

REPORT OF THE HOUSEHOLD INCOME & EXPENDITURE SURVEY 2010

**BANGLADESH BUREAU OF STATISTICS
STATISTICS DIVISION
MINISTRY OF PLANNING**

CONTENTS

		Page
Contents		iii-xiv
Foreword		xv
Preface		xvii
Key findings		xix-xxii
Acronyms		xxiii
Exe. Summary		xxv-xxx
Chapter I	Introduction	1-8
1.1	Historical Background	1
1.2	Objectives of the Survey	3
1.3	Sample Design	4
1.4	Training and Field Operation	6
1.5	Survey Operation	6
1.6	Concepts, Definitions and Limitations	6
1.7	Improvements in HIES 2010	7
1.8	Supervision and Quality Control	7
1.9	Data Entry, Programming and Validation	8
Chapter II	Household and Population Characteristics	9-16
2.1	Household Size	9
2.2	Ownership of Land	10
2.3	Housing Condition	11
2.4	Occupation	12
2.5	Age-sex Composition	12
2.6	Marital Status	14
2.7	Different Demographic Ratios	16
Chapter III	Basic Need Indicators	17-25
3.1	Housing Structure	17
3.2	Access to Toilet Facilities	19
3.3	Sources of Drinking Water	21
3.4	Access to Electricity, Telephone/Mobile, Computer, E-mail & Arsenic contamination in water	24-25
Chapter IV	Income and Expenditure	27-43
4.1	Level of Income	27
4.2	Income Distribution	29
4.3	Sources of Income	31
4.4	Consumption Expenditure	33
4.5	Level of Income and Expenditure by Size of Own land in Rural Area	36
4.6	Food Expenditure	38

4.7	Consumption Expenditure by Decile Groups	42-43
Chapter V	Consumption of Food	45-57
5.1	Intake of Food	45
5.2	Intake of Calorie	49
5.3	Intake of Calorie by Food Items	50
5.4	Intake of Protein	54
5.5	Intake of Protein by Food Items	54-57
Chapter VI	Measurement of Poverty	59-75
6.1	Cost of Basic Needs (CBN) Method	59
6.2	Head Count Rate (HCR) Using CBN	60
6.3	Head Count Rate (HCR) by Division	62
6.4	Poverty Gap (PG) and Squared Poverty Gap (SPG)	63
6.5	Incidence of Poverty (CBN) by Size of Household	66
6.6	Incidence of Poverty (CBN) by Age of Head of Household	67
6.7	Incidence of Poverty (CBN) by Selected Household Characteristics	67
6.8	Incidence of Poverty (CBN) by Educational Statistics	69
6.9	Incidence of Poverty (CBN) by Main Occupation of Head of Household and Residence	70
6.10	Incidence of Poverty (CBN) by Ownership of Land	72
6.11	Per Capita Income of the Poor	73
6.12	Per Capita Expenditure of the Poor	74-75
Chapter VII	Education	77-96
7.1	Literacy Rate	77
7.1.1	Sex Variations of Literacy Rates	78
7.1.2	Divisional Variations of Literacy Rates	79
7.2	Level of Education	79
7.2.1	Sex Variations of Level of Education	81
7.3	Types of School Attended	81
7.3.1	Sex Variation of Type of School Attendance	82
7.3.2	Divisional Variation of Type of School Attendance	83
7.4	School Attendance	84
7.4.1	Sex Variation of School Attendance	85
7.5	School Enrollment	86
7.5.1	Sex Variation of Enrolment	87
7.5.2	Divisional Variation of Enrolment	87
7.5.3	Enrolment by Poor and Non-poor Groups (11-15 years)	88
7.5.4	Enrolment of Children (6-10 years) by Poor and Non-poor Groups	89
7.6	Gross Enrolment	91
7.6.1	Sex Variation of Gross Enrolment	91

7.6.2	Divisional Variation of Gross Enrolment	92
7.7	Access to Drinking Water by Educational Attainment of H/H	93
7.8	Household by Extra Disposal Facility and Educational Attainment	93
7.9	Expenditure on Education	94
7.10	Per Capita Income by Level of Education of Head and Sex	95-96
Chapter VIII	Health	97-127
8.1	Population suffering diseases	97
8.2	Diseases Suffered and Average Duration of Ailment	99
8.3	Diseases Suffered during Preceding 30 days	101
8.4	Reasons of Non Treatment	104
8.5	Methods of Treatment	105
8.6	Days Required for Consulting Doctor for the First Time after Ailment	107
8.7	Sources of Medicine	108
8.8	Mode of Payment for Medicine	109
8.9	Means of Travel to the Service/Treatment Providing Personnel	110
8.10	Time Required to Reach the Service/Treatment Providing Personnel	112
8.11	Average Waiting Time	114
8.12	Preference for Particular Treatment Service	116
8.13	Average Time Spared by the Treatment Providers	118
8.14	Sources of Financing Medical Expenses	120
4.15	Services Received by Mothers During Last Pregnancy	121
8.16	Mothers Receiving Medical Checkup within Six Weeks of Their Last Delivery	121
8.17	Attendance Service at the Time of Last Delivery	122
8.18	Patients Reaction Regarding Time Given by the Physician	123
8.19	Motivation for Immunization	123
8.20	Place of Receiving Vaccine	125
8.21	Coverage of Vaccination/Immunization Doses	126
8.22	Medical Expenses	126-127
Chapter IX	Social Safety Nets Programmes	129-135
9.1	Household Receiving Benefits	129
9.2	Average Benefits Received from SSNPs	131
9.3	Distribution of Households Receiving Benefits by Types of Programmes	133
9.4	Percentage of Population by Quarterly Inclusion in SSNPs	134-135

Chapter X	Disability, Migration, Micro credit , Crisis and Crisis Management	137-152
10.1	Disability	137
10.2	Migration and Remittance	143
10.3	Micro credit	147
10.4	Crisis and Crisis Management	150-152
Chapter XI	Selected Community Characteristics	153-164
11.1	Mouza Having Union Council Officials	153
11.2	Main Activities of Mouzas	154
11.3	Main Activities of Women	156
11.4	Selected Government Programmes in the Mouzas	156
11.5	NGO Programmes Operational in the Mouzas	157
11.6	Average Per Acre Production of Selected Crops	158
11.7	Existence of Irrigation System in the Mouza	159
11.8	Existence of Selected Agricultural Activities in the Mouza	160
11.9	Existence of Selected Physical and Social Infrastructure in the Mouza	161
11.10	Existence of Economic and Social Facilities in the Mouza	163
11.11	Natural Facilities Available in the Mouza	163
11.12	Mouzas Affected by Natural Disasters During Last 5 Years	164
Appendix A:	Questionnaire and Management	165-169
Appendix B:	Concept, Definitions and Limitations	171-179
Appendix C:	Poverty Lines and Poverty Measures	181-186
Appendix D:	Standard Errors of CBN Poverty Measures	187-189
Appendix E:	Members Representatives in the Steering/Technical Committee of HIES	191
Appendix F:	Minutes of the discussion meeting on the methodology for estimation of poverty line using (HIES)-2010 data	193
Appendix G:	List of Officials Responsible for Overall Management of HIES 2010	195-198

Appendix H:	Detailed Tables of HIES 2010	
Table No.	Description	page
Table 1:	Distribution of Household, average number of members, earner per household, average monthly income and expenditure per household by monthly household income groups, 2010	201-202
Table 2:	Distribution of Household, average number of members, earner per household, average monthly income and expenditure per household by monthly household per capita income groups, 2010	203-204
Table 3:	Distribution of Household, average number of members, earner per household, average monthly income and expenditure per household by monthly household expenditure groups, 2010	205-206
Table 4:	Distribution of Household, average number of members, earner per household, average monthly income and expenditure per household by monthly household per capita expenditure groups, 2010	207-208
Table 5:	Distribution of Household, average number of members, earners and monthly income per household by monthly household income groups, 2010	209-210
Table 6:	Distribution of Household, average number of members, earners and monthly income per household by monthly household per capita income groups, 2010	211-212
Table 7 :	Distribution of household, average number of members, earners, monthly income and expenditure per household by monthly income groups, 2010	213-214
Table 8 :	Distribution of household, average number of members, earners, monthly income and expenditure per household by monthly per capita income groups,2010	215-216
Table 9 :	Distribution of household, average number of members, earners, monthly income and expenditure per household by monthly expenditure groups, 2010	217-218
Table 10 :	Distribution of household, average number of members, earners, monthly income and expenditure per household by monthly per capita expenditure groups,2010	219-220
Table 11:	Distribution of household and number of members by monthly household income groups, 2010	221-222
Table 12:	Distribution of household and number of members by monthly household per capita income groups, 2010	223-224
Table 13 :	Distribution of household and number of members by monthly household expenditure groups, 2010	225-226
Table 14 :	Distribution of household and number of members by monthly household per capita expenditure groups, 2010	227-228
Table 15:	Distribution of household and number of earners by monthly household income groups, 2010	229-230
Table 16:	Distribution of household and number of earners by monthly household per capita income groups, 2010	231-232
Table 17:	Distribution of household and number of earners by monthly household expenditure groups, 2010	233-234
Table 18:	Distribution of household and number of earners by monthly household per capita expenditure groups, 2010	2235-236

Table 19:	Percentage distribution of household earners and share of income by type of earners and monthly household income groups, 2010	237-238
Table 20:	Percentage distribution of household earners and share of income by type of earners and monthly household per capita income groups, 2010	239-240
Table 21:	Distribution of consumption expenditure of major groups of item by monthly household income groups, 2010	241-242
Table 22:	Distribution of consumption expenditure of major groups of item by monthly household per capita income groups, 2010	243-244
Table 23:	Distribution of consumption expenditure of major groups of item by monthly household expenditure groups, 2010	245-246
Table 24:	Distribution of consumption expenditure of major groups of item by monthly household per capita expenditure groups, 2010	247-248
Table 25:	Distribution of expenditure of major food items by monthly household income groups, 2010	249-260
Table 26:	Distribution of expenditure of major food items by monthly household per capita income groups, 2010	261-272
Table 27:	Distribution of expenditure of major food items by monthly household expenditure groups, 2010	273-284
Table 28:	Distribution of expenditure of major food items by monthly household per capita expenditure groups, 2010	285-296
Table 29:	Distribution of expenditure on fuel & lighting by monthly household income groups, 2010	297-298
Table 30:	Distribution of expenditure on fuel & lighting by monthly household per capita income groups, 2010	299-300
Table 31:	Distribution of expenditure on fuel & lighting by monthly household expenditure groups, 2010	301-302
Table 32:	Distribution of expenditure on fuel & lighting by monthly household per capita expenditure groups, 2010	303-304
Table 33:	Distribution of expenditure on house rent and housing by monthly household income groups, 2010	305-306
Table 34:	Distribution of expenditure on house rent and housing by monthly household per capita income groups, 2010	307-308
Table 35:	Distribution of expenditure on house rent and housing by monthly household expenditure groups, 2010	309-310
Table 36:	Distribution of expenditure on house rent and housing by monthly household per capita expenditure groups, 2010	311-312
Table 37:	Distribution of expenditure on household effects by monthly household income groups, 2010	313-314
Table 38:	Distribution of expenditure on household effects by monthly household per capita income groups, 2010	315-316
Table 39:	Distribution of expenditure on household effects by monthly household expenditure groups, 2010	317-318
Table 40:	Distribution of expenditure on household effects by monthly household per capita expenditure groups, 2010	319-320
Table 41:	Distribution of expenditure on miscellaneous by monthly household income groups, 2010	321-322

Table 42:	Distribution of expenditure on miscellaneous by monthly household per capita income groups, 2010	323-324
Table 43:	Distribution of expenditure on miscellaneous by monthly household expenditure groups, 2010	325-326
Table 44:	Distribution of expenditure on miscellaneous by monthly household per capita expenditure groups, 2010	327-328
Table 45:	Distribution of expenditure on major groups of educational care by monthly household income groups, 2010	329-330
Table 46:	Distribution of expenditure on major groups of educational care by monthly household per capita income groups, 2010	331-332
Table 47:	Distribution of expenditure on major groups of educational care by monthly household expenditure groups, 2010	333-334
Table 48:	Distribution of expenditure on major groups of educational care by monthly household per capita expenditure groups, 2010	335-336
Table 49 :	Monthly per capita consumption of major food items (quantity by monthly) household income groups, 2010	337-354
Table 50 :	Monthly per capita consumption of major food items (quantity) by monthly per capita income groups, 2010	355-372
Table 51 :	Monthly per capita consumption of major food items (quantity by monthly) household expenditure groups, 2010	373-390
Table 52 :	Monthly per capita consumption of major food items (quantity) by monthly per capita expenditure groups, 2010	391-408
Table 53:	Distribution of Household, average number of members, earners per household, average monthly income and expenditure per household by ownership of land in rural area, 2010	409
Table 54:	Distribution of Household, average number of members, earners per household, average monthly income and expenditure per household by operated land in rural area, 2010	410
Table 55 :	Percentage of household according to the monthly household income by ownership of land in rural area, 2010	411
Table 56 :	Percentage of household according to the monthly per capita income by ownership of land in rural area, 2010	412
Table 57 :	Percentage of household according to the monthly household expenditure by ownership of land in rural area, 2010	413
Table 58 :	Percentage of household according to the monthly per capita expenditure by ownership of land in rural area, 2010	414
Table 59 :	Percentage of household according to the monthly household income by operated land in rural area, 2010	415
Table 60 :	Percentage of household according to the monthly per capita income by operated land in rural area, 2010	416
Table 61 :	Percentage of household according to the monthly household expenditure by operated land in rural area, 2010	417
Table 62 :	Percentage of household according to the monthly per capita expenditure by operated land in rural area, 2010	418
Table 63 :	Distribution of consumption expenditure of major groups of item by ownership of land in rural area, 2010	419

Table 64:	Distribution of consumption expenditure of major groups of item by operated land in rural area, 2010	420
Table 65:	Distribution of expenditure of major food items by ownership of land in rural area, 2010	421-423
Table 66:	Distribution of expenditure of major food items by operated land in rural area, 2010	424-426
Table 67 :	Monthly per capita consumption on major food items (qty.in kg) by ownership of land in rural area, 2010	427-429
Table 68 :	Monthly per capita consumption on major food items (qty.in kg) by operated land in rural area, 2010	430-432
Table 69:	Percentage distribution of household according to the type of dwelling unit of the head of household by ownership of land in rural area, 2010	433
Table 70:	Percentage distribution of household according to the type of dwelling unit of the head of household by operated land in rural area, 2010	434
Table 71:	Distribution of household by ownership of computer and e-mail facility by monthly household income groups, 2010	435-436
Table 72:	Distribution of household by ownership of computer and e-mail facility by monthly household expenditure groups, 2010	437-438
Table 73:	Distribution of household by ownership of computer and e-mail facility by level of education of head, 2010	439
Table 74:	Distribution of household by ownership of computer and e-mail facility by broad group of occupation of head, 2010	440
Table 75:	Percentage distribution of household according to the dwelling unit of the head of household, 2010	441
Table 76:	Percentage distribution of household according to the type of dwelling unit of the head of household by size of household, 2010	442
Table 77:	Percentage distribution of household according to the type of dwelling unit of the head of household by income groups, 2010	443-444
Table 78:	Sex wise distribution of head of household, earning status of the members and their contribution of household income by monthly per capita income groups, 2010	445-446
Table 79:	Percentage distribution of household according to the type of dwelling unit of the head of household by expenditure groups, 2010	447-448
Table 80:	Percentage distribution of household according to the type of dwelling unit of the head of household by per capita expenditure groups, 2010	449-450
Table 81:	Sex wise distribution of head of household, earning status of the members and their contribution of household income by monthly per capita income groups, 2010	451-452
Table 82:	Sex wise distribution of head of household, earning status of the members and their contribution of household income by monthly per capita expenditure groups, 2010	453-454
Table 83:	Percentage distribution of household according to religion by monthly per capita income groups, 2010	455
Table 84:	Percentage distribution of household according to religion by monthly per capita expenditure groups, 2010	456
Table 85:	Distribution of household, average numbers, average monthly income and expenditure per household by religion,2010	457

Table 86:	Distribution of household, average no. of member per household, average monthly income and expenditure by decile of households based on monthly household income, 2010	458
Table 87:	Distribution of household, average no. of member per household, average monthly income and expenditure by decile of households based on monthly household expenditure, 2010	459
Table 88:	Distribution of household, average no. of member per household, average monthly income and expenditure by decile of households based on monthly household per capita income, 2010	460
Table 89:	Distribution of household, average no. of member per household, average monthly income and expenditure by decile of households based on monthly household per capita expenditure, 2010	461
Table 90:	Percentage distribution of average household consumption expenditure by major groups and decile of households based on monthly household income, 2010	462
Table 91:	Percentage distribution of average household consumption expenditure by major groups and decile of households based on monthly household expenditure, 2010	463
Table 92:	Percentage distribution of average household consumption expenditure by major groups and decile of households based on monthly household per capita income, 2010	464
Table 93:	Percentage distribution of average household consumption expenditure by major groups and decile of households based on monthly household per capita expenditure, 2010	465
Table 94:	Distribution of literate population 5 years and above by age, sex and residence, 2010	466-467
Table 95:	Distribution of population 5 years and above by level of education, sex and residence, 2010	468
Table 96:	Distribution of population 5-29 years who are currently attending school by level of education, 2010	469-470
Table 97:	Distribution of students 5-29 years by age and the expenditure incurred annually by them for education by item of expenditure and sex of student, 2010	471-472
Table 98:	Distribution of population who suffered from some sorts of illness in the preceding 30 days by type of diseases, 2010	473-475
Table 99:	Distribution of population by diseases suffered in the last 12 months and average duration of ailment, 2010	476-477
Table 100:	Percentage distribution of population by their chronic illness in the preceding 12 months by type of illness, age group and sex, 2010	478-483
Table 101:	Distribution of patients by method of treatment and sex, 2010	484
Table 102:	Distribution of patients by their source of getting medicine and sex, 2010	485
Table 103:	Distribution of patients by source and means of getting medicine and sex, 2010	486
Table 104:	Distribution of patients by their average days required consulting doctor for the first time after ailment by age group and sex, 2010	487-488
Table 105:	Reason of non-treatment in the ailment suffered in the preceding 30 days, 2010	489

Table 106:	Distribution of mother who received medical checkup within six weeks of her last delivery by place of checkup, 2010	490
Table 107:	Distribution of mother who received service during her pregnancy by type of service centre, 2010	491
Table 108:	Distribution of mother by place of delivery, 2010	492
Table 109:	Distribution of patients by their average waiting time for getting the service/treatment personnel, 2010	493-494
Table 110:	Patients response regarding time spared by treatment provider for the patient, 2010	495-496
Table 111:	Patients per capita expenditure by items of expenditure (preceding 30 days), 2010	497
Table 112:	Means of reaching to the service/treatment personnel by the patient, 2010	498-499
Table 113:	Time required to reach the service/treatment personnel (in case of doctors visit to the residence, time will be considered after giving call), 2010	500-501
Table 114:	Coverage of immunization doses for children 0-5 by sex, 2010	502
Table 115:	Distribution of children aged 0-5 by type of vaccination received by them, 2010	503
Table 116:	Distribution of vaccinated children by their last place of receiving that vaccine, 2010	504
Table 117:	Distribution of children by means of their motivation for immunization, 2010	505
Table 118:	Means of meeting the medical expenditure by the patients, 2010	506
Table 119:	Preference of service/treatment by the reason, 2010	507
Table 120:	Patient's reaction regarding time given by the attending physician by the age of patients, 2010	508-509
Table 121:	Distribution of mothers by type of attendant service received at the time of her last delivery, 2010	510
Table 122:	Distribution of population according to sex and residence by age group, 2010	511
Table 123:	Percentage distribution of population according to marital status and residence by broad age group, 2010	512
Table 124:	Percentage distribution of population according to religion and residence by broad age group, 2010	513
Table 125:	Percentage distribution of population (7 years and above) according to educational attainment by age group and residence, 2010	514-517
Table 126:	Percentage distribution of head of household according to educational attainment by sex and residence, 2010	518
Table 127:	Percentage distribution of household according to sex of head of household, number and size of room by monthly per capita expenditure groups, 2010	519-520
Table 128:	Percentage distribution of household according to sex of head of household, number and size of room by monthly per capita income groups, 2010	521-522
Table 129:	Percentage distribution of household according to source of drinking water and residence by monthly household income groups, 2010	523
Table 130:	Percentage distribution of household according to source of drinking water and residence by educational attainment of the head of household, 2010	524

Table 131:	Percentage distribution of household according to source of drinking water and residence by size of land owned in acre, 2010	525
Table 132:	Percentage distribution of household according to excreta disposal facility and residence by monthly household income groups, 2010	526
Table 133:	Percentage distribution of household according to excreta disposal facility and residence by educational attainment of the head of household, 2010	527
Table 134:	Distribution of average number of adult children by sex and monthly per capita income groups by residence, 2010	528-529
Table 135:	Distribution of average number of adult children by sex and monthly per capita expenditure groups by residence, 2010	530-531
Table 136:	Percentage distribution of household according to educational attainment of male head of households and per capita income groups by residence, 2010	532-533
Table 137:	Percentage distribution of household according to educational attainment of male head of households and per capita expenditure groups by residence, 10	534-535
Table 138:	Percentage distribution of household according to educational attainment of female head of households and per capita income groups by residence, 2010	536-537
Table 139:	Percentage distribution of household according to educational attainment of female head of households and per capita expenditure groups by residence, 2010	538-539
Table 140:	Average monthly per capita income of household according to educational attainment of head of households by per capita income groups by residence, 2010	540-541
Table 141:	Average monthly per capita expenditure of household according to educational attainment of head of households by per capita expenditure groups by residence, 2010	542-543
Table 142:	Average number of persons (7 years and above) according to educational attainment and classified by per capita income groups by residence, 2010	544-545
Table 143:	Average number of persons (7 years and above) according to educational attainment and classified by per capita expenditure groups by residence, 2010	546-547
Table 144:	Average monthly per capita income of household according to educational attainment of head of household by per capita income groups by residence, 2010	548-549
Table 145:	Average monthly per capita income of household according to educational attainment of head of household by per capita expenditure groups by residence, 2010	550-551
Table 146:	Average monthly per capita income of household according to educational attainment of male head of household by per capita income groups by residence, 2010	552-553
Table 147:	Average monthly per capita expenditure of household according to educational attainment of male head of household by per capita expenditure groups by residence, 2010	554-555
Table 148:	Average monthly per capita income of household according to educational attainment of female head of household by per capita income groups by residence, 2010	556-557

Table 149:	Average monthly per capita expenditure of household according to educational attainment of female head of household by per capita expenditure groups by residence, 2010	558-559
Table 150:	Percentage distribution of population according to per capita income and per capita expenditure groups and by residence, 2010	560-563
Table 151:	Distribution of average monthly per capita income according to per capita income and per capita expenditure groups by residence, 2010	564-567
Table 152:	Distribution of average monthly per capita expenditure according to per capita income and per capita expenditure groups by residence, 2010	568-571
Table 153:	Distribution of sample households according to per capita income and per capita expenditure groups by residence, 2010	572-575

Foreword

I am delighted to learn that the Bangladesh Bureau of Statistics (BBS) has successfully completed the Household Income and Expenditure Survey (HIES), 2010 very efficiently. I congratulate BBS for compiling the Final Report of the Household Income and Expenditure Survey (HIES)-2010 within the schedule time.

HIES has been providing data for estimating poverty and other socio-economic characteristics prevailing in the country since 1973-74. The uniqueness of the HIES is collection of year round data in order to eliminate seasonal variations in income, expenditure and consumption in a year. In determining the poverty line, the Cost of Basic Needs (CBN) approach has been used. This will give the users an opportunity for comparison of data series over time.

I would like to thank the Director General, BBS and his team for completing the assignment diligently and timely.

I am grateful to the chairperson and the members of the technical committee for their valuable support and guidance in ensuring quality of the report.

I would also like to take this opportunity to thank the World Bank for there technical and financial support they have extended for conducting this report.

Any suggestion for further improvement of this report will be highly appreciated.

