to services and facilities, education and health, for 2002. It also draws comparisons between the GHS 2002 results and the Census 2001 results.

GEOGRAPHIC LOCATION: South Africa

IMPORTANT VARIABLES: Employment, unemployment, education, health, access to facilities.

DEMOGRAPHIC VARIABLES: Age, gender, level of education, marital status, use of health services, economic activity and employment.

UNIVERSE: Households in the nine provinces of South Africa

METHOD OF DATA COLLECTION: Survey Questionnaire

SAMPLING:

A multi-stage stratified sample was drawn to run the GHS in 2002. In the initial stages, probability proportional to size principles were applied. The first stage was stratification by province, then by type of area within each province (urban or non-urban). Primary sampling units (PSUs) were then selected within each stratum. The smaller provinces were given a disproportionately large number of PSUs compared to the bigger provinces. Systematic sampling was then applied within each PSU to select 10 dwelling units (including units in hostels), as ultimate sampling units. All households at the selected dwelling units were interviewed. A sample comprised 30 000 dwelling units. Out of these, 1 313 dwelling units were found to be out of scope. Of the valid dwelling units, 3 439 households did not respond and 26 287 responded.

WEIGHTING:

A three-stage weighting procedure was done on the GHS 2002 that resulted in two sets of weights, household weights and person weights. The person weights are identical for all persons within a given household. Details of the derivation of the weights are provided in the Technical Notes.

UNITS OF OBSERVATION: Households

DATE OF DATA COLLECTION: 20 July – 2 August 2002

EXTENT OF DATA COLLECTION: 4 data files in ASCII and machine-readable documentation.

NOTES:

Most questions in the General Household Survey questionnaire are pre-coded, i.e. there is a set number of choices from which one or more must be selected. For open-ended 'write-in' questions, the description will note that post-coding occurred and explain how this was done. For most variables the coding is apparent from the questionnaire (available elsewhere in the documentation) and is not repeated in the variable description. Where the coding is not apparent, the description either provides the codes or indicates where code lists are to be found.

RESTRICTIONS:

Only available to bona fide researchers.

DATE STUDY ADDED:

Metadata: General Household Survey (GHS) 2002

The General Household Survey 2002 data is in three files. The files are flat, ASCII, fixed field files, with one line of given length per record. This format was chosen so as to make the data usable with as many statistical programs as possible, and thus accessible to as wide a range of people as possible.

Other important information for users is found in the:

- ◆ Questionnaire
- ◆ Additional code lists (occupation, industry, education)
- ◆ Relevant publications
- ◆ Web-site (www.statssa.gov.za)

THE DATA FILES

The files and the corresponding sections of the questionnaire are as follows:

PERSON : Data from Flap and Section 1
WORKER : Data from Sections 2
HOUSE : Data from Section 4
STRATUM_PSU : Stratum and PSU numbers

The files also contain some derived variables.

The information in each file contains the following:

- Nature of records in the file and population covered
- Description of variables

Description of variables

The description of the variables comprises the following information:

Descriptive name: This is a short English description plus the variable name in the original file used by Stats SA to construct the ASCII file.

Position of the variable: The position of the data within the record, recorded in the format (@xxx y.). “@xxx” indicates that the data begins at position (i.e. column) xxx and “y.” indicates that it is y digits wide. All data is numeric. All data is right justified.

Source: This is either the question in the questionnaire or, for derived variables, the method of derivation. Derived variables are usually found towards the end of a record.

Valid range: The range of valid values for the variable. For continuous variables this reflects the upper and lower limits as found in the data.

Not applicable: The code for not applicable is provided for each variable. These are now numeric.

Missing value: A code for “missing”/unspecified values is given for each variable.

Notes: Specific observations to be noted by users.

Most questions in the General Household Survey questionnaire are pre-coded, i.e. there is a set number of choices from which one or more must be selected. For open-ended ‘write-in’ questions, the description will note that post-coding occurred and

explain how this was done. For most variables the coding is apparent from the questionnaire (available elsewhere in the documentation) and is not repeated in the variable description. Where the coding is not apparent, the description either provides the codes or indicates where code lists are to be found.

Linking files

The data from different files can be linked on the basis of a record identifier. The record identifier is the first field/s in each file. Each record contains a number (UqNr), which constitutes a unique household identifier. All records with a given household identifier, no matter which file they are in, belong to the same household. For individuals, a further two digits constitute the Person number (PersonNr). When these are added to the household identifier, a unique individual identifier is created. Again, these can be used to link records from the PERSON and WORKER files. The syntax needed to merge information from different files will differ according to the statistical package used.

METHODOLOGY

Sample design

A multi-stage stratified sample was drawn using probability proportional to size principles. The first stage is stratification by province, then by type of area within each province. Primary sampling units (PSUs) were then selected proportionally within each stratum (urban or non-urban) in all provinces. Altogether 3000 PSUs were selected. Within each PSU ten dwelling units were selected systematically for enumeration.

The sample was drawn from the master sample, which Statistics South Africa uses to draw samples for its surveys. The master sample is drawn from the database of enumeration areas (EAs), as was established during the demarcation phase of census 1996. As part of the master sample, small EAs consisting of fewer than 100 dwelling units are combined with adjacent EAs to form primary sampling units (PSUs) of at least 100 dwelling units, to allow for repeated sampling of dwelling units within each PSU. The sampling procedure for the master sample involves explicit stratification by province and within each province, by urban and non-urban areas. Independent samples were drawn from each stratum within each province. The smaller provinces were given a disproportionately larger number of PSUs than the bigger provinces.

The master sample is divided into five independent clusters. In order to avoid respondent fatigue, the sample for GHS was drawn from a different cluster from the two clusters already being used for the LFS, which is a twice-yearly rotating panel survey. Altogether 30 000 dwelling units (including units in hostels) were visited for the GHS 2002.

Weighting the GHS of July/August 2002

A two-stage theoretical weighting procedure was done on the GHS 2002. In the first stage primary sampling units (PSU) are selected with probability proportional to size (PPS) from the census population. The PSU inclusion probability is given by

$$P_{PSU} = \frac{n_{PSU}}{N_{PSU}} n_s,$$

where n_{PSU} is the number of households constituting the selected PSU during census fieldwork, n_s is the number of PSUs per stratum, and N_{PSU} is the number of households constituting the selected stratum during census fieldwork. For GHS urban and rural strata were considered. In the second stage dwelling units were selected sequentially from each PSU in the sample to form clusters of ten dwelling units. The household inclusion probability per PSU is given by

$$P_{HH} = \frac{n_{HH}}{H_{HH}} r_{HH},$$

where n_{HH} is the number of selected dwelling units per PSU, H_{HH} is the number of household in the PSU in question at a particular time different from the census time, and r_{HH} is the response rate given by $r_{HH} = \frac{n_{RESP}}{n_T}$ where n_{RESP} is the number

of responding households and n_T is the total number of visited households per PSU. The adjusted sample weights are now given by

$$W_{HH} = \frac{1}{P_{PSU} \cdot P_{HH}}$$

Because there were undercounts in some PSUs (because households could not be traced or because of refusals to answer), the weight of each such PSU was adjusted upwards by a factor of n_{HH}/n^*_{HH} where n_{HH} was the number of households which should have been interviewed and n^*_{HH} was the number of households actually reached. Then all household weights were adjusted upwards by a further factor equal to the estimated population at the time of the GHS 2002 survey divided by the 1996 Census population estimate, to account for population growth between the 1996 Census (from which the master sample was drawn) and the date of the survey. These doubly adjusted weights are reported as the household weights in the data set.