December, 2011

(Riti Ibrahim)
Secretary
Statistics Division

Preface

Bangladesh Bureau of Statistics (BBS) has been conducting the Household Income and Expenditure Survey (HIES) on a regular basis as the core survey to provide with very important data like income, expenditure, consumption and poverty situation. The first round of HIES was conducted in the Year 1973-74 in the independent Bangladesh. Since then, including the latest survey in 2010, BBS has successfully completed 15 rounds of HIES. The HIES data series generated by the BBS is considered to be the main data source for estimation of poverty and its correlates in Bangladesh.

The present report is based on the final data sets of HIES 2010. A two-stage sample design was adopted for the survey. HIES-2010, 612 PSUs were selected systematically from 16 strata as a subset of IMPS design. The sample size was 12,240 households where 7,840 were from rural area and 4,400 from urban area. A number of innovative techniques were adopted in the survey operation and also in methodology for conducting HIES 2010. Data collection and data entry were done in the field level and for this purpose each survey team was provided with a laptop computer. Data were sent to HQ office through internet. These new techniques helped improving the data collection and data entry processes to a great extent and also facilitated to compile the Final results quickly. Another important feature in HIES 2010 is the inclusion of four separate sub-modules in the questionnaire relating to Disability, Micro-credit, Migration & Remittance and Crisis and Crisis Management. For estimating incidences of poverty in 2010, the poverty line of 2005 were inflated with constant prices using price indices.

I appreciate the Technical and Financial Assistance of the World Bank (WB) in conducting the HIES 2010. Particularly, Mr. Nobuo Yoshida, Senior Economist, Mr. Faizuddin Ahmed, Consultant, WB and Ms. Ananya Basu, Senior Economist, South Asian Region of the WB and Ex. Task Team Leader of HIES, rendered valuable contributions in processing and analysis of data.

I express my sincere thanks to Professor Dr. Wahid Uddin Mahmood chairperson of the technical committee, Mr. Fakrul Ahsan, Division Chief, GED, Planning Commission and Dr. M.K Mujeri, Director General, BIDS for final review and editing of the report.

This final report is prepared by a team led by Mr. Md. Zahidul Hoque Sardar, Project Director, HIES, who was actively assisted by Mr. Abdur Rashid Sikder, Ex. Deputy Director General, BBS, Mr. Md. Shamsul Alam, Director, BBS. The data processing, data cleaning and tabulation of the survey was done by Mr. Abdul Baten, Consultant, HIES, who was actively assisted by Mr. A.K.M Tahidul Islam, Deputy Director, BBS, Mr. Rezaul Karim, Programmer, BBS, Mr. Dinesh Chandro Roy, Assistant Programmer, HIES, Mr. Firoz Ahmed Sarder, Assistant Statistical Officer and Mr. Md. Saidur Rahman, Assistant Statistical Officer, BBS for their assistance for preparing the Final Report.

Suggestions and comments on the report are most welcome.

December, 2011

Md. Shahjahan Ali Mollah
(Additional Secretary)
Director General
Bangladesh Bureau of Statistics

KEY FINDINGS

Key Findings	HIES 2010			HIES 2005		
	Total	Rural	Urban	Total	Rural	Urban

Household Income and Expenditure Survey 2010

Executive Summary

This report presents final results from the fifteenth round of the Household Income and Expenditure Survey (HIES) conducted by Bangladesh Bureau of Statistics. The key finding from HIES 2010 is that the standard of living of the population in general has improved very significantly in recent years. This is reflected in reduced incidence of poverty with stability in the distribution of income and expenditure; increased nutrition from a more diversified food consumption basket; and higher level of living in terms of non-food indicators.

Survey period, sample size and new modules in the questionnaire: The survey was carried out during February 2010 – January 2011. The 2010 HIES covers 12,240 households, drawn from 612 Primary Sampling Units (PSUs), from 16 strata - 6 rural, 6 urban, and 4 Statistical Metropolitan Areas. Compared to the 2005 HIES, this round shows an increase of 21.43% in terms of PSUs and households. In addition to the modules canvassed in 2005, four additional modules were introduced in 2010: (1) Disability (2) Migration and Remittances (3) Micro Credit and (4) Crisis & Crisis Management.

Poverty: Based on the upper poverty line, in HIES-2010 incidence of poverty is estimated at 31.5 percent at the national level, 35.2 percent in rural area and 21.3 percent in urban area. In 2005, these rates were 40.0 percent at the national level, 43.8 percent in rural area and 28.4 percent in urban area. Poverty has declined by 8.5 percentage points (approximately 1.7 percent per annum) at national level, 8.6 percentage points in rural area and 7.1 percentage points in urban area during 2005 to 2010.

Poverty Head Count Rate (percent) in 2010 and 2005

Residence	Upper Poverty Line		Lower Poverty Line	
	2010	2005	2010	2005
National	31.5	40.0	17.6	25.1
Rural	35.2	43.8	21.1	28.6
Urban	21.3	28.4	7.7	14.6

Division level breakdowns of poverty estimates: The estimates of Head Count Rates by Divisions using the upper poverty lines from the 2010 HIES 2010 reveals that, Rangpur Division has the highest incidence of poverty (HCR) at 46.2%, followed by Barisal Division 39.4% and Khulna division 32.1%. On the other hand, Chittagong Division has recorded the lowest HCR of incidence of poverty at 26.2%, followed preceded by Sylhet Division 28.1% and Rajshahi Division (New) 29.8%.

Poverty by sex of head of household: Poverty incidence is found to be significantly less for female-headed households than that for male-headed ones. Using the upper poverty line, the HCR of incidence of poverty is 32.1% for the male heads where, 26.6% for the female heads. While differences by religion are relatively slight, size of landholdings and educational attainment are negatively correlated with poverty incidence, as might be expected.

Depth and severity of poverty: The depth and severity of poverty have also declined. Using the lower poverty line, Poverty Gap (depth) has declined from 4.6 percent in 2005 to 3.1 percent in 2010 and the squared poverty gap (severity) has declined from 1.3 percent in 2005 to 0.8 percent in 2010.

Food and Nutrition: Per capita per day intake of food items has increased by 5.4 percent to 1000.0 grams in 2010 from 947.8 grams in 2005 at the national level. The rates of increase in rural and urban areas are 6.13 percent and 3.37 percent respectively in 2010 relative to 2005. The average quantity of rice intake (fine, medium and coarse combined) decreased to 416.0 grams in 2010 from 439.64 grams in 2005 at the national level. But consumption of wheat (wheat flour and maida) increased to 26.0 grams in 2010 from 12.08 grams in 2005. Per capita per day intake of potato increased to 70.13 grams in 2010 from 63.30 grams in 2005. Consumption of vegetables, fruits, chicken/duck, onion, food taken outside and miscellaneous items also increased in 2010 relative to 2005.

The overall calorie intake per capita per day increased by 3.56 percent to 2318.3 K.cal in 2010 from 2238.5 K.Cal in 2005. It increased by 4.06 percent in rural and 2.3 percent in urban areas. Per capita per day protein intake (in grams) has significantly increased in 2010, although it did not change in last two surveys (2005 and 2000). At national level, it has increased to 66.26 grams per capita per day in 2010 from 62.52 grams per capita per day in 2005. Per capita per day protein

intake has increased to 66.24 grams in 2010 from 61.74 in 2005 in rural areas. In urban areas, the same increased to 69.11 grams in 2010 from 64.88 grams in 2005.

Level of Living: The quality of life appears to have improved. The overall housing condition has improved in 2010 relative to 2005. In 2010, at national level, 25.12 percent of the households reported to have used brick/cement in the walls of main dwelling structure, compared with 19.63 percent in 2005. Use of brick/cement has increased both in rural and urban areas. Use of hay/straw/bamboo/leaves as wall materials has decreased substantially. Access to safe sources of drinking water also improved. About 10.62 percent households use supply water as against 7.63 percent in 2005. At the national level 56.62 percent households reported to have tested presence of arsenic contamination in their tube-wells. Of these only 7.32 percent household found the result to be positive.

Access to electricity and mobile phones has increased remarkably. Households with access to electricity increased to 55.26 percent in 2010 from 44.23 percent in 2005. In rural areas, it increased to 42.49 percent in 2010 from 31.19 percent in 2005 and in urban areas it increased to 90.10 percent in 2010 from 82.61 percent in 2005. A phenomenal increase is observed in case of mobile phone use. It has increased to 63.74 percent in 2010 from a meager 11.29 percent in 2005. This increase pervaded both rural and urban areas. Over 56.7 percent households in rural area have reported its use in 2010 as against 6.05 percent in 2005. In urban area its use has increased to 82.74 percent in 2010 from 26.73 percent in 2005.

Income and consumption inequality: The concentration of income has slightly decreased. The Gini co-efficient of income decreased to 0.458 from 0.467 in 2005. Incomes accruing to households belonging to Decile-1 to Decile-5 are recorded at 2.00 percent, 3.22 percent, 4.10 percent, 5.00 percent and 6.01 percent respectively at national level in 2010. These shares have not changed relative to 2005. These five deciles continue to share only 20.33 percent of total income, although they comprise 50 percent of the population.

The distribution of consumption expenditure has been stable. The Gini co-efficient of consumption expenditure is estimated at 0.321 in 2010 at national level, compared to 0.332 in 2005. There are very slight changes in the percentage shares of consumption expenditures in the deciles relative to those of 2005 round of survey. Deciles 1 to 6 have almost similar shares of consumption expenditures, deciles 7 to 9 have gained slightly and the share of decile 10 declined slightly.

Several factors are likely to have contributed to declining poverty and generally improving level of living during 2005-10: Some of the indicative ones are briefly described below, and their correlations with poverty will be explored through further analysis. These have been obtained from the new modules added to the 2010 HIES, and will be examined in greater depth in the near future.

Income growth: The average monthly household income in 2010 is estimated at Tk. 11,479 at the national level, Tk. 9,648 in rural area and Tk. 16,475 in urban area. In 2005, the same was Tk. 7,203 at the national level, Tk. 6,095 in rural area and Tk. 10,463 in urban area. Average nominal income increased by 59.38 percent at the national level, 58.27 percent in rural area and by 57.48 percent in urban area in 2010 relative to 2005. Real incomes grew by 15 percent at the national level, 13 percent in rural areas and 14 percent in urban areas. Such increases over a five year period are indeed small and this primarily reflects significant under-reporting of income. It is therefore useful to look at the expenditure side as well.

Expenditure level: In 2010, the average monthly household expenditure is estimated at Tk. 11,200 at the national level, Tk. 9,612 in rural area and Tk. 15,531 in urban area. In 2005 the same was Tk. 6,134 at the national level, Tk. 5,319 in rural area and Tk. 8,533 in urban area. In nominal terms, it increased by 82.59 percent at the national level, 80.71 percent in rural area and by 82.01 percent in urban area relative to 2005. Real expenditure increased by 38.1 percent at the national level, 35.6 percent in rural areas and 38.6 percent in urban areas.

Remittance: Remittances significantly boost income, consumption and saving at the household level. In all divisions, income, consumption and saving per household of remittance receivers far exceed that of households who do not receive remittances. For the remittance receiving households in 2010, income per month is on average 82 percent higher, consumption per month is 37.7 percent higher and saving per month is 107 percent higher relative to households who do not receive remittances.

Poverty headcount rates of remittance receiving households are 61 percent lower than the poverty headcount rate of households who do not receive remittances. Only 13.1 percent of the remittances receiving households were below the poverty line in 2010, compared with 33.6 percent for non-receiving households and 31.5 percent national average poverty incidence.

Earlier, HIES 2005 revealed that the poverty amongst remittance receivers was 17 percent compared with 42 percent for households not receiving remittances.

Demographic Trends: The average size of household has continued to decrease. It has declined from 4.84 in 2005 to 4.5 in 2010. The demographic dependency ratio of population in 2010 is estimated at 65.3 at the national level. In 2005, this was 77.5. In the rural areas, the demographic dependency ratio is estimated at 78.1 in 2010 compared with 82.2 in 2005. In the urban areas, the demographic dependency ratio decreased from 61.1 in 2005 to 60.3 in 2010.

Education: Access to education has increased. Literacy rate of population aged 7 years and over stands at 57.91 percent at national level, compared with 51.9 percent in 2005. In rural area, literacy rate in 2010 was 53.37 percent, compared with 46.7 percent in 2005. In urban area, literacy rate was 70.38 percent in 2010, compared with 67.6 percent in 2005. In 2010, enrolment rate of children aged 6-10 years for both sexes at the national level was 84.75 percent, compared with 80.38 percent in 2005. The enrolment rate for girls is higher than that of the boys in both rural and urban areas.

Crisis and Crisis Management: Only 0.84% of the 2010 HIES households faced any kind of crisis during the last 12 months preceding enumeration - 0.30% in urban areas and 1.03% from rural. The most common types of crisis are drought/irregular rains, floods, and excessive crop diseases/pests. When crisis hit, 35.43% of households coped using previous savings, 16.54% by getting help from friends and relatives, and 14.68% by taking loans. No household reported reducing health and education expenditures.

Safety Nets: The proportion of people benefiting from at least one public safety net program has increased. In 2010, 24.57 percent of the households reported to have received benefit during the last 12 months from at least one type of program. In contrast, only 13.06 percent households reported to have received benefit from SSNP in 2005. In rural area 30.12 percent households received benefits from SSNP as against 15.64 percent households in 2005. There was similar increase in urban areas. Survey findings indicate that the SSNP have been widened substantially both in coverage and amount during the period 2005 to 2010.

The findings further affirm that SSNPs are reasonably well targeted. Poverty incidence of the beneficiaries of SSNPs is 43.4 percent overall, compared with 27.5 percent poverty incidence of population not included in the SSNPs. However, the poverty incidence of population not included in SSNPs in Rangpur 37.6 percent and Barisal 33.5 percent are higher than national average poverty incidence. SSNPs are therefore reaching the poor but not all the poor everywhere

Disability: The net percentage of population suffering from any type of disability is about 9.07% - 8.13% for males and 10.00% for females. The proportion of disabled in rural areas is 9.63%, and in urban areas is 7.49%. The most common disability is reported to be some difficulty related to eyesight. As may be expected, disabilities tend to increase with age, in general.

Migration: About 12.28% of the 2010 HIES households reported any kind of migration either within the country or abroad. Of these, 8.60% households reported migration abroad. The proportion of migration from rural areas is higher than that from urban areas. Most migrants are in the 25-44 age-group, and are overwhelmingly male.

Micro credit: In the 2010 HIES, 32.03% of the households received loans from financial or non-financial institutions, friends, money lenders, etc. during the last 12 months preceding the day of enumeration. The proportion is higher in rural areas (35.08%) than in urban areas 23.70%. On the other hand, 14.51% of the households reported depositing money in any micro-finance or financial institution, while 5.64% reported depositing money for saving in any informal financial institution such as local co-operatives, clubs, etc. The key sources of loans are Grameen Bank (21.11%), ASA (18.37%), and other NGOs 14.29%. The primary reasons for taking loans are Business 23.73%, followed by Agriculture 21.09%. The average amount of loan taken per reporting household is Tk. 28,062 at the national level, while it is Tk. 21,804 in rural areas and Tk. 54,122 in urban areas.

CHAPTER-I

INTRODUCTION

Household Income and Expenditure Survey (HIES) is one of the core activities of the BBS; it contains a wide range of socio-economic information at the household level that has strong influence in the decision making process for the government. It is widely used across the world, particularly in the low income developing countries, for assessing poverty level and the living standard of the people at large. Considering its importance, the national governments and the international agencies have been striving for the improvement of survey methodology and to establish of HIES technical standard.

This survey provides valuable data on household income, expenditure, consumption, savings, housing condition, education, employment, health and sanitation, water supply and electricity, etc. The survey data can also be used for compilation of national accounts of the household sectors, analysis of poverty situation and other information on household related characteristics. It also provides the weights for computation of Current Price Index (CPI). It becomes the main data source for preparation of the Poverty Reduction Strategy (PRS) and Five Year Plan (FYP). It is also used for monitoring the progress of poverty reduction and the Millennium Development Goals (MDGs) indicators.

1.1 Historical Background

As statistical tool, the Household Expenditure Survey is practiced over hundred years. It can be traced back to 1857, when Ernst Engel first collected data on 153 Belgian family budgets from a group of homogeneous families in respect of taste and prices of commodities they used and that encouraged him to formulated a law that, the percentage of expenditure on food is on the average follows a decreasing function of income.

In 1904 another inquiry was made by the British Board of Trade on 2000 families of wage earners in urban areas in England. In 1920s and 30s such family budget surveys were conducted in several industrial areas in India to provide weights for construction of cost of living index numbers. The first family budget survey was conducted in Japan in 1925 covering 4785 households. Thus, during the early part of the 20th century, this sort of survey spreaded over many parts of the world covering various sections of population.

Household Expenditure Survey (HES) was first conducted in our part of the world, now comprising Bangladesh, during the mid fifties. The geographical coverage of that survey was only limited to four selected cities of the country. In an attempt to provide the national estimates, coverage of the survey, thereafter, was extended to rural areas.

After independence, Household Expenditure Survey was first carried out in 1973-74 and the result was published in two volumes. HES data collected for the years 1974-75 and 1975-76 were not published. Some selected tables of the surveys 1976-77, 1977-78 and 1978-79 were published in the Statistical Yearbooks of 1980, 1982 and 1983-84 respectively. Detailed reports could not be published due to delay in data processing. In HES 1981-82 provision was made to collect data on several socio-demographic characteristics to correlate consumption and expenditure pattern with different segments of population. Since 1973-74 up to 1981-82 data were collected using recall method.

A combination of both recall and diary methods were introduced during HES 1983-84. For this purpose, two types of schedules were introduced. One was called “Diary” to collect data on food and beverage consumed by the household on daily basis for one month by locally recruited person designated as “Diary Keeper”. The other was called “Schedule” to collect non-food expenditure with varying reference period by the BBS field staff at the end of the month. Almost similar methodology was followed in the subsequent surveys held during 1985-89, 1988-86, 1991-92 and 1995-96.

In the latest Household Income and Expenditure Survey (HIES) conducted in 2010, many of changes have been introduced in the methodology in order to improve the quality of data. In addition, 4 additional modules were added. These are; crises and coping measures, micro-credit, migration and remittance and disability. This is the third survey in which almost instant data entry was done using laptop in each sample area. In the HIES-2010 a team based approach was taken in the data collection and data entry. As many as 34 teams engaged across the country for field operation. Each team consisted of two enumerators cum data entry operators, one supervisor and 2 female facilitators. Female facilitators were recruited from the resident of the area where enumeration was taken place. Her task was to ease the work of the enumerators. Engagement of female enumerators yield very effective results as access to the household became easier for collection of data; particularly of food consumption data from the

housewife of the sample household. Each team was provided with a laptop to make data entry at the field level. Therefore, data collection and data entry were done almost simultaneously at the field. All the survey teams were supplied with an internet modem to send data to the headquarters. Thus, data of the previous month were sent to Dhaka Head Office through Internet within the 7th of the following month. This was a significant improvement over the other previous HIES surveys by making the best use of ICT technology for quick data transfer.

Since 2000 HES, emphasis was given for collect information on income in addition to expenditure and consumption. Besides, in 2010 HIES, the questionnaire included more comprehensive coverage of different income sources of households compared to earlier rounds. Therefore, 2005 HIES can truly be termed as proper Household Income and Expenditure Survey (HIES-2005). This nomenclature is also followed in 2010. In HIES-2010, a separate module on Social Safety Nets Programmes (SSNP) was used as was done in HIES 2005. In 1995-96 survey, a separate module was also used to collect data on the community in the rural PSU. Data Entry Program had the provision of detecting validity and consistency errors in the data. In case of the 2010 survey, there was scope of data correction at field level by revisiting PSUs by field supervisors, if any case of there detection of error by the data entry program.

1.2 Objectives of the Survey

The main objectives of HIES 2010 were to:

- Obtain detailed data on household income, expenditure and consumption.
- Determine poverty profile with urban and rural breakdown.
- Provide information about standard of living and nutritional status of the population.
- Provide data to determine the weights of Consumer Price Indices (CPI).
- Provide household level consumption data for compiling national accounts estimates.
- Provide detailed information on health status and educational level of the population.
- Determine poverty estimates by administrative divisions and detailed socio-economic characteristics of the population and household.
- Provide benchmark data for formulation of appropriate policy for poverty reduction, improvement in standard of living and nutritional status of the population.
- Provide relevant data for monitoring of the Poverty Reduction Strategy (PRS), Five year plan and the Millennium Development Goals (MDGs).
- Provide data on type, volume and distribution of resources under different Social Safety Nets Programmes (SSNP).
- Provide data on disability, migration, remittances, microcredit and disasters management.

1.3 Sample Design

A two stage stratified random sampling technique was followed in drawing sample of HIES 2010 under the framework of Integrated Multipurpose Sample (IMPS) design developed on the basis of the sampling frame based on the Population and Housing Census 2001. The IMPS design consisted of 1000 Primary Sampling Units (PSUs) throughout the country. There were 640 rural and 360 urban PSUs in the sample. The PSU was defined as contiguous two or more enumeration areas (EA) used in Population and Housing Census 2001. Each PSU comprised of around 200 households. In the first stage about one half, 612 is in exact out of total 1000 IMPS PSUs, were drawn. These PSUs were selected from 16 different strata. There were 6 rural, 6 urban and 4 SMA strata. In the second stage, 20 households were selected from each of the rural PSUs and also PSUs located in the municipal areas and SMAs. Thus, the HIES is a sub-set of IMPS.

According to the sample design, the survey has completed in one complete year (1st February, 2010 to 31st January, 2011). This has been done in order to capture the seasonal variations in a cycle of one year in income, expenditure and consumption pattern. This entire period of one year has been divided into 18 terms. In each term a total of 34 PSUs are covered to collect data from a total of 680 sample households. In HIES-2010, 12240 households were selected where 7840 from rural area and 4400 from urban area. The number of sample PSUs, Households and Population covered in HIES-2010 next table.

Number of Sample PSUs, Households and Population covered in HIES-2010 by Residence

Division	Number of Sample PSUs, Households and Population 2010		
	National	Rural	Urban
1	2	3	4
Sample PSUs			
Total	612	392	220
Barisal	49	34	15
Chittagong	110	71	39
Dhaka	177	105	72
Khulna	90	55	35
Rajshahi (Former)	143	94	49
-Rajshahi (New)	79	49	30
-Rangpur	64	45	19
Sylhet	43	33	10
Sample Households			
Total	12240	7840	4400
Barisal	980	680	300
Chittagong	2200	1420	780
Dhaka	3540	2100	1440
Khulna	1800	1100	700
Rajshahi (Former)	2860	1880	980
-Rajshahi (New)	1580	980	600
-Rangpur	1280	900	380
Sylhet	860	660	200
Sample Population			
Total	55580	35894	19686
Barisal	4464	3107	1357
Chittagong	10943	7201	3742
Dhaka	15658	9383	6275
Khulna	7673	4666	3007
Rajshahi (Former)	12138	7867	4271
-Rajshahi (New)	6607	4038	2569
-Rangpur	5531	3829	1702
Sylhet	4704	3670	1034

It may be mentioned that Rangpur Division has been created by the Government after the sample selection was finalized for HIES 2010. Originally this Division was a part of Rajshahi Division and as it existed before creation of Rangpur Division. In order to fulfill the requirement of planning and administration of this newly created Division, it has been decided to tabulate the data separately for both Rajshahi and Rangpur Divisions as exist at present and at the same time also tabulate the data for the former Rajshahi Division as per original sample design to meet the requirement of comparability with the previous HIES.

1.4 Training and Field Operation

Enumerators, data entry operators and the supervisors were given detail training on the survey before the field operation. There were 36 (including two reserve) enumeration teams for the survey. Each enumeration team was comprised of a supervisor, 2 enumerator cum data entry operators and two female facilitators. This team of five members was assigned to 1 PSU to collect data for a continuous period of 20 days.

During this period, for collecting information on food consumption, the households were divided into two groups each consisting of 10 households. Each enumerator collected information on food consumption of the households for 14 days by paying 7 visits. Information on food consumption of previous two days were collected during each visit.

This time refresher training was organised for enumerators cum data entry operators, supervising officers and divisional co-ordinators after completion of the first round of data collection. The problems identified by the enumerators cum data entry operators during data collection and data entry, were discussed in the refresher training and the possible solutions were given. This resulted in the improvement of the data quality in the subsequent rounds of the survey.

1.5 Survey Operation

Detail description of survey management, survey questionnaire, training, field test, staffing and organization of field work are annexed (Appendix-A).

1.6 Concepts, Definitions and Limitations

Concepts and definitions used in Household Income and Expenditure Survey-2010; problems and limitations encountered in the survey have been described and annexed (Appendix-B).

1.7 Improvements in Household Income and Expenditure survey-2010

The following measures were taken in order to ensure quality and increase coverage of Household Income and Expenditure Survey-2010 data.

- Data capturing in the sample area using laptop with the help of an improved data entry software.
- Data entry program was designed to detect inconsistencies and errors in data at data entry stage and made way to correct data by revisiting the relevant sample households at data collection stage.
- Refreshers training were conducted after 1st round of data collection.
- Correction of data through instant field visit by supervisors during data entry period.
- Data were transferred to HQ through Internet.
- Sample size has been significantly increased in HIES-2010 for robustness of the findings as well as to enhance reliability.
- The aforementioned measures and adoption of technologies helped BBS to publish HIES 2010 report in much shorter time span compared to previous surveys

1.8 Supervision and Quality Control

Strong supervision and quality control measures were adopted in HIES 2010. As mentioned earlier, there were 34 teams, each team comprising of 2 enumerators-cum data entry operators and two female facilitators and one supervisor. In order to improve the quality of data collection, 34 supervisors were appointed to supervise the work of 34 teams. The Regional Statistical Officers from 23 Regional Statistical Offices and 11 Statistical Officers/Assistant Statistical Officer from the HQ were engaged as supervisors. In addition, 2 Supervisors and 4 enumerators were kept reserve for addressing emergencies. Thus, the number of enumerators and supervisors were in fact 70 and 36 respectively. There were also eight Divisional coordinators to supervise and coordinate the activities of the enumerators and supervisors in their respective divisions. Thus, each team was composed of 5 members; 2 enumerators/cum data entry operators, 2 female facilitators and 1 supervisors. In HIES 2010, the tasks of supervisors were determined before commencement of the field work. The supervisors were given the authority to examine all questionnaires completed by the field staff and verify that each interview has been carried out correctly and the questionnaires properly completed. Aside from the supervision by the field supervisors, the Divisional Coordinators from the

headquarters frequently visited the sample areas and observed one or more interviews carried out by enumerators in every term and provide solution to any problem faced by the enumerators. Provisions were made for holding term-wise discussions of the supervisors with all of his team members in order to access the progress of the interviewer. The enumerators and female facilitator used this opportunity to inform the supervisors of any problem they faced during the period and the supervisors, in their turn, helped the enumerators in solving their problems. The control and supervision measures as discussed above vastly enhanced the quality of enumeration in HIES 2010.

1.9 Data Entry, Processing and Validation

The interviewers regularly entered all the information collected during the interview into the laptop at the end of the day. If they have noticed any inconsistency in the data, they went back to the relevant households and made required changes to remove the discrepancy. Once they has completed and checked the information, they must also “validate” the data entered through data entry programme that has the mechanism to check the information for accuracy. Thus, the data were cleaned and validated at the field level. The entered data were sent to the headquarters through Internet by the first week of the following month. Thus, data entry, cleaning and validation were completed in the HIES headquarters located in Dhaka, simultaneously along the survey work. After receiving all the data from the field, they were merged together for tabulation and thoroughly edited for any missing data or inconsistency in the data. Finally, tables were generated from the cleaned data using data analysis software like STATA, FoxPro and SPSS.

CHAPTER-II

HOUSEHOLD AND POPULATION CHARACTERISTICS

This chapter deals with household and population characteristics acquired from HIES-2010. The estimates derived from the survey results have been compared with the earlier HIES. However, inter HIES comparison may not be strictly valid because of the difference in concepts and definitions and varying sample size etc.

2.1 Household Size

Average household size obtained from Household Income and Expenditure Survey of different years has been presented in table 2.1. It is observed from the table that average household size is decreasing gradually. It was 5.18 in 2000 that reduced to 4.85 in 2005 and it further reduced to 4.50 in 2010 at the national level. In the rural area, the average size of household for the year 2000 was 5.19 and reduced to 4.89 in 2005. It further reduced to 4.53 in 2010. On the other hand, the average size of household in the urban area was 5.13 in 2000, which reduced to 4.72 in 2005 and further reduced to 4.41 in 2010. The decrease in the household size may be attributed to the reduction in fertility rate in the recent years and also to the decomposition of large family into nuclear family. Another important feature that is observed from the table below that, the average size of the female headed household is consistently less than the male headed household.

Table 2.1: Average Household Size by Residence of Head of Household and by Sex

Sex of Head	HIES-2010			HIES-2005			HIES 2000		
	National	Rural	Urban	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7	8	9	10
Both Sex	4.50	4.53	4.41	4.85	4.89	4.72	5.18	5.19	5.13
Male	4.67	4.73	4.52	4.98	5.07	4.84	5.33	5.35	5.24
Female	3.39	3.35	3.53	3.48	3.41	3.59	3.65	3.54	4.05

Distribution of household by household size has been presented in table 2.2. It is revealed from the table that, at the national level, the percentage of household having 3-5 members increased to 65.2% in 2010 from 59.9% in 2005 and 54.9% in 2000. On the other hand, percentage of household having 6 members or more decreased to 23.8% in 2010 from 37.5% in 2000.

Table 2.2: Average Household Size by Residence of Head of Household

Size of Household	HIES-2010			HIES-2005			HIES-2000		
	National	Rural	Urban	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7	8	9	10
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
1	2.4	2.7	1.5	2.1	2.4	1.3	1.6	1.7	1.1
2	8.7	8.4	9.5	7.1	7.2	7.9	5.9	7.0	5.5
3	18.7	18.3	19.8	15.6	15.0	17.5	12.8	12.6	13.4
4	25.9	25.0	28.1	23.8	22.7	27.1	21.4	21.1	22.5
5	20.7	21.0	19.7	20.5	20.6	20.3	20.7	20.5	21.5
3-5	65.2	64.5	67.6	59.9	58.3	64.9	54.9	54.2	57.6
6	11.9	12.0	11.6	14.2	14.7	12.9	15.3	15.2	15.5
7	5.8	6.3	4.4	7.2	7.6	7.0	10.0	10.3	8.8
8	2.8	2.9	2.3	8.4	4.6	3.7	5.3	5.3	5.2
9	1.6	1.6	1.7	2.4	2.6	1.8	3.0	3.1	2.9
10+	1.7	1.8	1.5	2.7	2.8	2.4	3.9	4.0	3.6

This indicates that, the societies tendency of having a nuclear family size is fast gaining momentum.

2.2 Ownership of Land

Table 2.3 presents distribution of households by size of land owned and operated in rural area of Bangladesh. It is revealed from the table that, in rural area, percentage of household having no land reduced to some extent in 2010. Household having land upto 0.49 acre increased from 55.2% in 2005 to 60.5% in 2010, whereas, it was 60.0% in 2000. It is also reveled from the table that, the percentage of households with land ownership 7.50 acre and over decreased to 1.1% in 2010 compared to 1.6 in 2005 and 1.3 in 2000.

In case of operated land, it may be seen from the same table that, the percentage of households having smaller size of operated land i.e. upto 0.49 acre increased over time. It was 52.9% in 2005 which increased to 55.4% in 2010.

Table 2.3: Rural Household by Size of Land (Owned and Operated)

Land Size (in acre)	HIES-2010	HIES-2005	HES-2000
1	2	3	4
Owned land			
Total	100.0	100.0	100.0
Landless	4.6	5.3	5.6
0.01-0.49	60.5	55.2	60.0
0.50-0.99	11.6	12.4	9.5
1.00-2.49	14.6	17.6	15.4
2.50-7.49	7.6	8.7	8.1
7.50+	1.1	1.6	1.3
Operated land			
Total	100.0	100.0	100.0
Landless	3.6	4.1	4.9
0.01-0.49	55.4	52.9	54.0
0.50-0.99	14.2	14.2	11.9
1.00-2.49	18.3	19.1	18.8
2.50-7.49	7.8	8.6	8.8
7.50+	0.7	0.9	1.6

2.3 Housing Condition

Table 2.4 presents data on type of dwelling unit of the head of households and size of land owned in rural area. It is revealed from the table that, the highest 41.89% of household lived in katcha, durable housing structure with the wall and roof are made of tin/CI sheet. The percentage of houses with katch a non durable materials accounts for 34.18% where roof are made of CI sheet/wood and wall is made of non durable material like jute stalks/straw etc. It is observed from the table that 9.47% housing structure were jhupri made of temporary materials like sack, polythene, straw etc.

Table 2.4: Type of Dwelling Unit of Head of Household and Size of Land Owned in Rural Area, 2010

Size of Own Land (Acre)	Type of Dwelling Units (Where head of the household residence)					
	Total	Pucca	Semi- Pucca	Katcha- Durable	Katcha non-durable	Jhupri/ Katcha temporary
1	2	3	4	5	6	7
Total	100	3.65	10.80	41.89	34.18	9.47
Landless	4.59	0.11	0.38	1.28	1.91	0.90

7.50+	1.11	0.13	0.29	0.36	0.26	0.07

2.4 Occupation

Table 2.5 provides distribution of head of households by main occupation and by residence. In 2010, the highest 36.1% of the head of household was engaged in agriculture, animal husbandry, forestry and fisheries, 16.9% were engaged in production & related works and transport works, 11.6% in the sales occupation and 2.9% were in clerical and related workers and government executives. The percentage of head of household engaged in administrative and managerial works was 2.9%. In the rural area, 46.4% of the head of households engaged in agriculture occupation followed by production and related workers and transport works 13.4%. In the urban area, 26.5% households are engaged in production and related works and transport workers followed by 18.9% in sales works.

Table 2.5: Distribution of Head of Households by Residence and Main Occupation-2010

Sl No.	Major Occupation	National	Rural	Urban
1	2	3	4	5
1.	Professional, technical & related workers	6.1	4.8	9.5
2.	Administrative & managerial works	2.9	1.9	5.8
3.	Clerical & related works and govt. executive	2.9	1.3	7.0
4.	Sales workers	11.6	8.9	18.9
5.	Service workers	5.9	5.4	7.4
7.	Agricultural, animal husbandry, Forestry & Fisheries	36.1	46.4	8.3
8.	Production & related workers and transport workers	16.9	13.4	26.5
9	Head not working	17.6	17.9	16.7
10.	Total	100.0	100.0	100.0

2.5 Age-sex Composition

Table 2.6 presents age-sex structure of the population by residence. It is revealed from the table that, percentage of population aged 0-14 decreased to 34.72% in 2010 compared to 37.7% in 2005. The percentage of rural population in this age group in 2010 was 35.78%, whereas, in urban area it was 31.71%. The corresponding figures in 2005 were 38.0% and 32.9% respectively. So, it is observed that, in both years, percentage of population aged 10-14 was higher in rural area than that of in the urban area.

Table 2.6: Age-sex structure (percent) of population by residence 2010

Age Group	Both Sex	Male	Female
National

45-49	5.53	6.25	4.80
50-54	4.15	4.74	3.56
55-59	3.00	3.35	2.65
60+	5.84	6.07	5.61

The percentage of rural population aged 15-59 was 57.89 in 2010 compared to 62.45% in urban area. The corresponding figures for the same age group in 2005 were 54.8% and 62.0% respectively. On the other hand, percentage of rural population aged 60 and above years in 2010 was 7.95%, whereas, it was 5.84% in urban area. The corresponding figure in 2005 was 7.2% and 5.1% respectively. This might be the reflection of migration of working aged population from rural to urban areas and returning back to their rural areas at the age of 60 and above.

2.6 Marital Status

Table 2.7 presents marital status of the population aged 10 years and above. It is revealed from the table that, 39.6% of the rural male and 41.3% of urban male of 10 years above were never married in 2010, compared to 24.8% of rural female and 26.9% of urban female never got married. The percentage of never married male in rural area in the age group 50+ was 0.6% in 2005. In 2010 it decreased to 0.2%. However, for rural female of age 50 year and over, it was 0.3% in 2005 which slightly increased in 2010. In the urban area, the percentage of never married was 0.1% in 2005 which increased to 0.5% in 2010.

2.7 Different Demographic Ratios

Table 2.8 presents broad age composition of different HIES surveys. This table also shows sex ratio and child-women ratio. It is revealed from the table that sex ratio was 101.2 at national level in 2005, 103.2 in 2000 and reduced to 98.2 in 2010. The demographic dependency ratio decreased to 65.3 in 2010 from 77.6 in 2000. The same trend is observed in rural and urban areas also. But the decrease of dependency ratio in urban area was much faster than the rural area. National child women ratio fell to 387 in 2010 from 492 in 2000. This falling rate was higher in urban area than that of in rural area.

CHAPTER-III

BASIC NEEDS INDICATORS

Housing condition is one of the important pointer in the set of living standard indicators. In this survey, the place of abode where the head of households lives is considered as, one of the indicators. The information about the other indicators of basic needs, such as, toilet facility, sources drinking water, electricity facility, telephone/mobile phone, computer, e-mail and arsenic contamination of water etc. are also covered in this chapter. In fact, these are considered as the most important indicators for measuring the standard of living. The other basic needs indicators like food, clothing, health and education are provided in the subsequent chapters.

3.1 Housing Structure

In this survey, housing structure refers to only those structures where the head of household reside. Table 3.1 shows that, at the national level the highest 38.46% of the heads of household lived in house made of CI sheet/wood in the walls, 16.72% of the households were found living with wall made of Mud/Brick/Wood whereas, same material was found in the roof of 1.52% households, Fence/straw/bamboo was observed in the wall of 19.29% households and 3.09% roofs of the households. It is observed that 9.46% households had roof material made of brick/cement while 25.12% had wall made of the same material.

In rural area, about 43.24% percent of the heads of household reside in houses with wall made of CI sheet/wood and 41.89% households were found living with roof material made of CI sheet/wood. Roofs made of brick/cement were found in case of 2.78% households while wall made of the same materials were found in case of only 13.59% households. In contrast, in the urban areas, 56.59% households had wall made of concrete and 27.67% had roof made of concrete. CI sheet/wood was found in the wall of 25.40% households and roof of 24.36% of households.

Table: 3.1 Dwelling Units of Head of Household by Type of Roof and Wall Material

3.2 Access to Toilet Facilities

Household access to different types of toilet facilities has been presented in table 3.2. It is observed that, in 2010, at the national level 18.37% households reported to have access to sanitary latrine, 17.14% with pucca (water sealed) toilet, 15.54% households with pucca toilet (not water sealed), 24.51% households with katcha (permanent) toilet, 20.03% households with Katcha (temporary) toilet and 4.40% used open space for discharging of human waste. It is a positive progress towards the overall living standard that percentage of no toilet (Open space) has significantly come down to 4.40% in 2010 from 11.31% in 2005.

Urban-rural variation in access of toilet facilities was obvious. In the rural area, 13.90% households reported to have sanitary latrine, while 30.56% households in the urban area had sanitary latrine. Water sealed pucca latrine reported to own by 28.48% urban households compared to 12.99% rural households. Pucca (not water sealed) was reported by 17.08% urban households as against 14.98% rural households. 5.73% rural households had no toilet facilities against 0.77% urban households.

Variations in use of toilet facility were also observed among administrative divisions of the country in 2010. The highest percentage of sanitary latrine 36.89% was observed in Chittagong, followed by Barisal 30.84%, Dhaka 16.14% and Khulna division 13.75%. On the other hand, pacca (water sealed) latrine was observed the highest among 23.07% households in Dhaka division followed by Khulna 21.29% and Barisal 20.88%. A high 30.20% households of Khulna division reported to use pacca latrine (not water sealed), followed by Barisal 28.50%, Dhaka division 19.10% and Sylhet divisions 10.76%. Use of katcha toilet (permanent) was reported by the highest 46.30% households in Rangpur followed by Dhaka division 23.90%, Rajshahi 23.22% and Chittagong divisions 22.74%. Use of katcha (temporary) toilet was found the highest in Sylhet divisions 35.12% followed by Rajshahi divisions 31.35%, Rangpur divisions 21.45% and Chittagong Division 20.77%. Use of open space was more pronounced in Rangpur divisions. 14.71% households of Rangpur divisions reported to use open space for discharge of human waste, followed by Sylhet division 8.27 and Rajshahi division 7.63%.

3.3 Sources of Drinking Water

Table 3.3 provides the distribution of households by sources of drinking water in 2010. At the national level, 85.37% used tube well water, 10.62% used supply water and the rest 4.01% used other sources of water, such as, ponds/ rivers/canals/wells etc. In 2005, around 89.04% of households used tube-well water for drinking purpose and 7.63% used supply water and the rest 3.30% households used water from either pond/river/tube-wells/indra or other sources. Use of supply water has increased by 2.99% in 2010 with respect to 2005.

Table: 3.3 Percentage Distributions of Households by Sources of Drinking Water and Residence

Variation in access of drinking water between rural and urban areas is also evident from the table 3.3. It is revealed from the table that, in 2010, 1.47% rural households used supply water compared to 35.57% urban households. In 2010, in the rural area 94.97% households used tube-well water compared to 59.18% urban households. On the other hand, in 2005, 95.28% rural households and 70.70% urban households used tube-well water for drinking purpose.

Some variations in respect of sources of drinking water among the divisions is also noticed in 2010. Use of supply water was reported to be the highest 21.30% households in Dhaka division followed by Chittagong division 13.71%, Sylhet division 3.88% and Rajshahi division 2.66%. The highest 96.86% households of Rajshahi division used tube-well water for drinking purpose followed by Rangpur division 98.07%, Barisal division 94.57%, Sylhet division 91.17% and Khulna division 91.09%. It is observed from the table that, a significant proportion of households of Khulna division 3.20% and Barisal division 2.07% used unsafe pond/river/well/indra/waterfalls water for drinking.

In the rural area the sources of drinking water by size of land ownership shows highest percentage of tube-well water was used by 0.01-0.04 owning group 96.48%, whereas, for supply water, the highest percentage was observed for land owning group 7.50% and above 4.73% followed by landless group 4.02%. One possibility could be that these set of households may be living in the growth centre near urban area.

Table 3.4: Rural households by size of land owned and sources of drinking water

Size of land owned	% of Household	Total	Supply water	Tube-well	Pond/River/Canal	Well/Indra	Water falls	Other
Landless	4.59	100	4.02	88.26	2.11	4.81	0.27	0.53

3.4 Access to Electricity, Telephone and Mobile phone, Computer, E-mail and Arsenic Contamination in Water

Distribution of households with access to electricity, telephone, mobile phone, computer e-mail and arsenic contamination in tube-well water is presented in Table-3.5. It is observed that, in 2010, 55.26% households reported to have access to electricity at the national level, 42.49% rural and 90.10% urban households are enjoying such facility. Households enjoying telephone was found in case of 2.07% of households at the national level with 0.70% in rural area and 5.79% in the urban area. Penetration of mobile phone system was phenomenal between 2005 and 2010; 63.74% households use mobile phone at the national level and such percentage was 56.77% in the rural area and 82.74% in the urban area. 3.01% households at the national level reported to have ownership of computer. Such percentage was 0.97% in the rural area and 8.58% in the urban area. Use of e-mail facility was reported in case of 1.39% households at the national level 4.10% in the urban households and 0.39% in the rural areas. It is notable that, arsenic test in tube-wells were done in case of 56.62% households at the national level of which 7.32% were found to have been contaminated with of arsenic. In rural area 56.47% tube-well was tested out for arsenic contamination. It was found that, 8.08% tube-wells have been positively infected with arsenic in the rural area. In urban area 57.28% tube-wells were tested for arsenic of which 4.03% were found positive.

Table-3.5: Percentage of Households Having Electricity and Other Facilities by Administrative Divisions

Residence and facilities	National	Barisal Div.	Chittagong Div.	Dhaka Div.	Khulna Div	Rajshahi (Former) Div	Rajshahi Div	Rangpur div	Sylhet div

CHAPTER-IV

INCOME AND EXPENDITURE

This chapter details with estimates of household income and expenditure based on the findings from Household Income and Expenditure Survey 2010. Income and expenditure estimates are central to the entire findings of the Survey. Moreover, distribution of income and expenditure by decile group, Gini co-efficient by income, expenditure by land ownership, consumption expenditure and expenditure by major food items have also been discussed in this chapter. The economic scenario presented here is the fundamental basis for short and long term economic analysis of the economy.

4.1 Level of Income

Table 4.1 provides monthly income per household, number of earner per household, monthly income per member (monthly per capita income) and monthly income per earner etc. Average monthly income per household at current price was estimated at taka 11479 at the national level in 2010. This was Tk. 7203, Tk. 5842 and Tk. 4366 in 2005, 2000 and 1995-96 respectively. In 2010, the monthly household income increased by 59.36% when compared with 2005 and by 162.9% with respect to 1995-96. Per capita monthly income was estimated at taka 2553 in 2010. This was Tk. 1485, Tk. 1128 and Tk. 830 in 2005, 2000 and 1995-96 respectively.

Per capita monthly income increased by Tk. 1068 (71.92%) in 2010 compared to 2005 and increased by Tk. 1723 (207.59%) over the year 1995-96. It is notable that in 2010, rural income increased at a higher rate than that of urban income. In 2010, rural income increased by 58.29% whereas urban income increased by 57.45% in 2010. This increase of income in both urban and rural areas accelerated the process of poverty reduction in both urban and rural areas.

Table 4.1: Number of Members, Earners, Household Income, Income Per Member and Earner By Residence

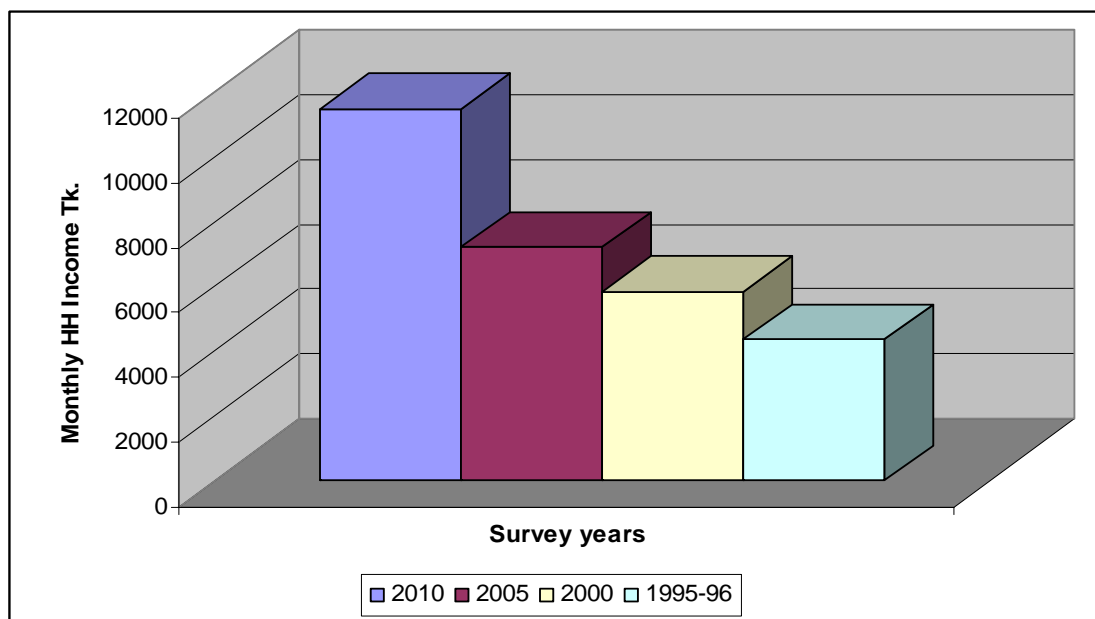

Survey Year and Residence	Number of Member Per Household	Number of Earner Per Household	Monthly Household Income Per Household	Monthly Income Per Member	Monthly Income Per Earner
01	02	03	04	05	06
National					
2010	4.50	1.31	11479	2553	8795
2005	4.85	1.40	7203	1485	5145
2000	5.18	1.45	5842	1128	4029
1995-96	5.26	1.48	4366	830	2950
Rural					
2010	4.53	1.27	9648	2130	7592
2005	4.89	1.37	6095	1246	4449
2000	5.19	1.43	4816	928	3368
1995-96	5.25	1.46	3658	697	2505
Urban					
2010	4.41	1.40	16475	3740	11778
2005	4.72	1.50	10463	2217	6975
2000	5.13	1.54	9878	1926	6414
1995-96	5.30	1.59	7973	1504	5014
Urban as % of Rural					
2010	97	110	171	176	155
2005	96	109	172	178	157
2000	99	108	205	208	190
1995-96	101	109	218	216	200

In HIES-2010, the number of earners per household was found to be 1.31 at national level, 1.27 in rural area and 1.40 in urban area. Since, 1995-96, number of earner per household shows a declining trend and has a positive correlation with the declining changing pattern of household size.