The person weights are derived by further adjusting the household weights in order to reproduce the marginal totals of the estimated population at the time of the 2002 GHS by gender, population group, province and age group. A SAS macro called CALMAR was used for this purpose.

The population estimate was derived by a 'bottom up' (cohort-by-cohort) exponential extrapolation from the 1996 and 2001 censuses. Such an estimate is quite reliable for the total population and the gender, population group and provincial subtotals. It is less reliable for the age distribution. Improved population estimates will become available when Statistics South Africa completes its short-term population projection model. The weights in this and other surveys may be modified in the light of model estimates.

Estimation and use of standard error

The published results of the General Household Survey are based on representative probability samples drawn from the South African population, as discussed in the section on sample design. Consequently, all estimates are subject to sampling variability. This means that the sample estimates may differ from the population figures that would have been produced if the entire South African population had been included in the survey. The measure usually used to indicate the probable difference between a sample estimate and the corresponding population figure is the *standard error (SE)*, which measures the extent to which an estimate may have varied by chance because only a sample of the population was included.

There are two major factors, which influence the value of a standard error. The first factor is the sample size. Generally speaking, the larger the sample size, the more precise the estimate and the smaller the standard error. Consequently, in a national household survey such as the LFS, one expects more precise estimates at the national level than at the provincial level due to the larger sample size involved. The second factor is the variability between households of the parameter of the population being estimated, for example, the number of unemployed persons in the household.

Figure 18 indicates that:

- the standard error for the employed is 0,0105 (CV) x 11 382 000 (the employed) = 119 511,
- the standard error for the unemployed is 0,0192 (CV) x 4 941 000 (the unemployed) = 94 867,
- the standard error for the economically active is 0,0093 (CV) x 16 323 000 (the economically active) = 151 804, and
- the standard error for the unemployment rate is 0,0140 (CV) x 30,3 (unemployment rate) = 0,42.

FLAP

Gender (C_Gender)

(@17 1.)

Is a male or a female?

C	Is a male or a female?
	1 = MALE
	2 = FEMALE

Note to users

This question is asked for each household member, to determine their gender. This question is only applicable if there is a “Yes” in the previous question, which determines whether a person is a household member or not. The enumerators are instructed not to assume the gender of the members of the households by just looking at people’s names or physical appearances. In this instance they have to ask the respondent the gender of each member of the household without any assumptions.

Universe

Every person who normally resides in this household at least four nights a week.

Final code list

- 1 = Male
- 2 = Female
- 9 = Unspecified

Age (D_Age)

(@18 3.)

D. How old is? *(In completed years)*

D	How old is? <i>(In completed years - In whole numbers)</i> <i>Less than 1 year = 00.</i>
---	---

Note to users

This question is asked to find out the age of the household members. This is asked for each member of the household. The instruction is to write the years in whole numbers and not in words. Moreover, these years must be completed, thus if a person is two years and six months, the instruction is to write the two completed years. For those children who are less than a year, the instruction is to write 00.

Universe

Every person who normally resides in this household at least four nights a week.

Final code list

Less than 1 year = 0

Valid range: 15 – 130

Unspecified: 999

E. What population group does belong to?

E	What population group does belong to? 1 = AFRICAN/BLACK 2 = COLOURED 3 = INDIAN/ASIAN 4 = WHITE 5 = OTHER, <i>specify</i>
----------	---

Note to users

This question is asked to determine the population group of persons from the selected dwelling. The respondent must answer for each member without any assumptions. In this instance the enumerator is also instructed not to make any conclusions, which may be influenced by his observation or using people's names during the interview. This question may seem very sensitive to some respondents especially in this post apartheid era, but it is really important to find out the composition of the South African population.

Universe

Every person who normally resides in this household at least four nights a week.

Final code list

- 1 = African/Black
- 2 = Coloured
- 3 = Indian/Asian
- 4 = White

SECTION 1

Relationship to the head (q11relsh)

(@22 2.)

Q1.1 What is 's relationship to the head of the household?

1.1	What is 's relationship to the head of the household? (I.e. to the person in column 1) 1 = <i>Mark the head/acting head</i> 2 = HUSBAND/WIFE/PARTNER 3 = SON/DAUGHTER/STEPCHILD/ADOPTED CHILD 4 = BROTHER/SISTER 5 = FATHER/MOTHER 6 = GRANDPARENT/GREAT GRANDPARENT 7 = GRANDCHILD/GREAT GRANDCHILD 8 = OTHER RELATIVE (E.G. IN-LAWS OR AUNT/UNCLE) 9 = NON-RELATED PERSONS
------------	--

Note to users

This question is asked for each member of the household to determine their relationship to the head of the household. The respondent is asked to give the information on how each member is related to the head of the household. The enumerator is

instructed to cross-check the information in this question with the one on the flap, especially on the head or acting head of the household.

Universe

Every person who normally resides in this household at least four nights a week.

Final code list

- 1 = Mark the head/acting head
- 2 = Husband/wife/partner
- 3 = Son/Daughter/Stepchild/Adopted child
- 4 = Brother/Sister
- 5 = Father/Mother
- 6 = Grandparent/Great grandparent

1.2.a	What is’s present marital status? 1 = MARRIED OR LIVING TOGETHER AS HUSBAND AND WIFE 2 = WIDOW/WIDOWER 3 = DIVORCED OR SEPARATED 4 = NEVER MARRIED
--------------	---

→ Go to Q 1.3.a

Note to users

This question is about the marital status of the members of the household. There are different kinds of marriages in South Africa, even if a couple is living together as husband and wife they are regarded to be married. Both modern and traditional marriages are considered in this question.

If the response is widow/widower, divorced or separated and never married the enumerator is instructed to go to Q 1.3.a, which is on mortality for households.

Universe

Every person who normally resides in this household at least four nights a week.

Final code list

- 1 = Married or living together as husband and wife
- 2 = Widow/Widower
- 3 = Divorce or Separated
- 4 = Never married

Q1.2.b Does’s spouse/partner live in this household?

1.2.b	Does’s spouse/partner live in this household? 1 = YES 2 = NO
--------------	---

→ Go to Q 1.3.a

Note to users

This question is only applicable for those people who said “Yes” in (Q 1.2.a), thus “Married or living together as husband and wife”. It is through this question that it will be seen on average, how many households partners live together.

Universe

Only those people who are living in the households with their partners.

--------------	--

Note to users

This question is only applicable for those people who said “Yes” in (Q 1.2.a), thus “Married or living together as husband and wife”. It confirms the information on the previous question, which seeks to determine whether couples within the visited household live together or not.

Universe

Only applicable to those living in partners within the selected dwelling unit.

Q1.3.a Is’s fathered still alive?

1.3.a	Is’s father still alive? 1 = YES 2 = No 3 = Don't know } → Go to Q 1.4.a
--------------	---

Note to users

This question wants to find out if the father is still alive or has passed away. The father does not necessarily have to be member of the household. That means one’s father may be alive but living somewhere outside the selected dwelling unit. For codes 2 and 3 the instruction is to go to Q 1.4.a.

Universe

This is applicable to each member of the household.