In 2010, income per earner was found to be taka 8795 for the country as a whole. In rural area, this was taka 7592 and in the urban Tk. 11778. Income per earner increased to Tk. 8795 in 2010 from Tk. 5145 in 2005, an increase of Tk. 3650 (70.94%) during this period.

The chart 1 gives the graphical presentation of monthly household income for 2010, 2005, 2000 and 1995-96 by residence.

Chart 1: Monthly Household Income for HIES 2010, 2005, 2000 and 1995-96

4.2 Income Distribution

Decile groups from the table 4.2 shows the pattern of distribution of income from percentage share of income of households. It is evident from the table 4.2 that the gap between the poorest of the poor (bottom 5%) and the richest of the rich (top 5%) is extremely high. In HIES 2010, the income accruing to top 5% of the household was 24.61%, whereas, the same was 0.78% for the bottom 5% household. In 2005, income accruing to top 5 percent of the households was 26.93%, where the same was 0.77% for the bottom 5%. It slightly increased from 0.77% to 0.78% in 2010. On the contrary, the share of income of the top 5% decreased from 26.93% to 24.61% over the same period indicating redistribution of income in favour of the mid-level.

It is also evident from the table 4.2 that, income accruing to households belonging to Decile-1 to Decile-5 remains almost same in 2010 and recorded at 2.00%, 3.22%, 4.10%, 5.00% and 6.01% respectively at national level. Percentage shares in 2005 were 2.00%, 3.26%, 4.10%, 5.00% and 5.96% respectively. These five deciles jointly share only 20.33% of total income, although they comprise 50% of the population. In 2010, the income share of the

households belonging to Decile-6 to Decile-9 increased but, that of Decile-10 decreased corresponding to those of 2005. In 2010, the decile-6 shared 7.32% of the total income, decile-7 9.06%, decile-8 11.50%, decile-9 15.94% and decile-10 35.85%, whereas, these were 7.17%, 8.73%, 11.06%, 15.07% and 37.64% respectively in the year 2005.

For both rural as well as urban area, show the similar changing pattern of decile distribution of income as the national level.

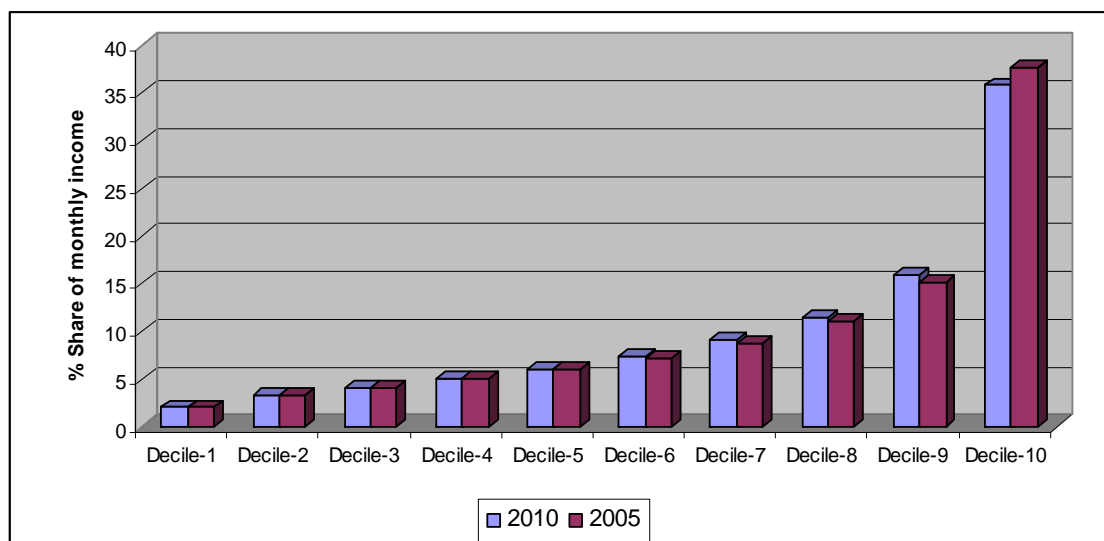

Table-4.2: Percentage share of income of households by Decile group and Gini Co-efficient

Household Income Group	2010			2005		
	Total	Rural	Urban	Total	Rural	Urban
01	02	03	04	05	06	07
National	100.00	100.00	100.00	100.00	100.00	100.00
Lower 5%	0.78	0.88	0.76	0.77	0.88	0.67
Decile-1	2.00	2.23	1.98	2.00	2.25	1.80
Decile-2	3.22	3.53	3.09	3.26	3.63	3.02
Decile-3	4.10	4.49	3.95	4.10	4.54	3.87
Decile-4	5.00	5.43	5.01	5.00	5.42	4.61
Decile-5	6.01	6.43	6.31	5.96	6.43	5.66
Decile-6	7.32	7.65	7.64	7.17	7.63	6.78
Decile-7	9.06	9.31	9.30	8.73	9.27	8.53
Decile-8	11.50	11.50	11.87	11.06	11.49	10.18
Decile-9	15.94	15.54	16.08	15.07	15.43	14.48
Decile-10	35.85	33.89	34.77	37.64	33.92	41.08
Top 5%	24.61	22.93	23.39	26.93	23.03	30.37
Income Gini Co-efficient	0.458	0.431	0.452	0.467	0.428	0.497

The Gini Co-efficient of income decreased to 0.458 in 2010 from 0.467 in 2005. This decrease of Gini Co-efficient bears the evidence that, income share of higher declines decreased to some extent in 2010 compared to 2005.

Chart 2 provides the graphical presentation of decile distribution of income, at national level for HIES 2010 and 2005.

Chart 2: Decile Distribution of Income of Household by Survey Years 2010 and 2005 (National)

4.3 Sources of Income

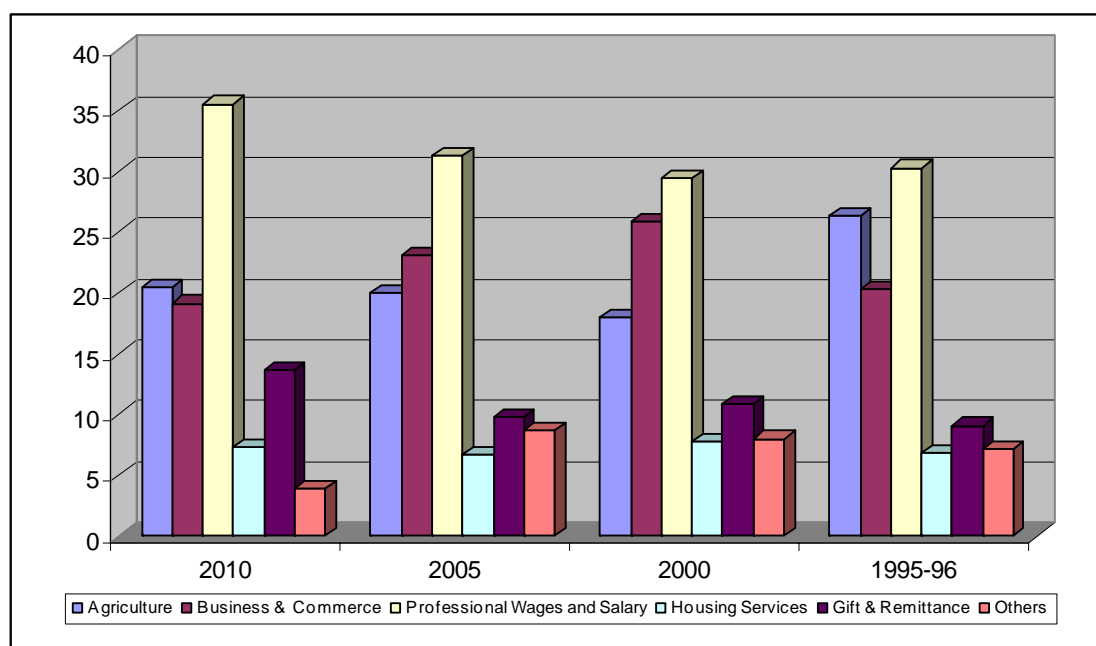

Table 4.3 exhibits percentage of income of households by major sources of income with rural and urban break-down. The share of agriculture as source of income of the households at the national level increased to 20.44% in 2005 from 20.0% in 2005. On the contray, the sectoral share of agriculture as source of income estimated in 2009-10 GDP was found to be 20.29 which is very close to that of HIES 2010 estimate. In the rural area, the share of agriculture as source of income was 29.73% whereas; the same was 5.56% in urban area. In 2010, the percentage share of business and commerce was 19.16%; its share was 15.05% in the rural area and 25.75% for urban area. At national level, the percentage share of business and commerce declined to 23.1% in 2005 from 25.9% in the year 2000. The highest percentage share of household income came from professional wages and salary was recorded at 35.55% at national, 29.57% in rural area and 45.14% in urban area in 2010. The housing services recorded at 7.27% share at national level, 5.18% in rural area and 10.63% in urban area. Household income from gift and remittance accounted to 10.62% at national level, 17.28% in rural area and 7.75% in urban area in 2010.

Table: 4.3: Percentage Share of Income of Households by Sources of Income

Decile of Household	Total	Agriculture	Business & Commerce	Professional Wages and Salary	Housing Services	Gift & Remittance	Others
1	2	3	4	5	6	7	8
National							
2010	100.0	20.44	19.16	35.55	7.27	13.62	3.93
2005	100.0	20.0	23.1	31.3	6.7	9.8	8.7
2000	100.0	18.0	25.9	29.4	7.8	10.9	8.0
1995-96	100.0	26.3	20.3	30.3	6.8	9.1	7.2
Rural							
2010	100.0	29.73	15.05	29.57	5.18	17.28	3.16
2005	100.0	28.7	17.3	28.1	5.1	12.0	8.7
2000	100.0	25.5	22.4	27.7	5.0	11.0	8.4
1995-96	100.0	35.4	14.7	27.7	6.5	9.6	6.1
Urban							
2010	100.0	5.56	25.75	45.14	10.63	7.75	5.15
2005	100.0	5.8	33.1	36.9	9.5	5.9	8.7
2000	100.0	3.7	32.4	32.6	13.1	10.6	7.5
1995-96	100.0	4.8	33.4	36.6	7.4	7.9	9.9

The graphical presentation of percentage share of income by major sources of income for last four survey years is shown in chart 3.

Chart 3: Percentage Share of Income of Households by Source of Income at National Level for 2010, 2005, 2000 and 1995-96

4.4 Consumption Expenditure

Table 4.4 gives the estimates for monthly expenditure and consumption expenditure per household. At the national level, average monthly expenditure per household was estimated at taka 11200 at current price in 2010. It was taka 9612 in rural area and taka 15531 in urban area. Average monthly expenditure shows an increasing trend. It was taka 6134, taka 4881 and taka 4096 in 2005, 2000 and 1995-96 respectively.

The average monthly consumption expenditure per household was taka 11003 in 2010 at the national level. In rural area, the average consumption expenditure was taka 9436 per month, whereas, in the urban area, it was found to be taka 15276. In 2005, it was Tk. 5964, Tk. 5165 and Tk. 8315 at national level, rural and urban respectively. The monthly average consumption increased by 84.5% over the year 2005 and by 142.5% over 2000.

The consumption expenditure was 98.2% of the total expenditure at national level, 98.2% in rural area and 98.4 in urban area in 2010.

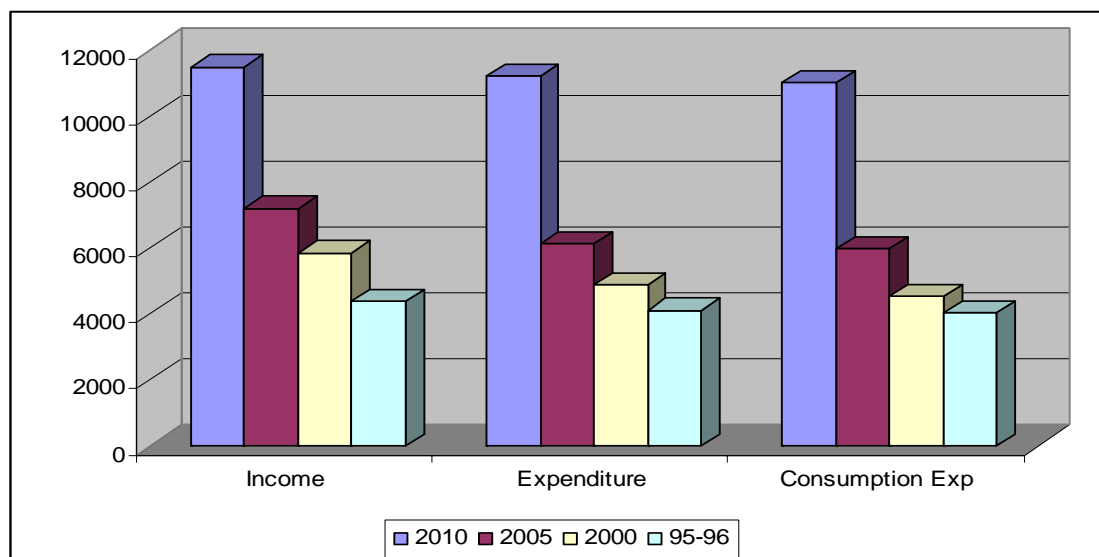

Table 4.4: Average Monthly Expenditure and Consumption Expenditure per Household by Residence

Year	Residence	Average Expenditure per month	Average Consumption per month	% Of total Expenditure	
				Consumption	Non-consumption
01	02	03	04	05	06
2010	National	11200	11003	98.2	1.8
	Rural	9612	9436	98.2	1.8
	Urban	15531	15276	98.4	1.6
2005	National	6134	5964	97.2	2.8
	Rural	5319	5165	97.1	2.9
	Urban	8533	8315	97.4	2.6
2000	National	4881	4537	93.0	7.0
	Rural	4257	3879	91.1	8.9
	Urban	7337	7125	97.1	2.9
1995-96	National	4096	4026	98.3	1.7
	Rural	3473	3426	98.7	1.3
	Urban	7274	7084	97.4	2.6

The standard errors of income and consumption expenditure are estimated at Tk. 280.62 and Tk. 223.14 respectively and relative standard errors (Co-efficient of variation) of those are estimated at 2.44% and 2.03% respectively (For details, see appendix-D).

The chart 4 provides the graphical presentation of household nominal income, expenditure and consumption expenditure at national level, for 2010.

Chart 4: Monthly Household Nominal Income, Expenditure & Consumption Expenditure by Residence-2010

The table below provides monthly household nominal income, expenditure and consumption expenditure by administrative divisions from HIES-2010.

Table 4.5 Monthly Household Nominal Incomes and Consumption Expenditures by Divisions-2010

Division	Income	Consumption Expenditure
1	2	4
Total (National)	11479	11003
Barishal Division	9158	9826
Chittagong Division	14092	14360
Dhaka Division	13226	11643
Khulna Division	9569	9304
Rajshahi Division	9342	9254
Rangpur Division	8359	8298
Sylhet Division	11629	12003

The highest average monthly household nominal income was recorded at Tk. 14092 for Chittagong Division followed by Dhaka Division at Tk. 13226 and Sylhet Division at Tk. 11629 and all of these exceeded the national average of Tk. 11479 in 2010. The four Divisions, which recorded monthly household income below the national average, were Barishal Division at Tk. 9158, Khulna Division at Tk. 9569 and Rajshahi Division at Tk. 9342, Rangpur Division 8359.

The highest average monthly consumption expenditure was recorded in Chittagong Division at Tk. 14360 followed by Sylhet Division at Tk. 12003 and Dhaka Division at Tk. 11643 and their income exceeded the national average of monthly household consumption expenditure at Tk. 11003 in 2010. On the other hand, the average monthly household expenditure of Barishal Division, Khulna Division and Rajshahi Division and Rangpur Division fell well below the national average and were estimated at Tk. 9826, Tk. 9304 Tk. 9254 and Tk. 8298 respectively.

4.5 Level of Income and Expenditure by Size of Own Land in Rural Area

Table 4.6 provides information on monthly household income, expenditure, family size and number of earners by size of own land in the rural area. In the landless group, the average income per household was taka 5713 in 2010. The corresponding figures for 2005 & 2000 were taka 3299 & 3248 respectively. On the other hand, the average income of the households owning land size 7.50 acres & above was taka 29673 which was 5.2 times higher than the average income of landless group. Average monthly income per household in rural area increased with the increase of size of owned land owned. Thus, land holding size is an important determinant of income particularly in rural area. It appears from the table 4.5 that, the highest percentage of households (37.76%) owned land 0.05-0.49 acres, where 79.63% households owned land 0.01-1.49 acres. This indicates that, the farm size is very small in Bangladesh.

Another important feature was found that, the family size increased with the increase of own land size owned. The family size were 3.83 for the landless, 4.09 for land size 0.01-0.04 acre, 4.53 for land size 0.05-0.49 acre, 4.69 for land size 0.50-1.49 acres, 4.88 for land size 1.50-2.49 acres, 5.37 for land size 2.50-7.49 acres and 5.83 for land size 7.50 acres or more.

The number of earners per household also increased with the increase of land size except for landless household. Number of earner was 1.27 in rural area where 1.31 for the landless, 1.16 for land size 0.01-0.04 acre, 1.26 for land size 0.05-0.49 acre, 1.27 for land size 0.80-1.49 acres, 1.34 for land size 1.50-2.49 acres, 1.50 for land size 2.50-7.49 acres and 1.83 for land size 7.50 acres or more.

The monthly household expenditure by own land size also shows increasing pattern with the increase of Own land size owned.

Table 4.6: Percentage of Rural Households, Family Size Number of Earners, Monthly Income and Expenditure by Owned Land Size

4.6 Food Expenditure

Table 4.7 captured the food expenditure pattern incurred to households in different survey years. Percentage share of expenditure of items of the food bundle is also presented in this table. Monthly food expenditure was taka 6031 per household in 2010 of which expenditure on cereals was 35.95%. The table shows that, cereals accounted for bulk of the food expenditure. The share of expenditure on cereals decreased by 3.05% percentage points in 2010 compared to 2005. In the rural area, expenditure share of food decreased to 39.62% in 2010 compared to 42.25% in 2005. In the urban area expenditure share of cereals decreased to 28.41% in 2010 compared to 31.30% in 2005.

Table 4.7: Percentage Share of Food Expenditure by Residence & Major Food Items

Food item	National			Rural			Urban		
	2010	2005	2000	2010	2005	2000	2010	2005	2000
01	02	03	04	05	06	07	08	09	10

Milk/Milk products	3.02	3.74	3.95	2.74	3.46	3.62	3.58	4.41	4.89
Edible oil	4.35	4.25	3.71	4.26	4.07	3.62	4.53	4.67	3.97
Condim/Spices	9.99	7.52	7.13	10.54	7.18	7.22	8.85	8.31	6.87
Fruits	4.08	3.23	2.97	3.49	2.97	2.57	5.29	3.83	4.10
Sugar/Gur	1.06	1.56	1.34	1.04	1.54	1.29	1.12	1.62	1.49
Beverage	0.73	0.68	1.97	0.51	0.45	1.57	1.18	1.21	3.10
Miscellanies	5.67	8.25	8.29	6.15	8.25	7.62	6.38	8.23	10.18

Table 4.8 shows that, in rural area the share of expenditure on cereal has decreased to 49.34% in 2010 from 43.02% in 2005 for landless group. It is observed that, as the land holding size increase the share of expenditure on vegetables decreases with some exception but expenditure on fish, meat and poultry and eggs, milk and fruits increases.

Table 4.8: Share of Expenditure on Major Food Items by Size of Owned Land in Rural Area

Size of Land Owned	Ave. Exp. on Major Food Item	Share of Expenditure on Major Food Items								
		Total	Cereal	Pulses	Vegetables	Fish	Meat, Poultry/ Egg.	Milk	Fruits	Others

2.50-7.49	4459	100.0	39.00	2.21	7.34	12.54	10.32	5.03	3.35	20.20
7.50+	6207	100.0	36.64	2.33	7.14	13.61	10.40	5.69	4.24	19.92

It is found from the table 4.9 that, share of food was 54.81% of the total consumption expenditure at the national level in 2010, as compared to 53.81% in 2005. In rural area, this share was 58.74%, but in urban area, it was 48.19% in 2010, vis-a-vis 58.54% and 45.17% respectively in 2005. It is observed that, the share of housing and house rent decreased from 12.25% in 2005 to 9.95% in 2010. The share of fuel and lighting decreased to 5.63% in 2010 from 5.98% in 2005.

It appears from the table 4.9 that, 54.81% of consumption expenditure accounted to food and beverage, 4.95% to cloth and footwear, 9.95% to housing and house rent, 5.63% to fuel and lighting, 1.68% to household effect and 22.98% to miscellaneous expenditure at national level. The percentage share of food and beverage consumption increased from 53.81% in 2005 to 54.81% in 2010. The consumption expenditure on housing and house rent decreased from 12.25% in 2005 to 9.95% in 2010.

The distribution by rural and urban shows some variation of share of consumption by major expenditure groups. In 2010, 58.74% consumption expenditure accounted to food and beverage in the rural area, whereas, the same was 48.19% in the urban area. It is evident that, the rural people spend bulk of their consumption expenditures on food and beverage than that of the urban people.

Another significant change is observed in case of expenditure on housing and house rent. It was estimated at 9.95% in 2010, where as, it was 12.25% in 2005. Share of consumption expenditure on housing and house rent has reduced in 2010 because of increase in share of consumption expenditure in other heads. Share of expenditure on cloth & footwear and fuel & lighting have decreased by about one percent in both the cases.

Table 4.9: Percentage Distribution of Different Components of Consumption Expenditure by Residence

Residence	Average Consumption	Share of Components of Consumption Expenditure

4.7 Consumption Expenditure by Decile Groups

Percentage share of income by decile groups and Gini co-efficient with rural and urban break down for the surveys conducted during 2010 and 2005 are presented in table 4.11.

Table 4.11 Provides information on percentage distribution of consumption expenditure by food and non-food items as well as by decile groups, The distribution shows that, it strictly follows the Engle's law, ie, the low income households spend more on consumption of food items. On the other hand, the rich households spend less on consumption of food and more on non-food items. In 2010, the national average share of food expenditure was 54.8%, whereas, the bottom 5% households spent 72.3%, Decile-1 71.2%, Decile-2 69.0%, Decile-3 67.1%, Decile-4 65.0%, Decile-5 63.3%, Decile-6 61.6%, Decile-7 59.3%, Decile-8 56.4%, Decile-9 52.1%, Decile-10 41.0% and top 5% 37.8% for food items. This data series shows a trend of diminishing share of expenditure on food. From other angle of view, the Decile-1 spends 72.3%

of total expenditure on food and 27.7% on non-food. On the other hand, the Decile-10 spends 41.0% on food and 59.0% on non-food. The pattern is just reverse for these two Deciles.

The decile distribution of consumption expenditure (HIES-2010) for rural and urban areas show similar pattern.

Table 4.11: Percentage Distribution of Consumption Expenditure for Food and Non-Food Items by Decile Group of Households

CHAPTER-V

CONSUMPTION OF FOOD

This chapter provides information about consumption of different items of food in terms of quantity and nutrients like calorie and protein intake by the people. Food is essential for survival and adequate intake of balanced food with required nutrients is vital to leading a healthy and productive life. Every food item has its own calorie, protein and other nutrient contents, which are essential for health. Nutritional values vary over different food items. It is important therefore for individuals to consume a balanced diet to meet calorie, protein and other nutritional needs. But, in Bangladesh, a large segment of the population fails to consume food items with the required composition and at the required level to fulfill the nutritional requirements. The lack of capacity is mainly due to food poverty which constrains the poor people to access the required quantity and quality of food and ensure food security. Moreover, there may also exist some people who fail to consume a balanced basket of food due to lack of nutritional knowledge and other reasons.

5.1 Intake of Food

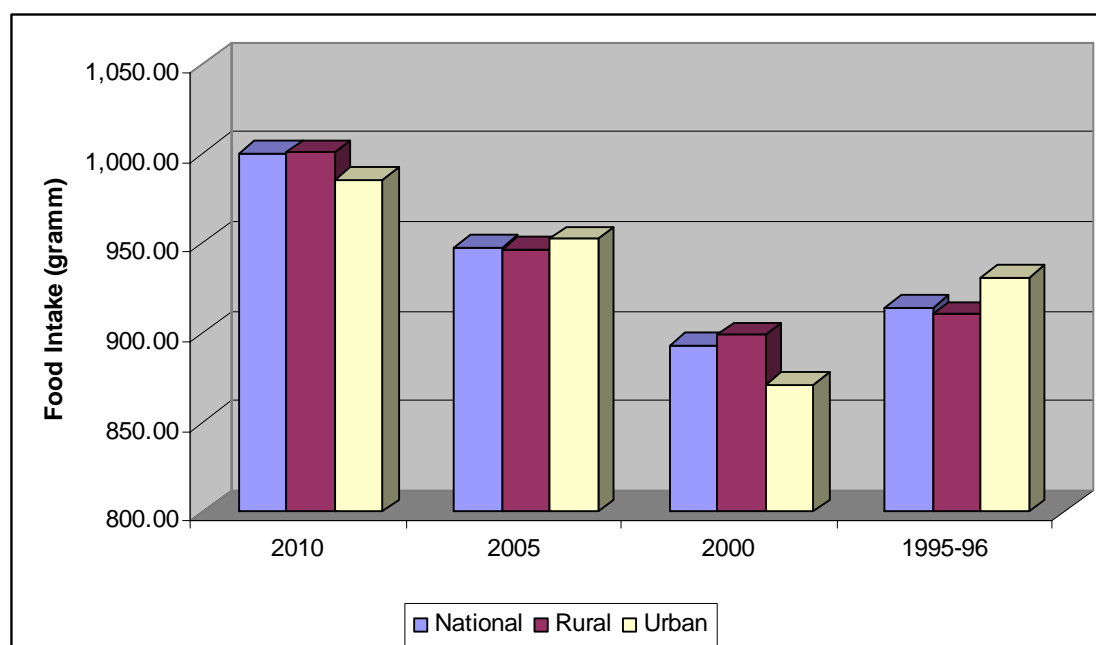

The average per capita per day intake of food (grams) is presented in Table 5.1.

Table 5.1: Trend in Average Food Intake in Grams

Survey Year	Residence		
	National	Rural	Urban
1	2	3	4
2010	1,000.0	1,000.5	985.5
2005	947.8	946.3	952.1
2000	893.1	898.7	870.7
1995-96	913.8	910.5	930.8

In 2010, the average quantity of food items consumed was estimated at 1,000 gram i.e. one kilogram per capita per day at the aggregate level. It was 947.8 gm, 893.1 gm and 913.8 gram in 2005, 2000 and 1995-96 respectively. In rural areas, the average food intake was 1000.5 gm, 946.3 gm, 898.7 gm and 910.5 gram in 2010, 2005, 2000 and 1995-96 respectively. In urban areas, the average food intake shows fluctuating trend over the period 1995-96 to 2010. In 2010, it was estimated at 985.5 gram per capita per day which increased by 5.5 percent over 2005.

Chart- 6 Average Food Intake in Gram by Residence

The average quantity of per capita per day intake of major food items in different survey years is presented in Table 5.2. In the cereals group, the per capita per day intake was recorded at 463.9 gram in which rice contributed 416.0 gram, wheat 26.0 gram and other cereals 21.99 gram in 2010. It is observed that the consumption of rice declined in 2010 but wheat consumption increased by 13.9 gram in 2010 over 2005. The increase in wheat consumption may be due to lower price of wheat compared with earlier years. The national level consumption of other food items like potato, vegetables, milk and milk products, meat, poultry, egg, fish and fruits increased in 2010 over 2005.

The per capita per day consumption of potato increased by 7 gram in 2010 over 2005. Similarly, the consumption of vegetables increased significantly in 2010. However, per capita per day consumption of leafy vegetables declined to 36.1 gram in 2010 from 43.4 gram in 2005, a decline by 16.8 percent. On the other hand, consumption of other vegetables increased by 16.3 gram during the period. Per capita per day consumption of milk and milk products increased to 33.7 gram in 2010 from 32.4 gram in 2005, an increase of 4 percent during the period. Per capita per day consumption of edible oil increased to 20.5 gram in 2010 from 16.5 gram in the year 2000. Within the edible oil group, consumption of soyabean increased significantly, while consumption of mustard oil declined. Per capita per day consumption of meat, poultry and eggs shows increasing trend and was recorded at 26.2 gram in 2010, which was 20.8 gram in 2005. Per capita per day consumption of fish increased to 49.5 gram in 2010

from 42.1gram in 2005, an increase of 17.58 percent over the period. Per capita per day consumption of pulses increased slightly to 14.3 gram in 2010 from 14.2 gram in 2005.

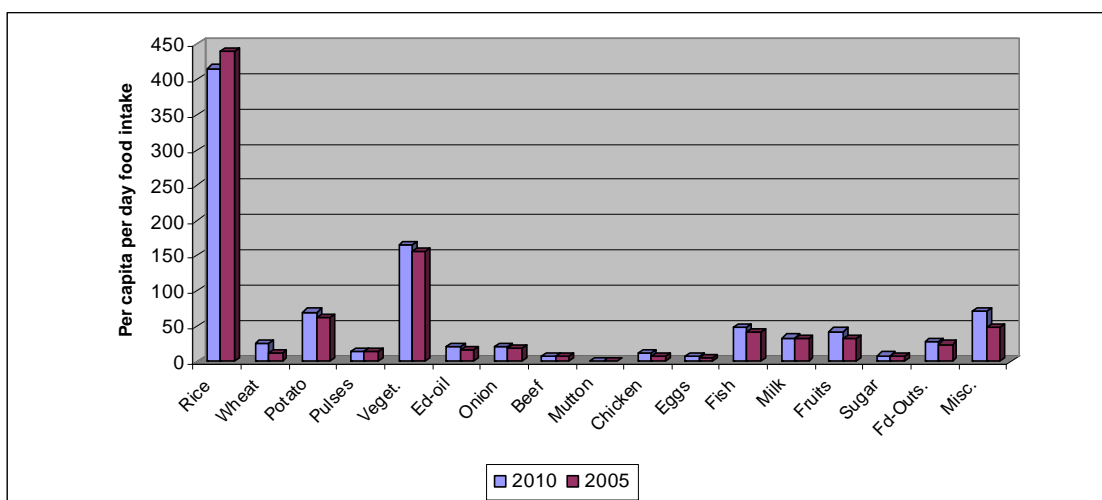

Food consumption pattern in the rural areas is not similar to that in the urban areas. Only cereals were consumed significantly more in the rural areas recorded at 485.6 gram per capita per day whereas this was 402.9 gram in the urban areas in 2010. The rural consumption of rice was 441.6 gram in 2010 compared with 344.2 gram in the urban areas. The consumption of vegetables is low in the urban areas compared with the rural areas which may be due to wider availability of vegetables in the rural areas at cheaper prices. The consumption of pulses is higher in the urban areas than in the rural areas. The consumption of relatively expensive food items such as milk and milk products, edible oils, meat, poultry and egg, fish, sugar/gur, fruits and spices are higher in the urban areas compared with the rural areas.

Chart-7 Average Per Capita Per Day Intake (Gm) of Major Food Items (National)

5.2 Intake of Calorie

The unit of calorie measures the value of food energy intake. Every food item has its own calorie value different from another. Total calorie intake is derived from total consumption of food and presented on a per capita per day basis. The average intake of calorie in different survey years is presented in Table 5.3 along with urban-rural breakdown.

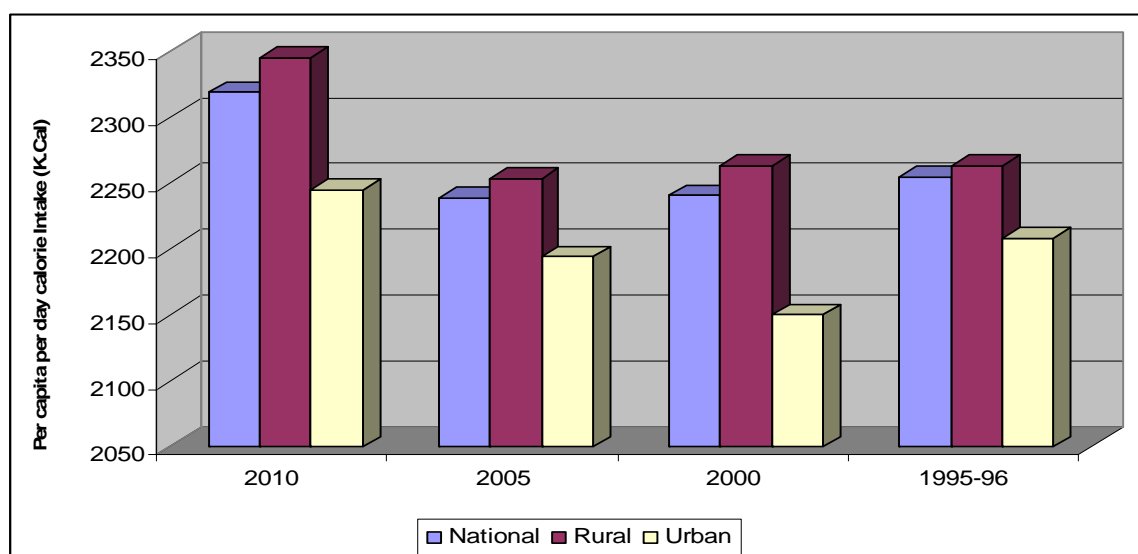

Table 5.3: Average Per Capita Per Day Calorie (K. Cal) Intake by Residence

Survey Year	Residence		
	National	Rural	Urban
1	2	3	4
2010	2318.3	2344.6	2244.5
2005	2238.5	2253.2	2193.8
2000	2240.3	2263.2	2150.0
1995-96	2254.0	2263.1	2208.1

The average calorie intake was estimated at 2318.3 K.cal per capita per day in 2010 which was 2238.5 K. cal in 2005, 2240.3 K. cal. In 2000 and 2254 K. cal in 1995-96. After a gradual decline until 2005, it increased in 2010.

A similar pattern as noticed at the national level is also observed in the rural areas in the case of calorie intake. It was 2344.6 K. cal in 2010, 2253.2 K. cal in 2005, 2263.2 K. cal in 2000 and 2263.1 K. cal in 1995-96. In urban areas, the intake of calorie shows fluctuations over the period. It was 2244.5 K. cal in 2010, 2193.8 K. cal in 2005, 2150.0 K. cal in 2000 and 2208.1 K. cal in 1995-96.

Chart-8 Average Per Capita Per Day Calorie (K. cal) Intake by Residence

5.3 Intake of Calorie by Food Items

Table 5.4 provides the food energy (K.cal.) derived from major individual food items at the national level as well as in rural and urban areas. It appears that, out of the total 2318.3 K. cal received per capita per day from all food items in 2010, 1617.2 K.cal was contributed by cereals in which rice alone contributed 1436.2 K.cal. The other major calorie contributing food groups were edible oils (184.1 K.cal), vegetables (89.1 K.cal), potato (68.2 K.cal), fish (66.1 K.cal), condiments and spices (67.9 K.cal), pulses (50.2 K.cal), milk and milk products (27.4 K.cal), sugar/gur (33.5 K.cal), meat & poultry/egg (33.8 K.cal), fruits (31.1 K.cal) and miscellaneous items (49.9 K.cal).

FRUITS	31.1	28.9	37.1	23.5	23.5	23.7
SUGAR/GUR	33.5	29.4	44.8	32.2	30.0	38.7
Sugar	29.3	24.6	42.4	24.3	20.4	35.9
Gur	4.2	4.8	2.4	7.9	9.6	2.8
MISCELLANEOUS ITEMS*	49.9	44.4	65.0	28.8	27.4	34.0

* Includes tea, soft drinks, bread, biscuits, betel nut, betel leaf, etc.

Table 5.4 further shows that the rural people on average received 2344.6 K.cal per capita per day whereas the urban people's average intake was 2244.5 K.cal per capita per day. This happened mainly due to the fact that the rural people consumed more rice on average (which is

calorie rich) than the urban people. In fact, the rural people need more calories than the urban people since the rural people, in general, are involved in more physically labour intensive work than the urban population.

Chart-9 Per Capita Per Day Calorie Intake by Food Items (National)

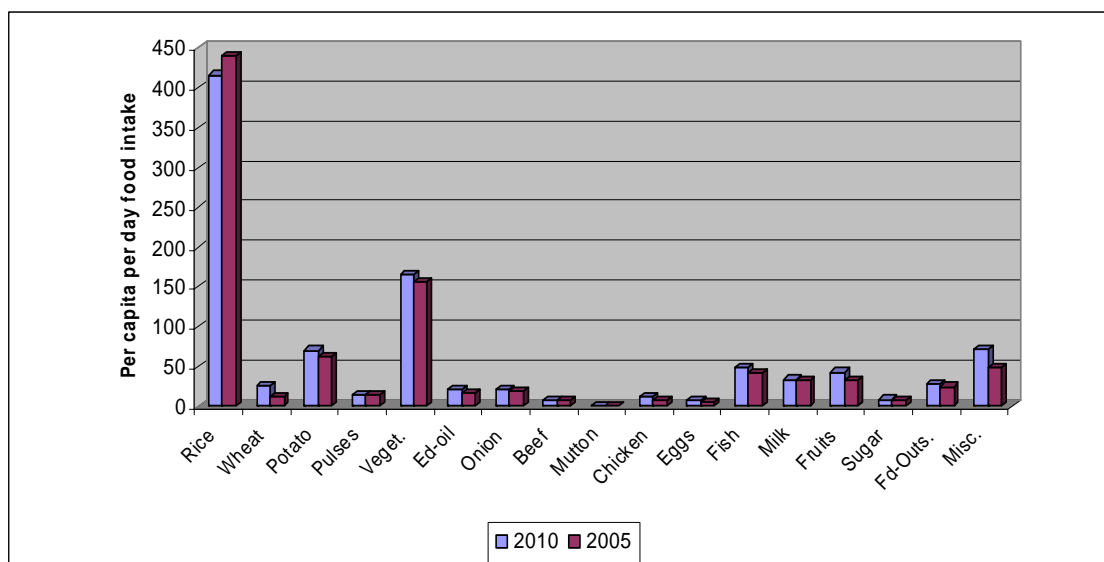

Table 5.5 provides the percentage distribution of the contribution of food energy (calorie) intake by various food items and by residence. It shows that 69.8 percent of the total calorie received by an individual at the national level came from cereals of which rice alone contributed 62.0 percent. The other significant calorie contributing food groups were edible oils (7.9 percent), vegetables (3.8 percent), potato (2.9 percent), condiments and spices (2.9 percent), fruits (1.3 percent) and sugar/gur (1.4 percent). The percentage share of cereals declined to 69.8 percent in 2010 from 73.1 percent in 2005 mainly due to decline in per capita per day consumption of rice by 19.6 grams between 2005 and 2010. On the other hand, the consumption of calorie rich food items like edible oils, milk and milk products and sugar/gur did not increase much to compensate for the calorie deficit resulting from lower consumption of cereals. However, the percentage of intake of milk, edible oils, meat, poultry, egg, fish, and fruits were higher in the urban areas relative to the rural areas. Similar trends are also observed in rural and urban areas.

Table 5.5: Percentage Distribution of Per Capita Per Day Calorie Intake by Food Items

5.4 Intake of Protein

Protein is another important element of food needed to maintain good health and it comes from the consumption of protein enriched food items. Protein intake (in gram) is presented in Table 5.6. It shows that the average daily intake of protein has steadily increased over the years. At the national level, per capita per day protein intake varied between 62.50 gram to 66.26 gram during the period 1995-96 to 2010, Per capita per day protein intake was recorded the lowest at 62.50 gram in 2000 and the highest of 66.26 gram in 2010.

Table 5.6: Average Per Capita Per Day Intake of Protein (Gram)

Survey Year	Residence		
	National	Rural	Urban
1	2	3	4
2010	66.26	65.24	69.11
2005	62.52	61.74	64.88
2000	62.50	61.88	64.96
1995-96	64.96	64.45	67.50

In the rural areas, per capita per day intake of protein varied between 61.74 gram to 65.24 gram with a low of 61.74 gram in 2005 and a high of 65.24 gram in 2010. In the urban areas, similar protein intake ranged between 64.88 gram to 69.11 gram with a low of 64.88 gram in 2005 and a high of 69.11 gram in 2010.

5.5 Intake of Protein by Food Items

The per capita per day intake of protein by individual food items is shown in Tables 5.7 and 5.8. Table 5.7 shows that the average per capita per day intake of protein was 66.26 gram in 2010, which is higher than the corresponding figure in 2005 by about 3.91 gram at the national level. Similar higher intake exists in both rural and urban areas.

Table 5.7: Per Capita Per Day Intake of Protein (in Gram) by Food Items

Table 5.7 shows that the cereals group contributes the most in terms of protein intake and accounts for 35.15 gram (53.04 percent) of the total followed by fish 9.70 gram (14.63 percent), vegetables 4.96 gram (7.48 percent), pulses 3.47 gram (5.23 percent) and meat/poultry/egg 5.56 gram (8.39 percent) in 2010. In rural areas, the second highest contribution of 9.05 gram (14.08 percent) was from fish followed by vegetables at 5.04 gram (7.84 percent). In the urban areas, the second highest contribution after cereals is from fish followed by meat, poultry and egg.

Chart-10 Per Capita Per Day Protein Intake (in Gram)

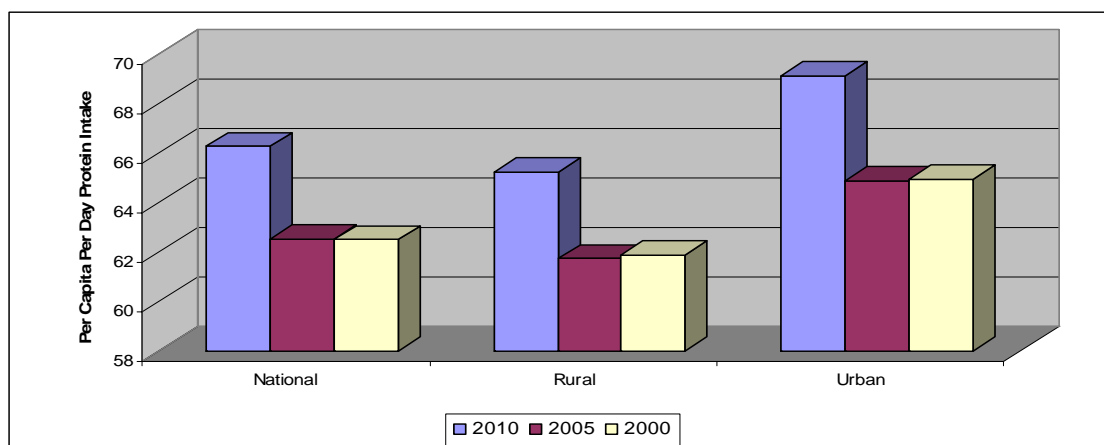

Table 5.8 provides the percentage distribution of protein intake by different food items. It shows that 53.0 percent of total protein intake in 2010 came from cereals where rice alone contributed 45.7 percent. The other major protein contributing food items were fish (14.6 percent), meat, poultry, egg (8.4 percent), pulses (5.2 percent), vegetables (7.5 percent), potato (3.2 percent), condiments/spices (2.8 percent), fruits (1.4 percent), milk and milk products (1.8 percent) and miscellaneous items (2.1 percent).

Table 5.8: Percentage Distribution of Protein Intake by Food Items

Food Group	National		Rural		Urban

Chapter-VI

Measurement of Poverty

This chapter deals with the measurement of poverty. Poverty is measured by different methods; but the Cost of Basic Needs (CBN) method has some advantages over other methods. Poverty estimates based on this method are used by planners, policy makers and international agencies in Bangladesh. In addition, for the convenience of the users, poverty data have been classified by socioeconomic characteristics of the population in this chapter.

6.1 Cost of Basic Needs (CBN) Method

Since 1995-96, Bangladesh Bureau of Statistics is using the Cost of Basic Needs (CBN) method as the standard method for estimating the incidence of poverty. In this method, two poverty lines are estimated:

- I. Lower poverty line
- II. Upper poverty line

A brief description (details are at Appendix C) of estimating incidence of poverty using CBN method is as follows:

a) Food poverty line

- 1) A basic food basket (eleven food items) is selected.
- 2) The quantities in the basket are scaled according to the nutritional requirement of 2,122 k.cal per person per day.
- 3) The cost of acquiring the basket is calculated. This estimated cost is taken as the Food Poverty Line (FPL)

b) Nonfood poverty line

A nonfood poverty line is calculated by estimating the cost of consuming non-food items by the households close to the food poverty line.

Lower Poverty Line

The extreme poor households are those households whose total expenditures on food and nonfood combined are equal to or less than the food poverty line.

Upper Poverty Line

The upper poverty line is estimated by adding together the food and nonfood poverty lines. The moderate poor households are those households whose total expenditures are equal to or less than the upper poverty line.

For estimating the poverty incidence with HIES 2010 data, several options were tested. Finally, for ensuring comparability and transparency, the following option was adopted for estimating poverty incidence using HIES 2010. The option includes:

- i) Updating of food poverty lines of 2005 with food price inflation rates calculated from the unit values of HIES 2005 and HIES 2010 data.
- ii) Re-estimating nonfood poverty line using HIES 2010 data to adjust to changes in nonfood-food ratios.

The above option has been preferred since the relative prices of food and non-food may have changed significantly since 2005, so that the assumption of constant nonfood-food price ratios will not be realistic.

6.2 Head Count Rate using CBN Method

The Head Count Rate (HCR) of poverty provides the estimate of the percentage of people living below the poverty line as a share of total population. In CBN method, it is a process of counting the poor on the consumption expenditure threshold (Appendix C) and which is expressed in percentage term. The estimates of Head Count Rate of HIES 2010 and HIES 2005 for upper and lower poverty lines are given in Table 6.1.

Table 6.1: Head Count Rates of Incidence of Poverty (CBN Method), 1991-92 to 2010

Years of HIES	Upper Poverty Line			Lower Poverty Line		
	National	Rural	Urban	National	Rural	Urban
2010	31.5	35.2	21.3	17.6	21.1	7.7
2005	40.0	43.8	28.4	25.1	28.6	14.6
2000	48.9	52.3	35.2	34.3	37.9	20.0
1995-96	50.1	54.5	27.8	35.2	39.5	13.7
1991-92	56.7	58.8	42.8	41.1	43.8	24.0

Using the upper poverty line in HIES 2010, HCR of incidence of poverty are estimated at 31.5 percent at the national level, 35.2 percent in rural area and 21.3 percent in urban area. In HIES 2005, these rates were 40.0 percent at national level, 43.8 percent in rural area and 28.4 percent in urban area respectively. The HCR recorded a reduction by 8.5 percentage points (1.7 percent per annum) at national level, 8.6 percentage points in rural area and 7.1 percentage points in urban area during the period 2005 to 2010. In 1991-92 the HCR of poverty was 56.7 percent at national level. In about twenty years, it recorded 25.2 percentage points reduction and Bangladesh is close to achieving the Millennium Development Goal (MDG) of halving the poverty incidence by 2015.

Using the lower poverty line, in HIES 2010, the HCR of incidence of poverty is estimated at 17.6 percent at national level, 21.1 percent in rural area and 7.7 percent in urban area. In HIES 2005, these rates were 25.1 percent at national level, 28.6 percent in rural area and 14.6 percent in urban area respectively. Thus HCR recorded a reduction by 7.5 percent at national level, 7.5 percent in rural area and 6.9 percent in urban area during the period 2005 to 2010. Using the lower poverty line, the HCR of incidence of poverty was 41.1 percent in 1991-92. Now, it is less than half (17.6 percent) and Bangladesh seems to have already achieved the MDG target of reducing the incidence of extreme poverty by half by 2015.

The standard errors of HCR are estimated at 0.88 percent in the case of the upper poverty line and 0.68 percent for the lower poverty line. These are statistically insignificant at 95 percent confidence interval. For details see Appendix D.