Final code list

1 = Yes
2 = No
3 = Don’t know

--------------	---

Note to users

This is a follow up question to the previous one (Q 1.3.a), but interested on whether the father is the member of the visited household or not. The instruction is that for those who said “No” the interview must proceed to question Q 1.4.a.

Universe

Only for those with “Yes” in the previous question (1.3.a).

Final code list

1 = Yes

2 = No

--------------	--

Note to users

This question wants to find out if the mother is still alive or has passed away. The mother does not necessarily have to be a member of the household. That means one’s mother may be alive but living somewhere outside the selected dwelling unit. For codes 2 and 3 the instruction is to go to Q 1.5.a.

Note to users

This question is only applicable to the households, which answered “Yes” in Q1.29 (Households with people with disabilities which limit their daily activities). The enumerator is instructed to read out all the categories so that there can either be a “Yes” or “No” answer. Moreover, it is sometimes possible for a person to suffer for more than one disability, hence the categories have to be read out. For any other disability that is not categorized, there is provision to specify them.

-------------	---

Note to the users

This question applies to the whole household on services/assistance by the Welfare Office in the past twelve months. The interest in this question is to find out exactly what kind of service/assistance the household received from these offices. For example, was it social grant, poverty relief/job creation project or consulting the Social worker. The instruction to the enumerator is that if the answer is “No” and “Don’t know” for (a, b and c) there should be a skip to Section 2.

Note to users

This question is applicable to all household members aged 15 and above, regarding their involvement with the economic activities in the last seven days. This is part of the questionnaire where there would be a differentiation between economically active population and those who are not economically active. The instruction to the enumerators is that these activities must be for at least one hour within the seven days. In order to be certain that the categories have been answered there should either be “Yes” or “No” in all of them. Most importantly, is that if there is “Yes” to any part of this question there should be skip to Q 2.3. If all the categories are “No” there should be a continuation to the next question.

	} → Go to Q 2.14

Note to users

This is applicable to all household members aged 15 and above who did not work and were absent from work in the last seven days (those with “No” from Q 2.2). The interest in this question is to determine whether people can accept suitable job if given. What must be considered is that there are different reasons why people are not working and would not even accept the suitable jobs when offered as categorised in the previous question (Q 2.10). For those who answered “No” and “Don’t know” there should be a skip to Q 2.14.

Note to users

This question is only applicable if a person is prepared to accept a suitable job offer as reflected in question (Q 2.11). The interest is to find out whether a person has taken any action to look for a job in the past four weeks. The instruction to the numerator is to complete both given categories with either a “Yes” or “No” answer.

C	Is a male or a female?
	1 = MALE
	2 = FEMALE

Note to users

This question is asked for each household member, to determine their gender. This question is only applicable if there is a “Yes” in the previous question, which determines whether a person is a household member or not. The enumerators are instructed not to assume the gender of the members of the households by just looking at people’s names or physical appearances. In this instance they have to ask the respondent the gender of each member of the household without any assumptions.

-------------	--	--

N/B Code 4 Isn't part of the questionnaire but was post-coded for those households that did not have children aged 5-17, who live on the streets.

Note to users

This question is applicable for all households and interested in children aged between 5 years and 17 years who left their households to live in the streets in the past 12 months. The enumerator is instructed to be cautious about various

circumstances. For example, if members of the household know that their child/ren are living in the street the answer should be “Yes” but if they do not know where they are, the answer should “Don’t know”. There should not be any form of assumption that any child that is not at home is living in the streets.

DATA FILE: STRATUM_ PSU

The GHS' is based on multistage stratified cluster sample (i.e. complex samples). The sampling population is first stratified into explicit strata, then pre-specified numbers of primary sampling units (i.e. PSU's) are drawn in the strata, whereupon a fixed number of households are drawn in each drawn PSU's. The consequence of this is that statistical techniques of analysis based on a simple random sample design will give liberal (i.e. too significant) results. This is the case with most generally available statistical software packages. However, dedicate software is available which takes the complexity of the of the sample design into consideration and which requires stratum and PSU numbers. The STRATUM_PSU data file is supplied for

this type of analysis and can be merged with any of the other three data files i.e. PERSON, WORKER and HOUSE by the variable unique number (UqNr), position 1 to 13.

This file contains stratum and PSU numbers.

Unique number (UqNr) (@1 13)

Unique household identifier

Note: This is the unique household identifier which can be used to link data from this file with data for the same household from other files.

Stratum number (Stratum) (@14 2)

PSU number (PSU) (@16 3)

Please Note: To get rid of non-existing stratum numbers all records with invalid weights should be deleted after merging

INDUSTRY CLASSIFICATION CODE LIST

MAJOR DIVISION 1: AGRICULTURE, HUNTING, FORESTRY AND FISHING

Major group	AGRICULTURE, HUNTING AND RELATED SERVICES
110	GROWING OF CROPS
111	Growing of grains (eg. maize, wheat, barley etc.), oil seeds (eg. sunflowers) and ground nuts (eg. peanuts)
112	Growing of vegetables
113	Growing of other horticultural specialities and nursery products
114	Growing of fruit
115	Growing of vineyards
116	Growing sugar cane
117	Growing of cotton
118	Growing of <i>other</i> crops (eg. spices) / Unspecified (Where no other details are given)
120	FARMING OF ANIMALS
121	Animals for meat, including breeding but <i>excluding</i> chicken, game or horses
122	Chickens, including breeding and slaughtering
123	Horses
124	Dairy farming, including milk etc.
125	Sheep
126	Ostrich
127	Goats
128	Farming with animals, unspecified (ie where no other details are available)
129	Other animal farming: production of animal products nec.
130	PRODUCTION OF ORGANIC FERTILIZER
140	FORESTRY, LOGGING AND RELATED SERVICES
141	Forestry and related services
142	Logging and related services

MAJOR DIVISION 1: AGRICULTURE, HUNTING, FORESTRY AND FISHING.....Concluded

Major group	AGRICULTURE, HUNTING AND RELATED SERVICES.....Concluded
150	FISHING, OPERATIONAL OF FISH HATCHERIES AND FISH FARMS
151	Ocean and coastal fishing
152	Rivers and dams (ie. inland fishing)
153	Fish hatcheries and fish farms
160	GROWING OF CROPS COMBINED WITH FARMING OF ANIMALS (MIXED FARMING)
170	AGRICULTURAL AND ANIMAL HUSBANDRY SERVICES, EXCEPT VETERINARY ACTIVITIES
171	Animal boarding activities without health care
172	Pest control in connection with agriculture
173	Farm development, orchards and field preparation
174	Providing agricultural machinery with drivers and crew
175	Harvesting and related activities
176	Landscaping gardening and maintenance
177	Artificial insemination
178	Manure gathering, dipping
180	GAME HUNTING, TRAPPING AND GAME PROPAGATION, INCLUDING RELATED SERVICES
181	Game propagation
182	Hunting and trapping, including related services
183	Game breeding
190	FARMING, UNSPECIFIED If <i>no</i> details were given and the type of farming can also not be deduced from the type of work the farmworkers are doing