6.3 Head Count Rates (HCR) of Poverty by Divisions

The HCR of incidence of poverty by seven administrative divisions with rural and urban break down are presented in Table 6.2. It may be noted here that Rangpur division has been formed very recently. For convenience of the users, data for former Rajshahi division and new Rajshahi and Rangpur divisions are given separately for HIES 2010.

Table-6.2: Incidence of Poverty (Head Count Rate) by Cost of Basic Needs Method by Divisions

Poverty Line and Division	2010			2005		
	National	Rural	Urban	National	Rural	Urban
1. Using Lower Poverty Line						
National	17.6	21.1	7.7	25.1	28.6	14.6
Barisal	26.7	27.3	24.2	35.6	37.2	26.4
Chittagong	13.1	16.2	4.0	16.1	18.7	8.1
Dhaka	15.6	23.5	3.8	19.9	26.1	9.6
Khulna	15.4	15.2	16.4	31.6	32.7	27.8
Rajshahi (Former)	21.6	22.7	15.6	34.5	35.6	28.4
-Rajshahi (New)	16.8	17.7	13.2
-Rangpur	30.1	30.8	24.0
Sylhet	20.7	23.5	5.5	20.8	22.3	11.0
2. Using Upper Poverty Line						
National	31.5	35.2	21.3	40.0	43.8	28.4
Barisal	39.4	39.2	39.9	52.0	54.1	40.4
Chittagong	26.2	31.0	11.8	34.0	36.0	27.8
Dhaka	30.5	38.8	18.0	32.0	39.0	20.2
Khulna	32.1	31.0	35.8	45.7	46.5	43.2
Rajshahi (Former)	35.7	36.6	30.7	51.2	52.3	45.2
-Rajshahi (New)	29.8	30.0	29.0
-Rangpur	46.2	47.2	37.0
Sylhet	28.1	30.5	15.0	33.8	36.1	18.6

The estimates of HCR of poverty by Divisions using the upper poverty line in HIES 2010 reveal that Rangpur division has the highest incidence of poverty (HCR) at 46.2 percent, followed by Barisal division 39.4 percent and Khulna division 32.1 percent. On the other hand, Chittagang division has the lowest HCR of incidence of poverty at 26.2 percent followed by Sylhet division at 28.1 percent and Rajshahi division at 29.8 percent.

The incidence of poverty has significantly reduced in Chittagang division compared with other divisions which reduced to 26.2 percent in 2010 from 34.0 percent in 2005. The sharp reduction of HCR in Chittagang division using the upper poverty line may be attributed to its high reduction in urban area (11.8 percent) during the period. The urban HCR of poverty in Chittagang division came down to 39.0 percent in 2005 from 55.9 percent in 2000, a reduction of 16.9 percentage points during the period. The reduction of HCR of poverty is significant in urban areas of other divisions as well.

The estimates of HCR in 2010 using the lower poverty line show that Chittagong division has the lowest incidence of poverty of 13.1 percent followed by Khulna division at 15.4 percent and Dhaka division at 15.6 percent. The highest reduction of incidence of poverty using the lower poverty line in 2010 occurred in Khulna division which was 16.2 percentage points followed by Barisal division by 8.9 percentage points relative to 2005. On the other hand, poverty incidence in Sylhet division using the lower poverty line remained almost unchanged in 2010 and 2005 which were 20.7 percent and 20.8 percent respectively.

6.4 Poverty Gap (PG) and Squared Poverty Gap (SPG)

The Poverty Gap (PG) and Squared Poverty Gap (SPG), calculated by CBN method using lower and upper poverty lines, are presented in Table 6.3.

Table 6.3: Poverty Gap and Squared Poverty Gap (in percent) by CBN Method, 2010 & 2005

Poverty Line and Division	Poverty Gap			Squared Poverty Gap		
	National	Rural	Urban	National	Rural	Urban
2010						
1. Using Lower Poverty Line						
National	3.1	3.7	1.3	0.8	1.0	0.4

Dhaka	6.2	8.1	3.3	1.8	2.4	0.9
Khulna	6.4	6.1	7.4	2.0	1.9	2.3
Rajshahi (New)	6.2	6.4	5.6	1.9	1.9	1.7
Rangpur	11.0	11.3	8.6	3.5	3.6	2.7
Sylhet	4.7	5.0	2.7	1.3	1.3	0.9
2005						
1. Using Lower Poverty Line						
National	4.6	5.3	2.6	1.3	1.5	0.7
Barisal	9.1	9.6	6.4	3.3	3.4	2.6
Chittagong	2.2	2.7	0.9	0.5	0.6	0.2
Dhaka	3.6	4.9	1.5	1.0	1.4	0.3
Khulna	6.2	6.3	5.5	1.7	1.7	1.7
Rajshahi	6.4	6.5	5.5	1.8	1.8	1.6
Sylhet	3.4	3.7	1.9	0.8	0.8	0.5
2. Using Upper Poverty Line						
National	9.0	9.8	6.5	2.9	3.1	2.1
Barisal	15.5	16.3	10.7	6.3	6.6	4.3
Chittagong	6.3	6.5	5.6	1.7	1.7	1.6
Dhaka	6.9	8.6	4.0	2.1	2.7	1.1
Khulna	10.8	10.4	12.3	3.5	3.2	4.6
Rajshahi	11.9	12.0	11.4	3.8	3.8	3.9
Sylhet	7.2	7.6	4.5	2.1	2.2	1.5

The Poverty Gap (PG) estimates the depth of poverty of the population. The HCR of poverty gives only the percentage value of poverty incidence, but it does not measure the distance of the poor households from the poverty line. The FGT method provides a technique to estimate the average distance of the poor households from the poverty line. The estimates of the poverty gap using FGT method by using both the lower and upper poverty lines are presented in Table 6.3.

In HIES 2010, using the lower poverty line, PG is estimated at 3.1 percent at the national level. It has recorded a reduction of 1.5 percentage points since 2005. For the upper poverty line, the PG is estimated at 6.5 percent in 2010. It has recorded 2.5 percentage points reduction over 2005. All these reductions of PG indicate that the average consumption level of the people living below the poverty lines improved during the period 2005 to 2010.

Using the lower poverty line, estimates of PG by divisions reveal that Chittagong division has recorded the lowest PG which is estimated at 2.2 percent in 2010. The GP is the highest for Barisal division and is recorded at 5.4 percent. Using the upper poverty line, Sylhet division recorded the lowest PG at 4.7 percent in 2010. The same was highest for Barisal division at 15.5 percent in 2005. The PG has decreased for the remaining divisions during the period 2005 to 2010.

The Squared Poverty Gap (SPG) measures the severity of the poverty. This has been estimated by FGT method using both lower and upper poverty lines. At the national level, using the lower poverty line, it is estimated at 0.8 percent in 2010 which was 1.3 percent in 2005. Using the upper poverty line, the SPG is estimated at 2.0 percent in 2010 and its value was 2.9 percent in 2005. This indicates that the severity of poverty has reduced during the period 2005 to 2010. Using the upper poverty line, Sylhet division has recorded the lowest SPG which was 1.3 percent in 2010.

The standard error of PG for the lower poverty line is estimated at 0.15 percent and, for the upper poverty line, its value is 0.24 percent. The standard error of SPG for the lower poverty line is 0.05 percent and for the upper poverty line, it is 0.09 percent. The values are not significant at 95 percent confidence interval. For details see Appendix D.

6.5 Incidence of Poverty (CBN) by Size of Household

The estimation of incidence of poverty by size of household is shown in Table 6.4.

Table 6.4: Incidence of Poverty (CBN) by Size of Household, 2010

Household Size (Number of Person)	Percentage of Population Below Poverty Line					
	2010			2005		
	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7
1. Using Lower Poverty Line						
All size	17.6	21.1	7.7	25.1	28.6	14.6
1-2	7.5	9.3	2.8	8.8	10.2	4.2
3-4	11.8	14.5	5.1	20.0	23.8	10.5
5-6	19.7	23.4	9.0	28.3	32.1	16.5
7-8	28.2	32.5	12.4	29.9	31.7	23.1
9-10	21.9	24.6	14.2	31.4	35.9	12.4
11+	15.6	19.9	1.5	15.2	16.5	11.2
2. Using Upper Poverty Line						
All size	31.5	35.2	21.3	40.0	43.8	28.4
1-2	15.1	18.0	7.6	19.1	21.8	10.2
3-4	24.4	27.5	16.9	33.3	37.6	22.6
5-6	35.1	38.8	24.4	43.6	47.5	31.5
7-8	44.0	47.0	33.0	46.6	48.5	39.7
9-10	37.2	41.8	24.4	44.8	48.2	30.6
11+	25.2	29.9	9.5	35.5	41.5	17.7

In HIES 2010, the estimates of HCR of incidence of poverty using the lower poverty line by household size (number of members in the household) show that the lowest HCR is 7.5 percent at the national level for households having number of household members 1-2 which corresponds to 9.3 percent in rural area and 2.8 percent in urban area. In 2005, the corresponding rates were 8.8 percent, 10.2 percent and 4.2 percent showing improvement of HCR of this size of family all over the country. On the other hand, HCR of poverty using lower poverty line is the highest for the family size 7-8 which is recorded at 28.2 percent which was 29.9 percent in 2005. It appears that HCR increases with the increase of household size up to member size 7-8 and starts falling afterwards as household size increases.

The estimates using the upper poverty line show similar patterns as the HCR estimate using the lower poverty line.

6.6 Incidence of Poverty (CBN) by Age of Head of Household

The estimates of Head Count Rate of incidence of poverty by age of head of household are presented in Table 6.5.

Table 6.5: Incidence of Poverty (CBN) by Age of Head of Household, 2010

Age of Head in Years	Percentage of Population Below Poverty Line					
	2010			2005		
	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7
1. Using Lower Poverty Line						
All Age	17.6	21.1	7.7	25.1	28.6	14.6
<=29	19.4	22.8	9.1	30.2	34.0	20.1
30-39	21.6	26.4	9.3	32.1	37.8	16.4
40-49	17.3	21.2	7.3	26.0	29.8	15.0
50-59	13.7	16.9	5.4	19.7	22.4	11.9
60+	15.6	17.6	8.0	18.3	19.9	11.0
2. Using Upper Poverty Line						
All Age	31.5	35.2	21.3	40.0	43.8	28.4
<=29	35.6	39.5	24.1	45.9	50.1	34.6
30-39	37.0	42.0	24.1	47.7	52.4	34.9
40-49	31.4	34.9	22.4	40.7	45.8	26.1
50-59	25.8	29.4	16.4	33.5	37.7	21.5
60+	28.1	30.5	19.2	33.1	34.4	27.3

The estimates of HCR of incidence of poverty by age of head of households show similar pattern in 2010 and 2005 both for the lower and upper poverty lines. At the beginning, the HCR increases for the age <=29 to 30-39 of head and then falls for the subsequent age groups. The lowest HCR of poverty is found for the head of age group 60+. This reflects the existence of more earners in the large family.

6.7 Incidence of Poverty (CBN) by Selected Household Characteristics

The estimates of HCR of incidence of poverty (CBN) by selected household characteristics using both upper and lower poverty lines are presented in Table 6.6.

Table 6.6: Incidence of Poverty (CBN) by Selected Household Characteristics by CBN Method, 2010

Characteristics of Households	2010			2005		
	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7
1. Using Lower Poverty Line						
National	17.6	21.1	7.7	25.1	28.6	14.6
Gender of head:						
Male	17.9	21.5	7.9	25.4	29.0	14.5
Female	14.6	17.3	5.5	21.9	23.6	16.2
Marital Status:						
Married	17.5	21.1	7.6	25.0	28.5	14.4
Unmarried	10.7	9.6	13.5	17.2	19.7	11.1
Widowed/Divorced	19.4	22.9	7.6	29.6	32.3	20.0
Religion:						
Muslim	17.8	21.4	8.0	24.9	28.3	15.0
Non Muslim	15.5	18.8	4.5	26.6	30.3	10.4
1. Using Upper Poverty Line						
National	31.5	35.2	21.3	40.0	43.8	28.4
Gender of head:						
Male	32.1	35.9	21.7	40.8	44.9	28.7
Female	26.6	29.3	17.5	29.5	31.0	24.4
Marital Status:						
Married	31.4	35.1	21.1	40.3	44.1	28.4
Unmarried	23.3	22.4	25.5	29.9	32.7	22.8
Widowed/Divorced	33.9	37.2	22.8	39.2	42.0	28.9
Religion:						
Muslim	31.6	35.2	21.6	39.2	42.9	28.7
Non-Muslim	31.1	34.7	18.7	45.7	50.4	25.0

The HCR of incidence of poverty is found significantly less for female headed households than that of male headed households. In HIES 2010 using the upper poverty line, the HCR of incidence of poverty by sex of head of household is estimated at 26.6 percent for the female headed households whereas it is 32.1 percent for male headed ones. In the rural area, HCR is 29.3 percent for the female headed households and 35.9 percent for the male headed households. In the urban area, the HCR is 17.5 percent for the female headed and 21.7 percent for the male headed households respectively. In 2010, the HCR of incidence of poverty using the lower poverty line is estimated at 14.6 percent for the female headed households whereas it is 17.9 percent for the male headed households. In the rural area, the HCR of female headed households is 17.3 percent whereas it is 21.5 percent for the male headed households. In urban area these rates are 5.5 percent and 7.9 percent respectively.

It appears that HCR of incidence of poverty by marital status using the upper poverty line is 31.4 percent for the married, 23.3 percent for the unmarried and 33.9 percent for the widowed/divorced persons. Using the lower poverty line, the HCR of incidence of poverty by marital status are 17.5 percent for the married, 10.7 percent for the unmarried and 19.4 percent for the widowed/divorced. The HCR of poverty reduced for all these categories during the period 2005 to 2010.

Using the upper poverty line, the HCR was 31.6 percent for the Muslims and 31.1 percent for the non-Muslims in 2010. For the lower poverty line, the HCR by religion is 17.8 percent for the Muslims and 15.5 percent for the non-Muslims.

6.8 Incidence of Poverty (CBN) by Educational Statistics

The estimates of incidence of poverty (CBN) by educational status using lower and upper poverty lines are presented in Table 6.7.

Table 6.7: Incidence of Poverty (CBN) by Educational Status, 2010

Characteristics of Households	2010			2005		
	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7
1. Using Lower Poverty Line						
National	17.6	21.1	7.7	25.1	28.6	14.6
Literacy status:						
Illiterate	25.1	27.2	15.6	36.3	37.5	29.9
Literate	9.2	12.4	3.3	12.3	15.3	6.7
Educational level:						
No education	25.1	27.1	15.6	36.3	37.4	30.3
Completed class I-IV	15.8	18.4	7.9	19.3	21.8	12.6
Completed class V-IX	11.4	13.8	5.4	15.8	17.5	11.1
Completed class SSC+	3.4	6.1	0.8	4.4	7.1	1.9
2. Using Upper Poverty Line						
National	31.5	35.2	21.3	40.0	43.8	28.4
Literacy status:						
Illiterate	42.8	43.5	39.4	54.7	55.1	52.3
Literate	19.0	23.3	11.4	23.0	27.0	15.7
Educational level:						
No education	42.8	43.5	39.4	54.7	55.0	52.8
Completed class I-IV	35.7	38.1	28.3	37.5	39.2	33.0
Completed class V-IX	22.6	24.9	16.7	29.0	30.9	23.8
Completed class SSC+	7.5	11.2	3.9	9.3	12.2	6.5

Traditionally, incidence of poverty is high among the illiterates. The 2010 survey findings reveal similar results. In 2010, the estimates of HCR poverty by literacy status using the upper poverty line are 42.8 percent for the illiterates and 19.0 percent for the literates. It is 23.8 percentage points higher among the illiterates than among the literates. In 2005, it was 54.7 percent for the illiterates and 23.0 percent for the literates. It shows significant reduction of HCR of poverty among the illiterates during the period 2005 to 2010.

Using the lower poverty line HCR of poverty by educational status are 25.1 percent for the illiterates and 9.2 percent for the literates in 2010. The HCR is 15.9 percentage points higher among the illiterates than among the literates. In 2005, it was 36.3 percent for the illiterates and 12.3 percent for the literates.

The HCR of incidence of poverty by educational status shows a high negative correlation with educational status. The HIES 2010 data show that, poverty incidence decreases as educational status increases. The estimates show that HCR using the upper poverty line is 42.8 percent for no education, 35.7 percent for grade I-IV, 22.6 percent for grade V-IX and 7.5 percent for SSC and above. The estimates of HCR using the lower poverty line are 25.1 percent for no education, 15.8 percent for grade I-IV, 11.4 percent for grade V-IX and 3.4 percent for SSC and above.

6.9 Incidence of Poverty (CBN) by Main Occupation of the Heads of Households and Residence

Estimates of incidence of poverty by main occupation of the head of households using both lower and upper poverty lines have been presented in table 6.8.

Table-6.8: Incidence of Poverty by Main Occupation of Head of Household

Residence and Occupation of Head	Percentage of population the below poverty line			
	Using the Poverty Line			
	2010		2005	
	Lower	Upper	Lower	Upper
National				
Total	17.6	31.5	25.1	40.0
Professional, Technical & related Works	10.6	19.5	16.1	25.7
Administrative & Management Works	0.5	0.8	2.4	9.8
Clerical related works & Govt. Executive	8.5	17.7	29.4	44.1
Sales Workers	10.3	22.3	16.7	30.5
Service Workers	26.1	44.2	25.3	40.7
Agriculture, Forestry & Fisheries	22.2	37.0	31.5	48.2
Production, Transport labours	21.5	41.0	23.6	42.2
Head not working	12.6	24.2	17.0	27.5
Rural				
Total	21.1	35.2	28.6	43.8
Professional, Technical & related Works	15.0	24.8	18.5	28.0
Administrative & Management Works	1.2	1.8	12.6	38.4
Clerical related works & Govt. Executive	15.5	23.5	36.6	51.8
Sales Workers	14.6	27.1	21.7	36.5
Service Workers	30.9	49.1	31.4	48.3
Agriculture, Forestry & Fisheries	22.5	36.8	32.0	48.5
Production, Transport labours	28.9	47.9	30.6	49.2
Head not working	15.7	28.1	18.5	29.8
Urban				
Total	7.7	21.3	14.6	28.4
Professional, Technical & related Works	4.3	11.9	11.7	21.7
Administrative & Management Works	0.0	0.0	0.0	3.0
Clerical related works & Govt. Executive	4.6	14.5	18.0	32.0
Sales Workers	4.7	16.0	9.6	22.2
Service Workers	16.6	34.4	16.5	29.7
Agriculture, Forestry & Fisheries	16.7	40.0	24.7	44.8
Production, Transport labours	10.7	30.7	14.2	32.7
Head not working	4.0	13.6	12.1	20.0

In HIES 2010, the estimates of HCR using the upper poverty line by occupation of head of household were recorded at 44.2% for service workers, 41.0% for production, transport labourers, 37.0% for agriculture, forestry and fisheries, 31.5% for professional, technical & related workers and 24.2% heads not working, 22.3% sale workers, 19.5% for professional, technical & related workers and 17.7% for clerical related workers & govt. executives. The estimates of HCR using the lower poverty line by occupation of head of household were

recorded at 26.1% for service workers, 22.2% for agriculture, forestry and fisheries, 21.5% for production, transport labourers, 12.6 for heads not working, 10.6% for professional, technical & related workers and 10.3% for sale workers.

In HIES 2005, the estimates of HCR using the upper poverty line were found 48.2% for agriculture, forestry and fisheries, 44.1% for clerical and related workers, 42.2% for production, transport and related workers, 40.7% for service workers, 30.5% for sales workers, 27.5% for heads not working, 25.7% for professional, technical and related workers and 9.8% for administrative management workers. Using the lower poverty line, the estimates of HCR of head of households were 31.5% for agriculture, forestry and fisheries, 29.4% for clerical and related workers, 25.3% for service workers, 23.6% for production, transport and related workers, 17.0% for the heads not working, 16.7% for sales workers, 16.1% for professional, technical and related workers and 2.4% for administrative management workers.

6.10 Incidence of Poverty (CBN) by Ownership of Land

The estimates of incidence of poverty (CBN) by ownership of land using both lower and upper poverty lines are presented in Table 6.9.

Table 6.9: Incidence of Poverty (CBN) by Ownership of Land, 2010

Size of Land Holding (Acres)	Percentage of Population Below Poverty Line					
	2010			2005		
	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7
1. Using Lower Poverty Line						
All size	17.6	21.1	7.6	25.1	28.6	14.6
No land	19.8	33.8	9.9	25.2	49.3	17.8
<0.05	27.8	35.9	12.3	39.2	47.8	23.7
0.05-0.49	17.7	22.1	5.4	28.2	33.3	11.4
0.50-1.49	13.3	15.2	2.4	20.8	22.8	9.1
1.50-2.49	7.6	8.6	1.8	11.2	12.8	2.7
2.50-7.49	4.1	4.3	2.7	7.0	7.7	3.0
7.50+	3.7	4.2	0	1.7	2.0	0.0
2. Using Upper Poverty Line						
All size	31.5	35.2	21.3	40.0	43.8	28.4
No land	35.4	47.5	26.9	46.3	66.6	40.1
<0.05	45.1	53.1	29.9	56.4	65.7	39.7
0.05-0.49	33.3	38.8	17.4	44.9	50.7	25.7
0.50-1.49	25.3	27.7	12.1	34.3	37.1	17.4
1.50-2.49	14.4	15.7	6.6	22.9	25.6	8.8
2.50-7.49	10.8	11.6	5.5	15.4	17.4	4.2
7.50+	8.0	7.1	14.6	3.1	3.6	0.0

Traditionally, the poor are land poor i.e. they have less land to support their families. There exists strong negative correlation between land ownership and incidence of poverty. That is, as land size increases, the incidence of poverty decreases. Bangladesh still has an agriculture-dominant economy where about 48 percent of the people live on agriculture. In HIES 2010, the estimates of HCR of incidence of poverty by ownership of land using the upper poverty line, are found to be 35.4 percent for landless households, 45.1 percent for the owner of land less than 0.05 acre, 33.3 percent for owner of 0.05-0.49 acre land, 25.3 percent for 0.50-1.49 acre land, 14.4 percent for 1.50-2.49 acre land, 10.8 percent for 2.50-7.49 acre land and 8.0 percent for the owner of 7.50 acre or more land. In 2010, the estimates of HCR by ownership land using the lower poverty line are found to be 35.4 percent for no land, 45.1 percent for land size 0.05 acre or less, 33.3 percent for 0.05 to 0.49 acre, 25.3 percent for 0.50-1.49 acre, 14.4 percent for 1.50-2.49 acre, 10.8 percent for 2.50-7.49 acre and 8.0 percent for 7.50 acre or more land. The HCR of the landless households is lower than the small land owners mainly due to their involvement in non-agricultural activities which provides them with income enough to escape poverty through engaging in various non-farm economic activities.

6.11 Per Capita Income of the Poor

Table 6.10 shows the per capita income of the poor using upper and lower poverty lines. Using the lower poverty line, per capita income of the poor in nominal terms at the national level is Tk. 1102.84 at national level, Tk. 1083.72 in the rural area and Tk. 1250.18 in the urban area in 2010. In HIES 2005, these were Tk. 646.51 at the national level, Tk. 630.53 in rural area and Tk. 741.52 in urban area. On the other hand, using the upper poverty line at national level, the per capita nominal income of the poor is Tk. 1270.93 at the national level, Tk. 1211.57 in the rural area and Tk. 1545.96 in the urban area. In 2005, these were Tk. 731.73 at the national level, Tk. 703.98 in rural area and Tk. 862.40 in urban area. On average, the per capita income of the poor recorded nearly 74 percent increase in 2010 over that in 2005.

In 2010, using the lower poverty line, per capita income of the poor is highest in Dhaka division at Tk. 1159.30 followed by Rajshahi division at Tk. 1119.90 and Rangpur division at Tk. 1100.35. In 2005, the same was highest in Khulna division at Tk. 669.23 followed by Dhaka division at Tk. 650.01, Chittagong division at Tk. 648.71, Barisal division at Tk. 646.60, Rajshahi division at Tk. 640.77 and Sylhet division at Tk. 596.40. In 2010, using the upper poverty line, per capita income of the poor is highest in Dhaka division at Tk 1406.36 followed

by Chittagang division at Tk. 1307.27, Khulna division at Tk. 1226.21 and Rajshahi division at Tk. 1200.34. In 2005, using the upper poverty line Chittagong division had the highest per capita income of the poor which was recorded at Tk. 798.03 followed by Khulna division at Tk. 746.02, Dhaka division at Tk. 731.21, Rajshahi division at Tk. 708.46, Barisal division at Tk. 707.62 and Sylhet division at Tk. 667.50.