MAJOR DIVISION 2: MINING AND QUARRYING

Major group	MINING AND QUARRYING
210	MINING OF COAL AND LIGNITE
221	EXTRACTION OF CRUDE PETROLEUM AND NATURAL GAS; SERVICE ACTIVITIES INCIDENTAL TO OIL AND GAS EXTRACTION, EXCLUDING SURVEYING Extraction of crude petroleum and natural gas Service activities incidental to oil and gas extraction, excluding surveying
230	MINING OF GOLD AND URANIUM ORE
240	MINING OF METAL ORES
241	MINING OF IRON ORE
242	MINING OF NON-FERROUS METAL ORES Chrome Copper Manganese Platinum group metals Other metal ore mining
250	OTHER MINING AND QUARRYING
251	STONE QUARRYING, CLAY AND SANDPITS Dimension stone (granite, slate, and wonderstone) Limestone and limeworks Other stone quarrying, including stone crushing, and clay and sandpits
252	MINING OF DIAMONDS (INCLUDING ALLUVIAL DIAMONDS)
253	MINING AND QUARRYING N.E.C. Mining of chemical and fertilizer minerals Phosphates Other chemical and fertilizer mineral mining Extraction and evaporation of salt Other mining and quarrying n.e.c. Mining of precious and semi-precious stones, except diamonds Asbestos Other minerals and materials n.e.c.
290	SERVICE ACTIVITIES INCIDENTAL TO MINING OF MINERALS

MAJOR DIVISION 3: MANUFACTURING

Major group	MANUFACTURING
300	MANUFACTURE OF FOOD PRODUCTS, BEVERAGES AND TOBACCO PRODUCTS
301	PRODUCTION, PROCESSING AND PRESERVATION OF MEAT, FISH, FRUIT, VEGETABLES, OILS AND FATS Production, processing and preserving of meat and meat products Slaughtering, dressing and packing of livestock, including poultry and small game for meat Manufacture of prepared and preserved meat, including sausage; by-products (hides, bones, etc.) Production of lard and other edible fats Processing and preserving of fish and fish products Manufacture of canned, preserved and processed fish, crustacea and similar foods Processing and preserving of fruit and vegetables Manufacture of canned, preserved, processed and dehydrated fruit and vegetables, including fruit juices, juice extracts and potato flour meal Manufacture of vegetable and animal oils and fats Manufacture of crude oil and oil seed cake and meal Manufacture of compound cooking fats, margarine and edible oils
302	MANUFACTURE OF DAIRY PRODUCTS Processing of fresh milk (pasteurising, homogenising, sterilising and vitaminising) Manufacture of butter and cheese Manufacture of ice cream and other edible ice, whether or not containing cream or chocolate Manufacture of milk powder, condensed milk and other edible milk products, e.g. ghee, casein or lactose
303	MANUFACTURE OF GRAIN MILL PRODUCTS, STARCHES AND STARCH PRODUCTS AND PREPARED ANIMAL FEEDS Manufacture of flour and grain mill products Manufacture of flour and grain mill products, including rice and vegetable milling; grain mill residues Manufacture of breakfast foods Manufacture of starches and starch products Manufacture of prepared animal feeds
304	MANUFACTURE OF OTHER FOOD PRODUCTS Manufacture of bakery products Manufacture of sugar, including golden syrup and castor sugar Manufacture of cocoa, chocolate and sugar confectionery Manufacture of macaroni, noodles, couscous and similar farinaceous products Manufacture of other food products n.e.c. Manufacture of coffee, coffee substitutes and tea Manufacture of nut foods Manufacture of spices, condiments, vinegar, yeast, egg products, soups and other food products n.e.c.
305	MANUFACTURE OF BEVERAGES Distilling, rectifying and blending of spirits; ethyl alcohol production from fermented materials; manufacture of wine Manufacture of beer and other malt liquors and malt Breweries, except sorghum beer breweries Sorghum beer breweries Manufacture of malt Manufacture of soft drinks; production of mineral waters

MAJOR DIVISION 3: MANUFACTURING.....Continue

Major group	MANUFACTURING
306	MANUFACTURE OF TOBACCO PRODUCTS
310	MANUFACTURE OF TEXTILES, CLOTHING AND LEATHER GOODS
311	SPINNING, WEAVING AND FINISHING OF TEXTILES Preparation and spinning of textile fibres; weaving of textiles Preparatory activities in respect of animal fibres, including washing, combing and carding of wool Preparatory activities in respect of vegetable fibres Spinning, weaving and finishing of yarns and fabrics predominantly of wool and other animal fibres Spinning, weaving and finishing of yarns and fabrics predominantly of vegetable fibres Finishing of textiles Finishing of purchased yarns and fabrics
312	MANUFACTURE OF OTHER TEXTILES Manufacture of made-up textile articles, except apparel Manufacture of blankets, made-up furnishing articles and stuffed articles Manufacture of tents, tarpaulins, sails and other canvas goods Manufacture of automotive textile goods (including safety belts, seat covers and upholstery) Manufacture of other textile articles Manufacture of carpets, rugs and mats Manufacture of cordage, rope, twine and netting Manufacture of other textiles n.e.c.
313	MANUFACTURE OF KNITTED AND CROCHETED FABRICS AND ARTICLES Garment and hosiery knitting mills Other knitting mills
314	MANUFACTURE OF WEARING APPAREL, EXCEPT FUR APPAREL Manufacture of men's and boys' clothing Manufacture of women's, girls' and infants' clothing Bespoke tailoring Manufacture of hats, caps and ties
315	DRESSING AND DYEING OF FUR; MANUFACTURE OF ARTICLES OF FUR Dressing and dyeing of fur, manufacture of artificial fur, fur apparel and other articles of fur
316	TANNING AND DRESSING OF LEATHER; MANUFACTURE OF LUGGAGE, HANDBAG, SADDLERY AND HARNESS Tanning and dressing of leather Manufacture of luggage, handbags and the like, saddlery and harness Manufacture of travel goods and ladies' handbags Manufacture of other general and small goods of leather and leather substitutes, including harness and saddlery
317	MANUFACTURE OF FOOTWEAR

MAJOR DIVISION 3: MANUFACTURING.....Continue

Major group	MANUFACTURING
320	MANUFACTURE OF WOOD AND OF PRODUCTS OF WOOD AND CORK, EXCEPT FURNITURE; MANUFACTURE OF ARTICLES OF STRAW AND PLAITING MATERIALS; MANUFACTURE OF PAPER AND PAPER PRODUCTS; PUBLISHING, PRINTING AND REPRODUCTION OF RECORDED MEDIA
321	SAWMILLING AND PLANING OF WOOD Sawmilling and preserving of timber Other mill products, including wattle bark grinding and compressing
322	MANUFACTURE OF PRODUCTS OF WOOD, CORK, STRAW AND PLAITING MATERIALS Manufacture of veneer sheets; manufacture of plywood, laminboard, particle board and other panels and boards Manufacture of builders' carpentry and joinery Manufacture of wooden containers Manufacture of other products of wood; manufacture of articles of cork, straw and plaiting materials Coffins (excluding the manufacture of coffins by funeral undertakers) Picture frames and framing Other articles of wood, cork, straw and plaiting materials, including woodcarving and woodturning
323	MANUFACTURE OF PAPER AND PAPER PRODUCTS Manufacture of pulp, paper and paperboard Manufacture of corrugated paper and paperboard and of containers of paper and paperboard Manufacture of corrugated paper and paperboard Manufacture of containers of paper and paperboard Manufacture of other articles of paper and paperboard Stationery Other paper products
324	PUBLISHING Publishing of books, brochures, musical books and other publications Publishing of newspapers, journals and periodicals Publishing of recorded media Other publishing
325	PRINTING AND SERVICE ACTIVITIES RELATED TO PRINTING Printing Service activities related to printing
326	REPRODUCTION OF RECORDED MEDIA