Table 6.10: Per Capita Income of the Poor (CBN), 2010

Division	Per Capita Income of the Poor					
	Using Lower Poverty Line			Using Upper Poverty Line		
2010						
National	1102.84	1083.72	1250.18	1270.93	1211.57	1545.96

6.12 Per Capita Expenditure of the Poor

Table 6.11 provides information on per capita expenditure of the poor using both upper and lower poverty lines. In 2010 using the lower poverty line, per capita expenditure of the poor is recorded at Tk. 1064.92 at national level and Tk. 1056.03 in the rural area. In 2005 using the lower poverty line, per capita expenditure of the poor was Tk. 576.47 at the national level, Tk. 570.39 in rural area and Tk. 612.64 in urban area. It recorded an average increase of nearly 85 percent in 2010 over the 2005 national level.

In 2010 using the upper poverty line, per capita expenditure of the poor is Tk. 1245.76 at national level, Tk. 1200.02 in the rural area and Tk. 1457.65 in the urban area. In 2005, it was

Tk. 656.91 at the national level, Tk. 639.82 in rural area and Tk. 737.35 in urban area. Thus the average increase has been nearly 90 percent in 2010 over the year 2005.

Using the lower poverty line, Chittagong division recorded the highest per capita expenditure with Tk. 1174.50 followed by Dhaka division at Tk. 1071.29, Sylhet division at Tk. 1049.43 and Barisal division at Tk. 1044.66. In 2005, Chittagong division recorded the highest per capita expenditure of the poor with Tk. 624.91 followed by Dhaka division at Tk. 609.17, Sylhet division at Tk. 592.30, Barisal division at Tk. 566.65 and Rajshahi division at Tk. 550.86. In 2010 using the upper poverty line, per capita expenditure of the poor is highest in Chittagong division at Tk. 1381.76 followed by Tk.1290.86 in Dhaka division, Tk.1212.64 in Khulna division and Tk. 1205.24 in Rajshahi division. In 2005, Chittagong division had the highest per capita expenditure of the poor at Tk. 731.20 followed by Dhaka division at Tk. 694.45, Khulna division at Tk. 593.91, Sylhet division at Tk. 661.77, Barisal division at Tk. 652.71, and Rajshahi division at Tk. 613.93.

CHAPTER-VII

EDUCATION

Education develops human skill for providing quality services to the community. Education is also termed as a human capital and it makes people fit for professional jobs. Education is recognized as one of the basic human needs. It has direct bearing to overall welfare of individuals as well as households and society. The Household Income and Expenditure Survey 2010 included a separate education module and collected a number of valuable information on education. This chapter deals with the status of education of the individuals and the impact of education on other aspects well being of the households. The aspects covered include literacy, level of education, type of school attended, school attendance, reasons of absence from schools, school enrolment, source of drinking water by educational attainment and excreta disposal facility by educational attainment.

7.1 Literacy Rate

The literacy rate of population 7 years and over has been defined by the ratio of population 7 years and over who can write a letter to the total population in the same age group and expressed in percentage. The literacy rate of population aged 7 years and over by sex and residence is presented in Table 7.1. In 2010, the literacy rate is estimated at 57.91 percent at national level which is 61.12 percent for the male and 54.80 percent for the female population. In rural area, literacy rates of total, male and female population are 53.37 percent, 56.67 percent and 50.21 percent respectively. In urban area, the literacy rates of total, male and female population are 70.38 percent, 73.10 percent and 67.67 percent respectively.

In 2005, literacy rate was 51.9 percent at the national level for both sexes with 46.7 percent in rural areas and 67.6 percent in urban areas. Literacy rate of male was 55.8 percent and that of female population was 48.1 percent. In rural area, male literacy rate was 50.4 percent compared with 72.0 percent in urban area. Similarly, female literacy rate was 42.9 percent in rural area as compared with 63.2 percent in urban area.

Table 7.1: Literacy Rate (7 years and over) by Gender and Administrative Division

- Rajshahi	54.35	52.54	62.76
- Rangpur	49.36	47.39	61.89
Sylhet	51.67	48.58	68.23

7.1.1 Sex Variations of Literacy Rate

In 2010, the literacy rate is estimated at 57.91 percent at national level which is 61.12 percent for male and 54.80 percent for female population. In rural area, literacy rates of total, male and female population are 53.37 percent, 56.67 percent and 50.21 percent respectively. In urban area, the literacy rates of total, male and female population are 70.38 percent, 73.10 percent and 67.67 percent respectively.

In 2005, literacy rate was 51.9 was at the national level for both sexes with 46.7 percent in rural areas and 67.6 percent in urban areas. Literacy rate of males was 55.8 percent and that of female population was 48.1 percent. In rural area, male literacy rate was 50.4 percent compared with 72.0

percent in urban area. Similarly, female literacy rate was 42.9 percent in rural area as compared with 63.2 percent in urban area.

7.1.2 Divisional Variations of Literacy Rate

The divisional level literacy rates have been provided in Table 7.1. At the aggregate level, the highest literacy rate 60.54 percent is observed in Chittagang division and the lowest of 54.68 percent in Rangpur division. In the rural area, the highest literacy rate is observed in Khulna division at 57.68 percent and the lowest in Sylhet division at 49.00 percent. For the urban area, the highest literacy rate is observed at 76.02 percent in Chittagang division and the lowest of 64.73 percent in Khulna division.

7.2 Level of Education

The level of education of population 5 years and over has been presented in Table 7.2. It is observed that, at the national level, among the population 5 years and over, 45.21 percent did not pass class I, 21.84 percent passed class I-V, 20.27 percent passed class VI-IX, 9.49 percent passed SSC, HSC or equivalent, 1.75 percent passed graduate or equivalent levels, 0.98 percent passed postgraduate level, 0.12 percent obtained engineering and medical degrees, 0.09 percent obtained diploma and vocational certificate and 0.26 percent obtained other educational qualification.

Table 7.2: Distribution of Population 5 Years and over by Level of Education 2010

Level of Education	Percent of Population		
	National	Rural	Urban

Others	0.08	0.08	0.08

7.2.1 Sex Variations in Level of Education

Sex variations in the level of education are obvious in the context of Bangladesh. Among males, 42.38 percent did not pass class I compared with 47.97 percent for females. The percentage of females who passed SSC, HSC or equivalent level of education was 8.08 percent as against 10.94 percent for males. Among males, the percentage of graduate and equivalent degree holders is 2.52 percent compared with 0.99 percent for females. The percentage of postgraduate degree holders is 1.41 percent for males as against 0.56 percent for females. The proportion of diploma and vocational training holders constitute 0.15 percent for males corresponding to only 0.03 percent for females.

The variations between males and females are also seen in the urban and rural areas. In the rural area, the percentage of males having SSC, HSC or equivalent educational level is 8.91 percent compared with 5.65 percent for females. In the urban area, the percentage of males with SSC, HSC or equivalent educational level is 16.44 percent compared with 14.91 percent for females. Such variations are also observed in other educational levels (Table 7.2).

7.3 Types of School Attended

The type of school attended by the students at the primary level is presented in Table 7.3. It is observed that 81.64 percent and 11.89 percent of the students attend fully government and government subsidized schools respectively at the national level. The government non-subsidized schools accommodate 1.77 percent, NGO run schools accommodate 2.52 percent, government recognized Madrasahs accommodate 1.72 percent and Quomi Madrasahs accommodate 0.45 percent of the students.

There exist variations in type of school attended between urban and rural areas. In the rural area, of the total students attending primary schools, 83.59 percent attend fully government schools and 10.25 percent attend schools subsidized by the government. The percentages of such schools in rural and urban areas are 83.59 percent and 75.18 percent respectively. Non subsidized schools in the rural area comprise 1.21 percent compared with 3.60 percent in the urban area. The NGO run schools comprise 2.56 percent in the rural area compared with 2.41 percent in the urban area. The government recognized Madrasahs accommodate 1.21 percent in urban area. The Quami Madrasahs accommodate 0.51 percent in the rural area compared with 0.27 percent in the urban area.

Table 7.3: Type of School Attended by Students at Primary Level by Residence

7.3.1 Sex Variation of Type of School Attended

The variation in types of schools for boys and girls is presented in Table 7.4. The table shows that there exists no substantial variation in types of school attended by boys and girls. For the boys, 80.73 percent are operated by government, 12.46 percent are government subsidized, 1.79 percent are government nonsubsidized, 2.02 percent are NGO run, 2.02 percent are recognized Madrasahs and 0.69 percent are Quomi Madrasahs. For the girls, 82.53 percent are operated by the government, 11.34 percent are subsidized by the government, 1.74 percent are non-subsidized by the government, 2.73 percent are NGO run, 1.43 percent are recognized Madrasahs and 0.23 percent are Quomi Madrasahs.

Table 7.4: Type of School Attended at the Primary Level by Gender and Residence

7.3.2 Divisional Variation in Types of School Attended

The types of school by administrative divisions of the country are well differentiated in the survey. Among the divisions, the number of government operated schools was the highest at 85.00 percent in Barisal division and lowest at 75.15 percent in Sylhet division. The proportion of government subsidized school was the highest in Sylhet division at 17.00 percent and the lowest at 8.58 percent in Barisal division. The percentage of non-subsidized schools was the highest in Dhaka division at 2.20 percent and lowest in Barisal division at 0.27 percent. The percentage of NGO run schools was the highest in Rajshahi division at 3.88 percent and lowest in Rangpur division at 1.15 percent. The percentage of recognized Madrasahs was the highest in Barisal at 3.00 percent and lowest in Khulna division at 0.82 percent.

7.4 School Attendance

The percentage distribution of students of age 5-29 years currently attending different levels of education are given by sex, residence and level of education in Table 7.5. It is observed that, among the school attending students, 42.70 percent are enrolled at the primary level i.e. Class I-V. The percentage of students attending secondary level schools (Class VI-IX) is 39.03 percent. In the post-secondary level (SSC & HSC), the percentage of students is 15.44 percent. After the secondary and higher secondary level, the percentage of students drops sharply which indicates that a large number of students studying at SSC and HSC level do not continue in higher levels. In the graduate and equivalent level, the percentage of students is 1.33 percent and that in post graduate level is 0.66 percent. The percentage of students in medical discipline is only 0.01 percent and that in engineering discipline is 0.12 percent.

Table 7.5: Distribution of Current Enrollment of Students by Level of Education, 2010

Level of Education	National			Rural			Urban		
	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female
1	2	3	4	5	6	7	8	9	10
Class I-V	42.70	44.90	40.68	44.87	47.29	42.63	37.48	39.11	35.99
Class VI-IX	39.03	35.39	42.39	40.05	35.54	44.22	36.57	35.02	38.00
SSC, HSC/equi	15.44	15.88	15.04	13.03	13.99	12.14	21.26	20.45	22.00
Graduate/equi	1.33	1.59	1.09	0.96	1.34	0.61	2.23	2.20	2.26
Post graduate	0.66	0.77	0.55	0.34	0.54	0.15	1.43	1.35	1.51
Doctor	0.01	0.01	0.01	0.00	0.00	0.00	0.04	0.04	0.04
Engineer	0.12	0.24	0.01	0.06	0.12	0.00	0.27	0.54	0.02
Others	0.70	1.22	0.23	0.70	1.19	0.25	0.72	1.31	0.17
Total	100	100	100	100	100	100	100	100	100

There exist rural-urban variations in school attendance of children. In the higher classes, proportions of students are higher in urban areas compared with rural areas. In the primary level (class I-V), the percentage of students in the rural area is 63.34 percent compared with 51.37 percent in the urban area. In the SSC/HSC or equivalent level, the percentage of students in the rural area is 10.30 percent as against 16.79 percent in the urban area. The percentages of students in the degree level for rural and urban areas are 1.56 percent and 5.84 percent respectively. The percentage of students in the post graduate level for the urban areas is almost three times higher than its rural share. The corresponding percentages are 0.43 percent and 1.13 percent for rural and urban areas. The percentage of students in medical discipline is insignificant in rural areas and 0.40 percent in the rural area. The higher proportion of students

in the post graduate level and engineering and medicine disciplines in the urban area is mainly due to availability of better educational facilities for these levels in the urban area.

7.4.1 Sex Variation in School Attendance

Sex variation in school attendance can be seen in Table 7.5. The variation is prominent from the higher secondary level. At the national level, the percentage of male students in the higher secondary level is 12.39 percent as against 11.47 percent for females. The percentage of students in the graduate and equivalent level is 3.20 percent for males and 2.06 percent for females. In the post graduate level, the percentage of male students is 0.89 percent, as against 0.32 percent for females. In the medical discipline, the percentage of female students is 0.10 percent compared with 0.05 percent for males. On the other hand, in the engineering discipline, the percentage of males is 0.08 percent compared with 0.02 percent for females.

There exist sex variations in rural and urban areas as well. In the rural area, the percentage of male students in SSC/HSC or equivalent educational level is 10.93 percent and that of females is 4.63 percent. In the graduate level, the percentage of male students in the rural area is 2.20 percent as against 0.99 percent for females. In the post graduate level, the percentage of male students is 0.71 percent which is 0.15 percent for females. No medical student is reported in the rural area. However, 0.08 percent males and 0.03 percent females are reported in the engineering discipline.

In the urban area, although there exist differences in percentage of males and females in different levels of education levels, it is not as sharp as in the rural area. In the SSC/HSC and equivalent educational level, the percentage of males is 16.76 percent compared with 16.82 percent for female. In the graduate and equivalent levels, the percentage of males is 6.49 percent compared with 5.18 percent for females in the urban area. The percentage of males in post graduate level is 1.43 percent in the urban area which is 0.81 percent for females. In the medical discipline, the percentage of male is 0.21 percent as against 0.54 percent for females. In the engineering discipline, the percentage of males is 0.7 percent with no female share.

7.5 School Enrolment

School enrolment in the age group 6-10 and 11-15 years is presented in Table 7.6. Enrolment is defined by the number of students enrolled in schools in the age group divided by the number of children in the age group expressed in percentage.

Table 7.6: Percentage of Children Enrolled in School by Residence and Sex

Gender and Division	Children Aged 6-10 Years			Children Aged 11-15 Years		
	National	Rural	Urban	National	Rural	Urban
1	2	3	4	5	6	7
BOTH SEXES	84.75	83.79	87.88	77.82	77.93	77.49

- Rajshahi	84.82	84.19	88.07	75.66	75.65	75.67
- Rangpur	81.68	80.85	87.96	71.44	71.63	70.21
Sylhet	73.43	72.47	80.00	64.74	64.56	66.04
GIRLS	86.99	86.42	88.89	83.67	83.77	83.37
Barisal	95.21	94.76	97.53	86.81	86.80	86.84
Chittagong	83.74	82.16	91.37	79.50	79.13	80.79
Dhaka	87.33	87.48	87.05	83.61	83.46	83.85
Khulna	90.43	90.29	90.89	88.86	89.61	85.98
Rajshahi(former)	88.46	88.22	89.91	89.60	90.46	85.41
- Rajshahi	89.81	89.11	93.22	90.57	91.00	88.82
- Rangpur	87.05	87.35	84.62	88.49	89.89	80.00
Sylhet	77.95	77.03	84.75	66.33	65.28	72.41

It is observed that the school enrollment rate in the age group 6-10 years is 84.75 percent at the national level. It is 83.79 percent in the rural area and 87.88 percent in the urban area. The school enrolment rate in the age group 11-15 years is lower than that of age group 6-10 years. It is 77.82 percent at the national level; 77.93 percent in the rural area and 77.49 percent in the urban area.

7.5.1 Sex Variation of Enrolment

There exists sex variation in the percentage of children enrolled in schools. At the national level, male enrolment is 82.61 percent compared with 86.99 percent for females in the age group 6-10 years. In the urban area, male enrolment is 86.95 percent as against 88.89 percent for females in the age group 6-10 years.

For the age group 11-15 years, the male enrolment is 72.41 percent compared with 83.67 percent for females at the national level. For the rural area, such enrolment rate is 72.49 percent for males and 83.77 percent for females. In the urban area, the enrolment rate for males is 72.17 percent and that of females is 83.37 percent.

7.5.2 Divisional Variation of Enrolment

There exists divisional variation in the school enrolment rate for the age group 6-10 years and 11-15 years which is given in Table 7.6.

At the aggregate level in the age group 6-10 years, the highest enrolment is observed in Barisal division which is 90.49 percent followed by Khulna division at 89.01 percent and Rajshahi division at 87.30 percent. In the same age group, for the rural area, the highest enrolment rate is also observed in Barisal division which is 90.49 percent followed by Khulna division at 88.65 percent and Rajshahi division at 87.30 percent. In the age group 6-10 years, for the urban area, the highest enrolment is observed in Barisal division at 94.61 percent followed by Chittagang division at 92.37 percent and Rajshahi division at 90.69 percent.

In the age group 11-15 years, at the aggregate level, the highest enrolment is found in Khulan division at 82.86 percent followed by Rajshahi division at 82.69 percent and Barisal division at 81.08 percent. Similar trend is also seen in the rural area. On the other hand, in urban area, the highest percentage of enrolment is observed in Barisal divison which is 84.71 percent followed by Rajshahi division at 82.26 percent and Chittagang division at 78.12 percent.

7.5.3 Enrolment by Poor and Non-poor Groups (11-15 years)

The enrolment in age group 11-15 years for poor and non-poor groups by sex and residence have been presented in Table 7.7. It is observed that there exist wide variations between poor and non-poor groups in enrolment. For both sexes, the enrolment rate for the poor at national level is 70.20 percent as against 85.52 percent for the non-poor. In the rural area, enrolment rate for the poor is 72.28 percent as against 85.25 percent for the non-poor. The urban enrolment rate of the poor is 60.75 percent as against 86.21 percent for the non-poor.

**Table 7.7: Enrolment Rate of Children Aged 11-15 by Poor/Non-Poor Status, 2010
(Lower Poverty Line)**

For males, the enrolment rate of the poor is 62.32 percent as against 82.06 percent for the non-poor. Such rate for rural males is 64.58 percent for the poor compared with 82.06 percent for the non-poor. The enrolment rate for the urban poor males is 53.63 percent as against 84.07 percent for the non-poor. The enrolment rates for females are marginally higher than those of males for both poor and non-poor. The enrolment rate for females of the poor group is 78.07 percent compared with 89.43 percent for the non-poor at the national level. The enrolment rate for rural and urban females are 79.52 percent and 70.19 percent respectively compared with 89.79 percent and 88.55 percent for the non-poor females in the rural and urban areas.

7.5.4 Enrolment of Children (6-10 years) by Poor and Non-poor Groups

Enrolment rates of children aged 6-10 years for poor and non-poor groups are presented in Table 7.8. It shows that there exist substantial differences in enrolment rates between poor and non-poor groups. The variation is also true in case of urban and rural areas and for males and females.

**Table 7.8: Enrolment Rate of Children Aged 6-10 by Poor /Non-Poor Status, 2010

Sylhet	66.71	65.22	82.35	85.20	85.12	85.71

The enrolment rate at the national level for both sexes is 78.33 percent for the poor compared with 89.00 percent for the non-poor. In the rural area, the rate is 78.48 percent for the poor and 87.92 percent for the non-poor. On the other hand, in the urban area, the rate is 77.54 percent for the poor and 91.71 percent for the non-poor.

For males, the enrolment rate at the national level for the poor is 74.20 percent as against 88.10 percent for the non-poor. In the rural area, the enrolment rate of the poor is 74.07 percent for males compared with 86.78 percent for the non-poor. In the urban area, the enrolment rates for the poor and non-poor males are 74.86 percent and 91.36 percent

respectively. For females, the enrolment rate at the aggregate level for the poor is 82.59 percent and, for the non-poor, it is 89.94 percent. In the rural area, the enrolment rate for females in the poor group is 83.00 percent and 89.11 percent in the non-poor group. In the urban area, the enrolment rates for females are 80.39 percent and 92.09 percent for the poor and non-poor groups respectively.

7.6 Gross Enrolment

Gross enrolment is defined by the ratio of students enrolled in the primary level (Class I-V) to the total population of age 6-10 years expressed in percentage. The table shows that the gross enrolment rate is 108.81 percent at the national level. For the rural area, the enrolment rate is 108.04 percent and for urban area it is 111.34 percent.

7.6.1 Sex Variation of Gross Enrolment

There exists variation in gross enrolment rate among boys and girls at all levels. At the national level, the gross enrolment rate for boys is 105.77 percent and it is 111.99 percent for girls. In the rural area, enrolment of boys is 104.82 percent which is 111.36 percent for girls. In the urban area, gross enrolment for boys is 108.79 percent as against 114.11 percent for girls.

Table 7.9: Gross Enrolment Rate (Percent) at Primary Level by Residence and Sex

Sex and division	National	Rural	Urban
1	2	3	4
Both Sexes	108.81	108.04	111.34

- Rangpur	112.80	113.44	107.69
Sylhet	99.25	98.23	106.78

Note:

1. *Gross Enrolment Rate (GER): [Number of children attending primary level (i.e, class I-V) divided by Numbr of children aged 6-10 years] multiplied by 100.*
2. *Numerator of GER: Raised sum (i.e, after applying expansion factors or weights to the data) of all individuals who report currently attending primary level (class I-V) in the 2000 HIES.*
3. *Denominator of GER: Raised sum (i.e, after applying expansion factors or weights to the data) of all individuals aged 6-10 years covered in the 2000 HIES.*

7.6.2 Divisional Variation of Gross Enrolment

There exist variations among divisions of the country in respect of gross enrolment. At the aggregate level, the highest gross enrolment of 116.81 percent is observed in Barisal division followed by Rajshahi division at 112.80 percent and Khulna division at 110.82 percent. In the rural area, highest gross enrolment also exists in Barisal division which is 117.07 percent followed by Rajshahi division at 111.98 percent and Khulna division at 110.45

percent. In the urban area, the highest gross enrolment is observed in Chittagong division at 119.64 percent followed by Rajshahi division at 116.94 percent and Barisal division at 115.57 percent.

7.7 Access to Drinking Water by Educational Attainment of Heads of Household and by Residence

Access to drinking water by educational attainment of heads of household is presented in Table 7.10. It shows that the access to safe drinking water is higher among the higher educational groups, particularly for supply water. Supply water as a source of drinking water for heads of household who are doctors is 75.86 percent at the national level compared with only 2.29 percent for illiterates.

Table 7.10: Access to Drinking Water by Educational Attainment of Heads of Household and by Residence

Source of drinking water	Educational Attainment							
	Illiterate	Class I-V	Class VI-IX	SSC /HSC	Graduate equivalent	Post Graduate	Doctor	Engineer

Other	0.92	0.51	0.81	0.32	0.09	1.17	0.00	0.00

7.8 Households by Excreta Disposal Facility and Educational Attainment

The status of households by excreta disposal facility and educational attainment of heads of household is presented in Table 7.11. It shows that the percentage of pucca latrine increases with educational qualification of the head of household. The percentage of household using pucca latrine is 39.98 percent in case of illiterates and is as high as 100 percent for doctors and engineers.

Table 7.11: Households by Excreta Disposal Facility and Educational Attainment of Head of Household and by Residence

Toilet Facilities	Total Illiterate	Class I-V	Class VI-IX	SSC / HSC	Graduate	Post Graduate	Doctor	Engineer
1	2	3	4	5	6	7	8	9
% of Household								
National

Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00
Urban								
Pucca	66.72	66.72	89.51	94.91	98.12	99.05	100.0	98.90
Katcha	27.11	27.11	8.92	4.75	1.88	0.95	0.00	1.10
Open Space	6.17	6.17	1.58	0.34	0.00	0.00	0.00	0.00
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

The access to pucca latrine is also high among higher education groups in both rural and urban areas. In the rural area, pucca latrine is used by 34.51 percent households with no education while such share for higher education groups particularly for engineers is 100 percent. Similar pattern is also observed in the urban area. In the urban area, access to pucca latrine is 64.92 percent for households with head being illiterate while all households use pucca latrine having doctors and engineers as heads of household.