Major group	MANUFACTURING
330	MANUFACTURE OF COKE, REFINED PETROLEUM PRODUCTS AND NUCLEAR FUEL; MANUFACTURE OF CHEMICALS AND CHEMICAL PRODUCTS; MANUFACTURE OF RUBBER AND PLASTIC PRODUCTS
331	MANUFACTURE OF COKE OVEN PRODUCTS
332	PETROLEUM REFINERIES / SYNTHESISERS Petrol, fuel oils, lubricating oils and greases, primarily from crude oil Petrol, fuel oils, lubricating oils and greases, primarily from coal Petrol, fuel oils, lubricating oils and greases, primarily from natural gas Lubricating oils and greases, primarily from other organic products Compounded and blended lubricating oils and greases from purchased materials other than crude petroleum Other petroleum/synthesised products n.e.c.
333	PROCESSING OF NUCLEAR FUEL
334	MANUFACTURE OF BASIC CHEMICALS Manufacture of basic chemicals, except fertilizers and nitrogen compounds Manufacture of fertilizers and nitrogen compounds Manufacture of plastics in primary form and of synthetic rubber
335	MANUFACTURE OF OTHER CHEMICAL PRODUCTS Manufacture of pesticides and other agro-chemical products Manufacture of paints, varnishes and similar coatings, printing ink and mastics Manufacture of pharmaceuticals, medicinal chemicals and botanical products Manufacture of soap and detergents, cleaning and polishing preparations, perfumes and toilet preparations Manufacture of soap and other cleaning compounds Manufacture of perfumes, cosmetics and other toilet preparations Manufacture of other preparations such as polishes, waxes and dressings Manufacture of other chemical products n.e.c. Manufacture of edible salt Manufacture of explosives and pyrotechnic products Manufacture of adhesives, glues, sizes and cements Manufacture of other chemical products n.e.c.
336	MANUFACTURE OF MAN-MADE FIBRES
337	MANUFACTURE OF RUBBER PRODUCTS Manufacture of rubber tyres and tubes; retreading and rebuilding of rubber tyres Manufacture of tyres and tubes Rebuilding and retreading of tyres Manufacture of other rubber products
338	MANUFACTURE OF PLASTIC PRODUCTS

MAJOR DIVISION 3: MANUFACTURING.....Continue

Major group	MANUFACTURING
340	MANUFACTURE OF OTHER NON-METALLIC MINERAL PRODUCTS
341	MANUFACTURE OF GLASS AND GLASS PRODUCTS Manufacture of sheet and plate glass, glass blocks, tubes and rods; glass fibres and glass wool Manufacture of glass containers; glass kitchenware and tableware; scientific and laboratory glassware, clock and watch glasses and other glass products n.e.c.
342	MANUFACTURE OF NON-METALLIC MINERAL PRODUCTS N.E.C Manufacture of non-structural non-refractory ceramic-ware Manufacture of refractory ceramic products Manufacture of structural non-refractory clay and ceramic products Manufacture of cement, lime and plaster Manufacture of articles of concrete, cement and plaster Cutting, shaping and finishing of stone Manufacture of other non-metallic mineral products n.e.c. Abrasives Other non-metallic mineral products n.e.c.
350	MANUFACTURE OF BASIC METALS, FABRICATED METAL PRODUCTS MACHINERY AND EQUIPMENT AND OF OFFICE, ACCOUNTING AND COMPUTING MACHINERY
351	MANUFACTURE OF BASIC IRON AND STEEL Basic iron and steel industries, except steel pipe and tube mills Steel pipe and tube mills
352	MANUFACTURE OF BASIC PRECIOUS AND NON-FERROUS METALS Refining of precious metals, e.g. gold, silver, platinum Manufacture of primary non-ferrous metal products, excluding precious metals
353	CASTING OF METALS Casting of iron and steel Casting of non-ferrous metals
354	MANUFACTURE OF STRUCTURAL METAL PRODUCTS, TANKS, RESERVOIRS AND STEAM GENERATORS Manufacture of structural metal products Manufacture of metal structures or parts thereof Other structural metal products, e.g. metal doors, windows and gates Manufacture of tanks, reservoirs and similar containers of metal Manufacture of steam generators, except central heating hot water boilers
355	MANUFACTURE OF OTHER FABRICATED METAL PRODUCTS; METALWORK SERVICE ACTIVITIES Forging, pressing, stamping and roll-forming of metal; powder metallurgy Treatment and coating of metals; general mechanical engineering on a fee or contract basis Treating and coating of metals General mechanical engineering on a fee or contract basis Manufacture of cutlery, hand tools and general hard-ware Manufacture of other fabricated metal products n.e.c. Manufacture of metal containers, e.g. cans and tins Manufacture of cables and wire products Manufacture of springs (all types) Manufacture of metal fasteners

SECTION 3 This section covers information regarding children ever born

The following information must be obtained in respect of every woman aged between 12 and 50 years. For each woman record the total number of children ever born alive. Include all children born alive, (i.e all those who are still living, whether or not they live in the household, and those who are dead). Do not include stillbirths and children adopted by the mother. Start with the last born and strictly follow the birth order. **Do not forget babies.**

If there is no woman in the household, go to section 4.

Read out: I am now going to ask regarding mothers in this household

3.0.1	Is there any woman in this household aged between 12 and 50 years, who has ever given birth? 1 = Yes 2 = No End of this section. Go to Section 4	<input type="checkbox"/> 1 <input type="checkbox"/> 2

General household survey

July 2002

Co-operation between Statistics South Africa (Stats SA), the citizens of the country, the private sector and government institutions is essential for a successful statistical system. Without continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

Stats SA publishes approximately three hundred different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally, but also by international economic and social-scientific communities, Stats SA releases are published in English only.

General Household Survey Report

1 Introduction

This report presents the results of the General Household Survey (GHS) conducted in July and August 2002 by Statistics South Africa. The survey collected information on a variety of subjects including education, health, labour market, births, access to services and facilities, and quality of life.

1.1 Background of the survey

Statistics South Africa conducted the October Household Survey (OHS) annually from 1994 to 1999, based on a probability sample of a large number of households ranging from 16 000 households to 30 000 households each year (depending on availability of funding). This survey was discontinued in 1999 due to the re-prioritisation of surveys in the face of financial constraints. February 2000 saw the birth of the Labour Force Survey (LFS), which is a biannual survey conducted by Statistics South Africa in March and September of each year. The LFS covers some areas previously covered by the OHS but not all, since it is a specialised survey principally designed to measure the dynamics in the labour market. The LFS of September each year includes a section designed to measure social indicators such as access to infrastructure. Again, this section does not go into as much depth as the OHS used to.

A need was therefore identified by the users of Statistics South Africa for a regular survey designed specifically to measure the level of development and performance of government programmes and projects. The GHS was developed for this purpose. The first round of the GHS was conducted in July/August 2002. This report gives the results of the first round of the GHS.

1.2 Purpose of the study

The main purpose of the GHS is to measure the level of development and performance of various government programmes and projects. This report specifically aims at providing national indicators on various living conditions such as access to services and facilities, education and health, for 2002. It also draws comparisons between the GHS 2002 results and the Census 2001 results.

1.3 Methodology

1.3.1 Sampling¹

A multi-stage stratified sample was drawn to run the GHS in 2002. In the initial stages, probability proportional to size principles were applied. The first stage was stratification by province, then by type of area within each province (urban or non-urban). Primary sampling units (PSUs) were then selected within each stratum. The smaller provinces were given a disproportionately large number of PSUs compared to the bigger provinces. Systematic sampling was then applied within each PSU to select 10 dwelling units (including units in hostels), as ultimate sampling units. All households at the selected dwelling units were interviewed. A sample comprised 30 000 dwelling units. Out of these, 1 313 dwelling units were found to be out of scope. Of the valid dwelling units, 3 439 households did not respond and 26 287 responded.

1.3.2 Weighting²

A three-stage weighting procedure was done on the GHS 2002 that resulted in two sets of weights, household weights and person weights. The person weights are identical for all persons within a given household. Details of the derivation of the weights are provided in the Technical Notes.

¹ See technical notes for detailed information

² See technical notes for detailed information

1.3.3 Questionnaire and data collection

The questionnaire was designed taking into consideration the need to compare results of this survey to the one conducted in June 2001 in the 13 nodal areas identified as priority areas for the Integrated Rural Development Strategy (IRDS), namely, the Social Development Indicators Survey (SDIS). The questions in the GHS were similar to the ones used in the SDIS as proposed by representatives of departments in the social cluster of government responsible for implementation of the IRDS.

Data was collected from 20 July to 2 August 2002 by trained fieldworkers in all nine provinces. Face-to-face interviews were used as a method of data collection.

1.4 Limitations of the study

Household surveys in general are limited by their conceptualisation and implementation strategies, including survey and sampling design, sample size, questionnaires and the implementation of fieldwork, data-capture processes and editing. The extent of some errors, for example sampling errors, can be estimated, while others cannot, for example non-sampling errors that occur during fieldwork and the interpretation of the meaning of questions by respondents. Statistics South Africa, through its survey programmes, tries to reduce both these sources of error.

Comparisons of the results of the GHS to the results of earlier surveys (October Household Surveys and Labour Force Surveys) could not be made in this report because the population estimates for this survey are based on the Census 2001 results, whereas the population estimates for the previous surveys were based on Census 1996. Statistics South Africa is currently benchmarking the results of the previous surveys to the Census 2001 count.

While comparisons could be made at individual level between Census 2001 and GHS 2002, comparisons at household level could not be made because of different methodologies during data collection. For example, during census data collection, some hostels were treated differently from the way they are treated in surveys. In future hostels will be treated in a similar manner as census to allow the comparison.

Comparisons between Census 2001 and GHS 2002 are also not possible on the labour market information, as the questions were asked differently. The GHS had more probing questions on labour market status than the census. Comparisons between the GHS and the corresponding Labour Force Survey (LFS) results could also not be done, since the GHS weights are benchmarked to Census 2001 population estimates and the LFS September 2002 weights are benchmarked to the Census 1996 population estimates.

Surveys and population censuses differ in their nature and methodology, which makes them more appropriate to measure certain phenomena, and less appropriate to measure others. For example, a census may not be appropriate to measure labour market information (as described in the above paragraph) because there is no room for probing questions, whereas surveys may be more appropriate because probing leads to more detailed information. Similarly when comparing information on education as measured by a census and as measured by a survey, the proportion of people with no education may differ. A census may show a significantly higher proportion of people with no education than a survey. This may be partly explained by fieldwork anomalies in a survey.

1.5 Comparisons with other surveys

As noted above, it is not advisable to compare the results of the first GHS with those of the five rounds of the OHS or with the SDIS, since the GHS is benchmarked to Census 2001, while the other surveys are presently benchmarked to Census 1996. The results of the GHS 2002 will be comparable with these other surveys once they have been benchmarked to Census 2001.

2 Main findings

2.1 Population

In July/August 2002, the South African population was estimated to consist of 45,5 million people. Statistics South Africa is 95% confident that the true population size lies somewhere between 44,6 million and 46,3 million people¹. According to Census 2001, the total population in South Africa in October 2001 amounted to 44,8 million people. Figure 1 indicates population size by province in October 2001 and in July/August 2002. There was a slight increase in the population size in every province except Northern Cape, which shows a slight decrease from 823 000 people in October 2001 to an estimated 819 000 people in July 2002.

Figure 1: Estimated population by province, October 2001 and July/August 2002

Even though growth was found in all provinces, the share of the population among provinces did not change. Figure 2 presents the distribution of the population by province as measured in 2001 by the census and in 2002 by the GHS. It indicates that KwaZulu-Natal had the largest proportion of people in South Africa and Northern Cape had the smallest, even though Northern Cape is the largest in area.

Figure 2: Percentage of the population in each province, July/August 2002

2.2 Education

The results of the GHS 2002 indicate that of those aged 20 years and above and no longer attending any educational institution, the highest proportion left school with some secondary education but before finishing Grade 12 (approximately 31,1%), while 20,6% had finished Grade 12 and 8,2% had educational qualifications higher than Grade 12.

Figure 3: Distribution of people 20 years and older not attending an educational institution by highest level of education, July/August 2002

Figure 4 examines the same variable by population group. Africans had the highest percentage of people of this age group with no formal education (15,3%). On the other hand, only 0,2% of whites of this age group had no education, while the percentages with some primary education or complete primary school were higher but still less than 1,0%. It is noted that in all population groups except the white group, the highest proportion had left school with some secondary education, but before they finished Grade 12. Among whites the largest proportion was of people who had completed Grade 12.

Figure 4: Distribution of people aged 20 years and older not attending an educational institution by highest level of education and population group, July/August 2002

It is compulsory in South Africa for children aged 7 to 15 years to be attending an educational institution or to be receiving formal education. The results of the survey indicate that 3,4% of the children aged 7 to 15 years were not attending any educational institution. Figure 5 shows the percentage in each population group. The percentage of coloured children not attending an educational institution was higher (4,1%) than the other population groups (approximately 3,6% for African children, 0,7% for white children and 0,5% for Indian/Asian children). Among those not attending an educational institution, 37% cited 'no money for school fees' as the main reason for not attending, while 8,6% said 'education is useless or uninteresting'.

Figure 5: Proportion of children aged 7 to 15 years in each population group not attending school, July/August 2002

2.3 Health

Figure 6 gives the proportions of people with access to a medical aid scheme in each population group. It shows that:

- Overall, approximately 15,2% of the population in South Africa were covered by a medical aid scheme.
- The majority of the white population had access to a medical aid scheme (68,2%), followed by Indians/Asians (29,0%), and then coloureds (18,8%). The African population had the smallest proportion of people with access to a medical aid scheme (8,0%).

Figure 6: Proportion of people in each population group with medical aid coverage, July/August 2002

Figure 7 indicates the proportion of people in each population group who were sick in the month prior to the survey and consulted a health worker, by the work sector of the health worker (public or private). The figure shows that 57,2% consulted in a public sector and 42,8% in the private sector. When looking at this by population group, the following was found:

- The majority of Africans and coloureds consulted in the public sector (63,5% and 60,9% respectively) whereas the majority of Indians/Asians and whites consulted in the private sector (61,9% and 83,1% respectively).
- Whites had the highest proportion of people who consulted in the private sector, followed by Indians/Asians, coloureds and Africans.

Figure 7: Distribution of those who consulted a health worker in each population group by sector of the health worker

Table A indicates that 12,9% of the people who consulted in the public sector were dissatisfied with the service they received. On the other hand, only 2,9% who consulted in the private sector were dissatisfied with the service.

Table A: Number and percentage of those who consulted in the private and public health sector, by level of satisfaction with the service received: GHS 2002

2.4 Social welfare

In July/August 2002, 3,9% of the population had used the social welfare office in the 12 months prior to the survey interview. This facility is most likely to be used by women, especially African women. Figure 8 indicates the percentages of each population group who made use of this facility.

- Overall, 5,3% of women used the social welfare office and 2,4% of men.
- In all population groups, the percentage of women who used the social welfare office exceeded that of men. However, among the Indian/Asian population, the difference between the percentages of men and women was not as pronounced as in other population groups.
- African and coloured women had the highest percentage of those who made use of the welfare office (5,7% for both), and African women constitute about 61% of the total number of people (both men and women in all population groups) who made use of this facility.

Figure 8: Proportion of males and females in each population group who made use of a social welfare office in the 12 months prior to the survey interview: GHS 2002

Figure 9 indicates that of the 3,9% of the population who made use of the social welfare office, most were seeking a social grant (82,3%), followed by social worker services (22,1%) and then poverty relief (2,4%).

2.5 The labour market in July/August 2002

Stats SA uses two definitions of unemployment, the official definition and the expanded definition¹.

In Table B and Table C, Stats SA gives the overall labour market trends for July/August 2002, based on the official and expanded definition of unemployment respectively. They look at:

- the estimated total number of people in the age category 15-65 years (those of working age),
- the number of people in this age category who were not economically active (for example, full-time students, full-time homemakers, retired people and the disabled who are unable to work),
- those who were economically active (both the employed and the unemployed according to the official definition of unemployment),
- the labour market participation rate (the percentage of all people aged 15-65 years who are economically active), and
- the labour absorption rate (the percentage of all those aged 15-65 years who are actually employed) in July/August 2002.

Table B (based on the official definition) shows that, in July/August 2002, there were an estimated 28,9 million people aged between 15 and 65 years. Among these people:

- 16,3 million were economically active, of whom
 - 11,4 million were employed, and
 - 4,9 million were unemployed.

The unemployment rate (according to the official definition) was estimated to be 30,3%.

¹ See definition of terms

G	Labour market participation rate = $c * 100 / e$	56,4%
H	Labour absorption rate = $a * 100 / e$	39,3%

Table C (based on the expanded definition) on the other hand, shows that among the estimated 28,9 million people aged 15 to 65 years in July/August 2002,

- 19,1 million were economically active, of whom
 - 11,4 million were employed, and
 - 7,7 million were unemployed.

The unemployment rate (according to the expanded definition) was estimated to be 40,3%.

2.6 Household information

One of the purposes of the GHS is to measure development indicators in the country by looking the type of dwellings in which households live, and access to infrastructure, such as piped water, electricity, hygienic toilet facilities, refuse removal and telephones. Comparisons of the results of GHS 2002 to the Census 2001 results are made.

2.6.1 Type of dwelling

Figure 10 indicates the proportion of households in each population group living in formal dwellings¹ in July/August 2002.

- Overall, 73,8% of the households in South Africa lived in formal dwellings in July/August 2002.
- White-headed households had the highest percentage of households living in formal dwellings (99,3%), followed by Indian/Asian- (99,0%), then coloured- (91,7%) and lastly African-headed households (67,0%).

¹ See definition of terms

Figure 10: Proportion of households living in formal dwellings by population group of the household head, July/August 2002

2.6.2 Access to piped water in the dwelling or on site

Figure 11 indicates the proportion of households with access to piped water in the dwelling or on site in July/August 2002.

- The majority of households in South Africa had access to piped water in the dwelling or on site (67,6%).
- The proportion of households with access to water in the dwelling or on site among African-headed households was 59,1%, while for all other groups it was above 90,0%, with the largest proportion among Indian-headed households (99,3%).

Figure 11: Proportion of households in each population group with access to piped water in the dwelling or on site, July/August 2002

Figure 12 indicates that most of the households in South Africa had access to clean water¹ for domestic use, both overall (84,4%) and in all population groups (80,4% for African-headed households and 98,0% for households headed by members of other population groups). On the other hand, the proportion of households using other sources was higher for African-headed households than for households headed by members of other population groups, in both groupings given in the figure.

Figure 12: Distribution of households in each population group by water source, July/August 2002

2.6.3 Access to a hygienic toilet facility²

Figure 13 indicates the proportion of households with access to a hygienic toilet facility in each population group in July/August 2002. Approximately 60,9% of the households in South Africa had access to a hygienic toilet facility. White-headed households had the highest proportion with access to a hygienic toilet facility (99,7%), followed by Indian/Asian- (98,9%), coloured- (88,0%) and then African-headed households (50,5%).

¹ See definition of terms

² See definition of terms

Figure 13: Proportion of households in each population group with access to a hygienic toilet facility, July/August 2002

Figure 14 indicates the distribution of households in each population group by toilet facility.

- Among African-headed households, only 44,6% had access to a flush or chemical toilet (in the dwelling, on site or off site) in July/August 2002, compared with 94,8% of the households headed by other population groups.
- African-headed households had the largest proportion using pit latrines (39,8%), whilst only 2,3% of households headed by other population groups used pit latrines.

Figure 14: Distribution of African-headed households and all other households by toilet facility, July/August 2002

2.6.4 Electricity

Figure 15 gives proportions of households using electricity for cooking, lighting and heating in July/August 2002 by population group of the head of the household. The results indicate that:

- Overall, and within each population group, the majority of households use electricity for lighting.

- However, the proportion of African-headed households using electricity is smaller than of households headed by other population groups, for all three purposes.

2.6.5 Refuse removal

Figure 16 indicates the proportion of households in each population group which have their refuse removed by the local authority in July/August 2002.

- More than half the households in South Africa had their refuse removed by the local authority (56,4%).
- Indian-headed households had the highest proportion with access to this facility (96,2%), followed by white-headed households (90,4%), and then coloured-headed households (81,5%). African-headed households had the smallest proportion with their refuse removed by local authority (47,0%).

2.6.6 Access to a telephone or regular use of a cellular telephone

Figure 17 indicates the proportions of households in each population group with access to a telephone in the dwelling or regular use of a cellular telephone in July/August 2002. Overall, 44,3% of the households in South Africa had access to a telephone in the dwelling or regular use of a cellular telephone: 94,8% of white-headed households, 86,2% of Indian/Asian-headed households, 52,4% of coloured-headed households and 33,9% of African-headed households.

3 Technical notes

3.1 Sample design

A multi-stage stratified sample was drawn using probability proportional to size principles. The first stage is stratification by province, then by type of area within each province. Primary sampling units (PSUs) were then selected proportionally within each stratum (urban or non-urban) in all provinces. Altogether 3000 PSUs were selected. Within each PSU ten dwelling units were selected systematically for enumeration.

The sample was drawn from the master sample, which Statistics South Africa uses to draw samples for its surveys. The master sample is drawn from the database of enumeration areas (EAs), as was established during the demarcation phase of census 1996. As part of the master sample, small EAs consisting of fewer than 100 dwelling units are combined with adjacent EAs to form primary sampling units (PSUs) of at least 100 dwelling units, to allow for repeated sampling of dwelling units within each PSU. The sampling procedure for the master sample involves explicit stratification by province and within each province, by urban and non-urban areas. Independent samples were drawn from each stratum within each province. The smaller provinces were given a disproportionately larger number of PSUs than the bigger provinces.

The master sample is divided into five independent clusters. In order to avoid respondent fatigue, the sample for GHS was drawn from a different cluster from the two clusters already being used for the LFS, which is a twice-yearly rotating panel survey. Altogether 30 000 dwelling units (including units in hostels) were visited for the GHS 2002.

3.2 Weighting the GHS of July/August 2002

A two-stage theoretical weighting procedure was done on the GHS 2002. In the first stage primary sampling units (PSU) are selected with probability proportional to size (PPS) from the census population. The PSU inclusion probability is given by

$$P_{PSU} = \frac{n_{PSU}}{N_{PSU}} . n_s ,$$

where n_{PSU} is the number of households constituting the selected PSU during census fieldwork, n_s is the number of PSUs per stratum, and N_{PSU} is the number of households constituting the selected stratum during census fieldwork. For GHS urban and rural strata were considered. In the second stage dwelling units were selected sequentially from each PSU in the sample to form clusters of ten dwelling units. The household inclusion probability per PSU is given by

$$P_{HH} = \frac{n_{HH}}{H_{HH}} . r_{HH} ,$$

where n_{HH} is the number of selected dwelling units per PSU, H_{HH} is the number of household in the PSU in question at a particular time different from the census time, and r_{HH} is the response rate given by

$$r_{HH} = \frac{n_{RESP}}{n_T} \text{ where } n_{RESP} \text{ is the number of responding households and } n_T \text{ is the total number of visited}$$

households per PSU. The adjusted sample weights are now given by

$$W_{HH} = \frac{1}{P_{PSU} . P_{HH}}$$

Because there were undercounts in some PSUs (because households could not be traced or because of refusals to answer), the weight of each such PSU was adjusted upwards by a factor of n_{HH}/n_{HH}^* where n_{HH} was the number of households which should have been interviewed and n_{HH}^* was the number of households actually reached. Then all household weights were adjusted upwards by a further factor equal to the estimated population at the time of the GHS 2002 survey divided by the 1996 Census population estimate, to account for population growth between the 1996 Census (from which the master sample was drawn) and the date of the survey. These doubly adjusted weights are reported as the household weights in the data set.

The person weights are derived by further adjusting the household weights in order to reproduce the marginal totals of the estimated population at the time of the 2002 GHS by gender, population group, province and age group. A SAS macro called CALMAR was used for this purpose.

The population estimate was derived by a 'bottom up' (cohort-by-cohort) exponential extrapolation from the 1996 and 2001 censuses. Such an estimate is quite reliable for the total population and the gender, population group and provincial subtotals. It is less reliable for the age distribution. Improved population estimates will become available when Statistics South Africa completes its short-term population projection model. The weights in this and other surveys may be modified in the light of model estimates.

3.3 Coverage

The target population is private households in all nine provinces of South Africa and residents in workers' hostels. The survey does not cover other collective living quarters such as students' hostels, old age homes, hospitals, prisons and military barracks.

3.4 Urban and non-urban areas

Even though stratification during sampling was done by type of area – urban and non-urban, analysis based on an urban/non-urban breakdown has not been done, because Stat SA is in the process of investigating the definition of these terms in the light of the new municipal dispensation.

3.5 Confidence intervals

Table D is read as follows. In the row marked RSA and the column labeled 'Estimate' we see that the South African population was estimated at 45,5 million people in July/August 2002. The lower limit of this estimate, within 95% confidence limits, is 44,6 million, while the upper limit is 46,3 million. In other words, we are 95% sure that the actual number of people in South Africa in July/August 2002 was somewhere between 44,6 million and 46,3 million, taking sampling error into account.

3.6 Estimation and use of standard error

The published results of the General Household Survey are based on representative probability samples drawn from the South African population, as discussed in the section on sample design. Consequently, all estimates are subject to sampling variability. This means that the sample estimates may differ from the population figures that would have been produced if the entire South African population had been included in the survey. The measure usually used to indicate the probable difference between a sample estimate and the corresponding population figure is the *standard error (SE)*, which measures the extent to which an estimate may have varied by chance because only a sample of the population was included.

There are two major factors, which influence the value of a standard error. The first factor is the sample size. Generally speaking, the larger the sample size, the more precise the estimate and the smaller the standard error. Consequently, in a national household survey such as the LFS, one expects more precise estimates at the national level than at the provincial 201 level due to the larger sample size involved. The second factor is the

variability between households of the parameter of the population being estimated, for example, the number of unemployed persons in the household.

Figure 18 indicates that:

- the standard error for the employed is 0,0105 (CV) x 11 382 000 (the employed) = 119 511,
- the standard error for the unemployed is 0,0192 (CV) x 4 941 000 (the unemployed) = 94 867,
- the standard error for the economically active is 0,0093 (CV) x 16 323 000 (the economically active) = 151 804, and
- the standard error for the unemployment rate is 0,0140 (CV) x 30,3 (unemployment rate) = 0,42.

Figure 18: Coefficient of variation (CV) by estimate for the employed, the unemployed, the unemployment rate and the economically active (using the official definition of employment), July/August 2002

4 Definition of terms

The population of working age – People aged 15–65 years.

Not economically active population includes people who are not available for work, such as full-time scholars and students, full-time homemakers, those who are retired and those who are unable or unwilling to work.

Economically active population includes people aged 15–65 who are employed and those not employed.

Official and expanded definition of unemployment

Statistics South Africa (Stats SA) uses the following definition of unemployment as its official definition. The *unemployed* are those people within the economically active population who: (a) did not work during the seven days prior to the interview, (b) want to work and are available to start work within a week of the interview, and (c) have taken active steps to look for work or start some form of self-employment in the four weeks prior to the interview. The expanded unemployment rate excludes criterion (c).

Workers include the self-employed, employers and employees.

Formal dwellings include a brick structure on a separate stand, flat or apartment in a block of flats, townhouses, room in backyard and rooms or flatlets.

Informal dwellings include shacks or shanties in informal settlements or in backyards.

Piped water in dwelling or on site – refers to piped water inside the dwelling structure or on site. It excludes water from a neighbour's tap or a public tap that is not on site.

Clean water – refers to piped water (regardless of where) and water from a water tanker.

Electricity for cooking, heating and/or lighting – refers to electricity from public supply.

Hygienic toilet facility – refers to a flush toilet, chemical toilet and a pit latrine with a ventilation pipe.

Access to a telephone or regular use of a cellular phone – refers to a telephone inside the dwelling or a regular use of a cellular telephone.

Urban/ non-urban – see note 3.4 above.

* Other includes coloured, Indian/Asian, white and unspecified population groups. These groups are aggregated due to the small sample size.

For all values of 10 000 or lower the sample size is too small for reliable estimates.

0 = more than nothing but less than 500

Due to rounding numbers do not necessarily add up to totals.