7.9 Expenditure on Education

The expenditure on education per household and percentage of educational expenditure for both males and females are presented in Table 7.12. The average expenditure on education per household stood at Tk. 925. It can also be seen that per household expenditure on education in urban area is higher than similar expenditure in rural area. In urban area, per household educational expenditure is Tk. 1,796 whereas such expenditure in rural area is Tk.604. At the national level, 53.73 percent of the educational expenditure is incurred for males and 46.27 percent for females.

Table 7.12: Per Household and Per Capita Expenditure on Education

Residence	Per Household Expenditure on Education (Tk)	Percent of Expenditure Incurred by Sex	
		Male	Female
1	2	3	4
National	925	53.73	46.27
Rural	604	57.96	42.04
Urban	1796	49.78	50.22

In the rural area, 57.96 percent of the expenditure is incurred for males and 42.04 percent for females, whereas, in the urban area, the expenditure share for males is 49.78 percent and that for females is 50.22 percent.

7.10 Per Capita Income by Level of Education of Head and Sex

Per capita income of households by level of education and sex is presented in Table 7.13. It is observed that, at the national level, per capita income of male-headed households is Tk. 2,517 and that of female headed households is Tk. 4,119. Per capita income of households with illiterate head is Tk. 1,807 for the male headed and Tk. 2,262 for the female headed households. Per capita income of households with heads who passed class I-V is Tk. 2,205 for male and Tk. 3,291 for female headed households. On the other hand, per capita income of households with heads being graduate or equivalent educational level is Tk. 5,800 for male and Tk. 10,674 for female headed households. Average per capita income for male-headed households with heads as doctors is Tk. 24,064.

Table 7.13: Average Per Capita Income (Tk) by Residence and by Educational Level of Head

Educational Attainment	Average Per Capita Income (Tk)					
	National		Rural		Urban	
	Male	Female	Male	Female	Male	Female
1	2	3	4	5	6	7
No Class Passed	1807	2262	1730	2065	2161	3240
Class I-V	2205	3291	1994	3011	2828	4147
Class VI-IX	2711	3356	2499	3142	3192	3954
SSC/HSC equivalent	4098	5958	3342	6041	5109	5882
Graduate equivalent	5327	6109	3881	5883	6220	6121
Post graduate	5800	10674	3789	0	6604	10674
Doctor	24064	0	0	0	24064	0
Engineer	11822	0	5167	0	12603	0
Others	5477	2868	2171	0	8527	4119
Total	2517	4119	2083	2509	3704	4107

In the rural area, per capita income of male-headed households is Tk. 2,083 which is Tk. 2,509 for female headed households. Per capita incomes of illiterate male and female headed households are Tk.1,730 and Tk. 2,065 respectively. Per capita income of households with heads who passed class I-V is Tk. 1,994 for male and Tk. 3,011 for female headed households. The per capita income of male heads with SSC/HSC or equivalent is Tk. 3,342 which is Tk. 6,041 female headed households.

In the urban area, per capita income of male-headed households is Tk.3,704 which is Tk. 4,107 for female headed households. Per capita income of illiterate male headed households is Tk. 2,161 and similar income is Tk. 3,240 for illiterate female headed households. Per capita income of households with head having education of class I-V is Tk. 2,828 for male headed and Tk. 4,147 for female headed households. For heads with graduate or equivalent education, the per capita income of male headed households is Tk. 6,220 as against Tk. 6,121 for female headed households.

CHAPTER-VIII

HEALTH

Health is universally regarded as an important index of human development and constitutes one of the basic needs of the population. Access to health care facilities is a basic right of all citizens. In HIES 2010, a detailed health module was included in addition to core modules of income, expenditure and consumption. The module collected significant health related information including morbidity, treatment, expenditure on health, immunization and others. The key findings of health related information have been presented in this chapter.

8.1 Population Suffering Diseases

The distribution of population suffering from diseases over the last 12 months has been presented in Table 8.1. It shows that, among the type of diseases suffered in the preceding 12 months for both sexes, 24.02 percent suffered from gastric/ulcer followed by 14.01 percent from rheumatism/rheumatic fever and 10.53percent from high/low blood pressure. The pattern of chronic diseases is quite similar for males and females.

Table 8.1: Distribution of Population Suffered During Last 12 Months Chronic Diseases by Residence-2010

Type of Illness	National			Rural			Urban

It is observed that, in the rural area, 24.50 percent suffered from gastric ulcer followed by 15.06 percent from rheumatism/rheumatic fever and 8.94 percent from asthma/ respiratory diseases. Among females, 24.47 percent suffered from gastric ulcer followed by rheumatism/rheumatic fever for 17.06 percent.

In the rural and urban areas, the pattern of illness is rather similar. The prevalence of fever is lower in the urban area compared with rural area. In the rural area, 2.98 percent ailing people suffered from chronic fever as against 2.45 percent in the urban area. On the other hand, diseases like chronic heart disease, blood pressures etc are higher in the urban area. The prevalence of diseases like dysentery, rheumatism/rheumatic fever is higher in the urban area.

8.2 Diseases Suffered and Average Duration of Ailment

Diseases suffered in the last 12 months and the average duration of ailment in different diseases are presented in Table 8.2.

It is observed that, for the total population, average duration of ailment was 39 months for all sorts of diseases at the national level. The highest duration was observed in case of paralysis 161 months, followed by cancer 113 months and chronic heart disease 107 months.

Table: 8.2 Distribution of Population by Diseases Suffered in the Last 12 Months and Average Duration of Ailment

This pattern of illness is rather similar for males and females with some exceptions. In case of chronic fever, the average duration for males is 83 months whereas the same of females is 61 months. The average duration of gastric ulcer for males is 74 months and for females it is 78 months. In case of leprosy, the average duration of ailment for males is 110 months and for females 86 months.

There exist rural-urban variations in case of duration of diseases suffered by males and females. In the urban area, for both sexes, the highest duration of ailment is due to paralysis for 128 months followed by leprosy for 118 months and chronic heart disease for 110 months. On the other hand, in the rural area, for both sexes, the highest duration of ailment is found for paralysis for 167 months followed by cancer for 114 months and chronic heart disease for 105 months.

For males of rural area, the highest duration of ailment is observed for paralysis for 210 months, cancer for 138 months and high/low blood pressure for 112 months. On the other hand, in the urban area, the highest duration of ailment for females is paralysis for 143 months followed by cancer for 129 months and chronic heart disease for 120 months.

8.3 Diseases Suffered during Preceding 30 Days

Diseases suffered by persons in the preceding 30 days are presented in Table 8.3 It is observed that, at the aggregate level for both sexes, 58.37 percent suffered from fever, followed by pain by 9.94 percent and diarrhea by 5.16 percent. For males, 60.15 percent suffered from fever followed by pain by 7.82 percent and diarrhea by 5.60 percent. For females, 56.97 percent suffered from fever followed by pain by 11.82 percent and diarrhea by 4.78 percent.

There exists little variation in the types of disease suffered in the preceding 30 days between urban and rural areas and between males and females. In the rural area, among males the highest percentage of ailing patient suffered from fever which is estimated at 59.70 percent followed by pain by 8.16 percent and diarrhea by 5.52 percent. Among the females, 56.54 percent suffered from fever followed by pain by 12.14 percent and diarrhea by 4.69 percent. In the urban area, 59.83 percent suffered from fever followed by diarrhea by 5.2 percent and pain by 8.55 percent. For the females, 57.87 percent suffered from fever followed by pain by 10.46 percent and by diarrhea by 4.69 percent.

8.4 Reasons for Non Treatment

The reasons of non-treatment of ailing patients have been presented in Table 8.4. The main reason of non-treatment is the perceived non-serious nature of the disease by 56.54 percent followed by high cost of treatment by 15.57 percent and nonsupport from the family by 3.89 percent. Similar pattern is observed for males and females at the aggregate level. In the urban area, 69.98 percent did not receive any treatment as the problem was not considered serious, followed by high expenditure of treatment by 14.26 percent and for other reasons by 12.00 percent. For males in the urban area, 75.32 percent was not treated as the problem was not considered serious followed by other reasons by 14.24 percent and high cost of treatment by 7.19 percent. Among females in the urban area, 66.10 percent did not receive any treatment as the problem was not considered serious followed by 19.40 percent who did not resort to any treatment as the cost was high and 10.38 percent for other reasons. On the other hand, in the rural area, 57.15 percent did not undergo any treatment as the problem was not considered serious and 14.02 percent considered the treatment cost as high and 20.58 percent for other reasons. Among the rural females, 51.65 percent did not undergo any treatment as the problem was not considered serious followed by 17.15 percent for whom the cost was too high and 2.53 percent due to nonsupport of the family.

Total	100.00	100.00	100.00

The methods of treatment resorted by males and females are almost similar. At the national level, among males, 41.35 percent received treatment from compounder of pharmacy/dispensary followed by private doctor by 24.37 percent and from government doctors in private practice by 13.43 percent. Similarly for females, 39.20 percent received treatment from compounder located at the pharmacy/dispensary followed by private doctors by 24.54 percent and government. doctors in private practice by 15.16 percent.

There exist variations between rural and urban areas in respect of methods adopted by patients for their treatment. In the rural area, 41.20 percent of patients received treatment from compounder of the pharmacy/dispensary followed by government doctors in private practice by 25.04 percent and private doctors by 13.11 percent. On the other hand, in the urban area, 36.05 percent received treatment from compounder of pharmacy/dispensary followed by private doctors by 22.00 percent and government doctors in private practice by 19.57 percent. Among the patients in the rural area, 0.96 percent received treatment with Kabiraji/Hakemi/Auurbadi medicine compared with 1.33 percent in the urban area. A total of 3.26 percent of patients in the urban area received homeopathic system of medicine as against 3.49 percent of the rural patients. It is seen that NGO health workers reached 0.64 percent urban patients as against 0.31 percent of the rural patients.

8.6 Days Required for Consulting Doctor for the First Time After Ailment

Average days required by the ailing persons to consult the doctor for the first time after ailment are presented in Table 8.6.

At the national level, average days required by patients to consult doctor for the first time after ailment is 3.07 days; for the rural area, it is 2.87 days while for the urban area it is 3.93 days.

Table: 8.6 Days Required to Consult Doctor for the First Time After Ailment

Residence	Both Sex	Male	Female
1	2	3	4
National	3.07	2.74	3.36
Rural	2.87	2.61	3.99
Urban	3.93	3.31	4.46

Although the sex variation in respect of days required for consulting doctor after ailment is not very prominent, males in general are seen to consult doctors earlier than females. The average days required to consult doctors after ailment is 2.74 days for males, as against 3.36 days for females. In rural area, the average days required by males to consult a doctor after ailment is 2.61 days compared with 3.99 days for females. In the urban area, average days required for consulting doctor after ailment is 3.31 days for males and 4.46 days for females.

8.7 Sources of Medicine

The sources of medicine for the ailing patients are presented in Table 8.7. Most of the patients receive their medicine from pharmacy/dispensary which forms an overwhelming majority of 90.27 percent. Such percentages are 90.03 percent for the rural area and 91.25 percent for urban area.

The government health centres are the source of medicine for 2.69 percent of the patients at the national level, 2.70 percent in the rural area and 2.64 percent in the urban area. The NGO health centres are the source of medicine for 0.35 percent at the national level, 0.32 percent in the rural area and 0.49 percent in the urban area.

8.8 Mode of Payment for Medicine

The mode of payment for getting medicine has been classified into three categories, namely full payment, partial payment and no payment. At the aggregate level, 95.48 percent of the patients received medicine with full payment, 2.57 percent with partial payment and 1.95 percent received medicine without any payment.

As regards the mode of payment, 41.03 percent received medicine from government health centres on full payment, 20.13 percent received with partial payment and 38.84 percent received without any payment. On the other hand, 97.82 percent of the patients received medicine from pharmacy/dispensary on full payment followed by other shops from where 90.29 percent of the patients received medicine on full payment.

There exists some urban-rural variation in mode of payment by the patients in getting medicine from different sources. In the rural area, 15.90 percent received medicine from the NGO health centres free of cost but the share was 38.35 percent in the urban area. In the urban area, 33.81 percent of the patients received medicine free of cost from government health centres, 38.35 percent from NGO centres and 10.53 percent from other sources.

8.9 Means of Travel to Service/Treatment Providing Personnel

The means of travel to service/treatment providing personnel by patients are given in Table 8.9. Most of the patients reached the service/treatment personnel on foot which was 51.39 percent followed by 14.51 percent by auto-rickshaw/CNG and 13.30 percent by rickshaw/van.

There exists some variation between males and females in respect of means of travel to service/treatment personnel. Among the males, 52.64 percent reached the service/treatment personnel on foot followed by rickshaw by 13.74 percent and rickshaw van by 13.30 percent. On the other hand, among females, 50.27 percent reached service/treatment personnel on foot followed by rickshaw by 15.20 percent and rickshaw van by 13.19 percent.

There also exist rural-urban variations in means of reaching the service/treatment personnel by patients. Among the rural patients, 52.87 percent reached service/treatment personnel on foot. The other means of reaching the service/treatment personnel for the rural patients were rickshaw van by 14.43 percent and auto-rickshaw by 10.53 percent. In urban area, 45.12 percent reached service/treatment personnel on foot followed by rickshaw by 31.40 percent and rickshaw van by 8.48 percent.

8.10 Time Required in Reaching Service/Treatment Providing Personnel

Time required in reaching service/treatment personnel by ailing patients is presented in Table 8.10. The average time required to reach service/treatment personnel was 31 minutes for the country as a whole; 31 minutes for both males and females as well.

At the national level and for both sexes, average time required by engine boat was 158 minutes which was 103 minutes by bus and 55 minutes by ambulance. For males, the time required by engine boat was 210 minutes followed by 107 minutes by bus and 64 minutes by ambulance. For females, similar time required was 136 minutes by engine boat followed by 100 minutes by bus and 52 minutes by taxi.

There exist rural urban variations in respect of time required to reach the service/treatment personnel by ailing patients. In rural area, the highest time required by the patients to reach the service/treatment personnel was 279 minutes using engine boat and for urban area highest time required was 154 minutes by engine boat. In case of urban area, the average time required by patients to reach service/treatment personnel was 23 minutes while for the rural area it was 33 minutes.

8.11 Average Waiting Time

The average waiting time to get service/treatment of health personnel is presented in Table 8.11. At the national level, average waiting time was 19.55 minutes, which varied from 21.40 minutes for urban and 18.87 minutes for rural areas. At the national level, the waiting time to get the service of health personnel was 37.18 minutes for government doctors in private practice and 33.46 minutes for government doctors in government facilities. The lowest waiting time was observed for compounders of pharmacy/dispensary which was 10.04 minutes.

Total	18.87	19.08	18.68

There exist variations in rural and urban areas and also between males and females, in respect of waiting time to get services from health personnel. In the urban area, the highest waiting time of 77 minutes was found in case of NGO doctors; while for rural area the highest waiting time of 39.64 minutes was found for government doctors in private practice.

8.12 Preference for Particular Treatment Service

The reasons for preference of a particular service for treatment are presented in Table 8.12. The main reason of selecting a particular service was short distance; 32.55 percent of patients preferred a particular service for its short distance followed by quality of treatment by 30.66 percent and reasonable expense by 20.66 percent.

Table 8.12: Reasons for Preference of Specific Service/Treatment Facility, 2010

Other reasons	1.71	1.71	1.72
Total	100.00	100.00	100.00

There exist rural urban variations for reasons of preferring a particular service. In the urban area, 32.26 percent of the patients preferred any service/treatment facility due to short distance followed by quality of treatment by 30.52 percent and reasonable expenses by 18.95 percent. On the other hand, in the rural area, 32.62 percent of the patients preferred a particular treatment facility due to short distance followed by good quality of treatment by 30.69 percent and reasonable expenses by 21.06 percent. Good reputation of the attending physician was also an important reason for selecting a particular service. In rural area, 4.55 percent of the patients and in urban area 8.09 percent of the patients preferred a service for such a reason.

8.13 Average Time Spared by Treatment Providers

The patients' response regarding time spared by the treatment provider for the patients is presented in Table 8.13. At the national level, 93.58 percent of the patients reported that the time spared by the service providers was enough and 1.79 percent mentioned that it was not enough while 4.63 percent were not certain about it.

As regards rural-urban variations in respect of time spared by the treatment provider, 93.98 percent of the patients in rural area mentioned that they were satisfied with the time spared by the service provider as against 91.32 percent in the urban area.

8.14 Sources of Financing Medical Expenses

The sources of meeting medical expenses by patients are presented in Table 8.14. At the national level, 80.29 percent reported that they met the medical expenses from their regular income, 13.35 percent reported meeting from household saving and 2.03 percent reported meeting by borrowing from friends and relatives.

Table 8.14: Sources of Financing Medical Expenses, 2010

Source	National	Rural	Urban
1	2	3	4
From regular income	80.29	79.08	85.42
From household savings	13.35	13.82	11.37
Selling of household accessories	0.21	0.22	0.17
Selling of livestock	0.31	0.32	0.27
Selling of agricultural products/trees	0.30	0.36	0.04
Selling of permanent assets	0.11	0.11	0.14

Borrowing from money lender	0.60	0.71	0.17
Donated by friends and relatives	1.52	1.66	0.93
From other resources	1.18	1.29	0.68
Total	100.00	100.00	100.00

There exist variations with regard to means of meeting medical expenditure for rural and urban patients. In the rural area, 79.08 percent of the patients met their medical expenses from regular income, as against 85.42 percent for the urban patients. In the rural area, 13.82 percent of the patients met their medical expenses from household saving as against 11.37 percent for urban patients. In rural area, 2.35 percent of the households met their medical expenses by borrowing from friends and relatives which was 0.67 percent for the urban households.

8.15 Services Received by Mothers during Last Pregnancy

Services received by mothers by their place of check-up are presented in Table 8.15. Of the total, 35.68 percent of the mothers received check-ups during their last pregnancy in union health FP centers followed by the satellite clinic at 16.48 percent and hospitals at 16.29 percent.

Table 8.15: Services Received by Mothers during Last Pregnancy by Type of Service Centre, 2010

Place of Service Centre	% of mothers receiving service		
	National	Urban	Rural
1	2	3	4
Satellite clinic	16.48	14.10	17.62
Union health & family welfare centre	35.68	19.82	43.30
Thana health centre	15.93	14.77	16.49
District hospital	6.53	11.83	3.99
NGO health centre	2.84	3.61	2.48
medical college hospital	2.14	4.26	1.13
Private clinic/hospital/doctor	16.29	27.92	10.70
Others	4.10	3.70	4.29
Total	100.00	100.00	100.00

There exist rural-urban variations in respect of services received by mothers during last pregnancy. In the urban area, 27.92 percent of the mothers received services from private clinic/hospital/doctor followed by union health and family planning center at 19.82 percent and 14.77 percent at thana health centres. In the rural area, 43.30 percent of the mothers received treatment from union/ward health and family planning centres followed by satellite clinic at 17.62 percent and upazila health centers at 16.49 percent.

8.16 Mothers Receiving Medical Check-Ups within Six Weeks of Last Delivery

Mothers receiving medical check-ups within six weeks of their last delivery are presented in Table 8.16. Of the total, 31.25 percent of the pregnant women received check-ups within six weeks in the private clinic/hospital/doctor followed by upazila health complex at 16.11 percent and union health and family planning centre at 15.91 percent.

Table 8.16: Mothers Receiving Medical Check-Ups within Six Weeks of Last Delivery by Place of Check-Up, 2010

Place of check-up	% of mothers receiving check-up		
	National	Urban	Rural
1	2	3	4
Own residence	9.68	10.43	9.17
Satellite clinic	6.25	5.41	6.81
Union health & family welfare centre	15.91	4.43	23.71
Thana health centre	16.11	7.02	22.29
District hospital	8.02	9.68	6.89
NGO health centre	2.37	3.13	1.84
Medical college hospital	5.47	10.08	2.34
Private clinic/hospital/doctor	31.25	47.48	20.21
Others	4.96	2.35	6.74
Total	100.00	100.00	100.00

There exist rural-urban variations in medical check-ups within six weeks of last delivery by pregnant women. In the rural area, 47.48 percent of the pregnant women received medical check-up from private clinic/hospital/doctor, 10.43 percent in own residence and 10.08 percent from medical college hospital. In the urban area, 23.71 percent of the pregnant women received check-up within six weeks from union/ward health and family planning, 22.29 percent from upazila health centre and 20.21 percent from private clinic. Of the total, 5.41 percent of the rural women received service from satellite clinic compared with 6.81 percent in the urban area.

8.17 Attendance Service at Time of Last Delivery

Attendance service received by mothers during their last delivery is given in Table 8.17. Out of the total delivery at the national level, 42.82 percent were attended by household member/relation followed by trained aya/dai at 13.21 percent and neighbours by 15.77 percent. In the rural area, 37.26 percent of the births were attended by household member/relatives followed by 17.22 percent by doctor and 13.28 percent by trained aya/dai. In the urban area, 44.80 percent of the delivery was attended by household members/relatives followed by 17.01 percent by neighbours and 13.18 percent by trained aya/dai.

Table 8.17: Type of Attendant Service Received at the Time of Last Delivery, 2010

Type of Service Received	National %	Rural %	Urban %
1	2	3	4
Household member/relatives	42.82	37.26	44.80
Neighbour	15.77	12.30	17.01
Aya/dai (trained)	13.21	13.28	13.18
Aya/dai (untrained)	16.41	12.30	17.88
Nurse	3.30	7.55	1.79
Doctor	8.40	17.22	5.26
Other	0.08	0.09	0.08
Total	100.00	100.00	100.00

8.18 Patients' Reaction Regarding Time Given by Physician

The reactions of patients regarding time given by physicians are presented in Table 8.18. At the national level, 93.69 percent of the patients reported that the attending physician has given enough time to them. Such an opinion was given by 91.38 percent in the rural area and 94.24 percent in the urban area. The time given to the patients by attending physician was not enough was reported by 1.79 percent of the patients at the national level, 1.82 percent in rural area and 1.78 percent in urban area.

Table 8.18 Patients' Reaction Regarding Time Given by Physician, 2010

Reaction	National %	Rural %	Urban %
1	2	3	4
The physician has given enough time	93.69	91.38	94.24
The physician did not give enough time	1.79	1.82	1.78
I don't know	4.52	6.80	3.98
Total	100.00	100.00	100.00

8.19 Motivation for Immunization

The responses of households regarding motivation for giving immunization doses to children are presented in Table 8.19. Among the responding households, 48.80 percent reported that they had immunized their children from their own consciousness followed by 25.05 percent motivated by government health workers and 16.06 percent by the EPI programme.

Table 8.19: Distribution of Households by Means of Their Motivation for Immunization, 2010

Total	100.00	100.00	100.00

There exists no significant gender variation in motivation of household for receiving immunization for children. In terms of urban-rural variation, 41.92 percent of the rural households reported to immunize their children on their own as against 70.79 percent of the urban households. Both in rural and urban areas, government health workers were the second highest source at 28.89 percent and 12.79 percent respectively.

8.20 Place of Receiving Vaccine

The last place of receiving vaccine by children is presented in Table 8.20. Out of the total children receiving immunization doses, 32.48 percent received doses from union health and family planning centres followed by satellite clinics at 30.69 percent and own residence by government workers at 21.72 percent.

Total	100.00	100.00	100.00

There exist some variations between urban and rural areas with respect to the last place of receiving immunization doses. In the rural area, 36.98 percent of the children received

immunization doses from union health and family planning clinics followed by satellite clinics at 27.84 percent and own residence (government worker) at 24.18 percent. On the other hand, in the urban area, 39.82 percent received immunization doses from the satellite clinics followed by union/word health and family planning centres at 18.05 percent and own residence at 13.86 percent by government health workers.

8.21 Coverage of Vaccination/Immunization Doses

The coverage of immunization is presented in Table 8.21. The percentage of children aged 0-5 years who received all immunization doses is presented in the table. At the national level, 85.95 percent have completed receiving immunization doses which are 86.58 percent for boys and 85.27 percent for girls. There exist rural-urban variations in immunization doses. In the rural area, 85.51 percent received immunization doses as against 87.36 percent for the urban area.

Table 8.21: Children Aged 0-5 Who Received Complete Immunization Doses, 2010

Residence	Both sex	Boys	Girls
1	2	3	4
National	85.95	86.58	85.27
Rural	85.51	86.80	84.11
urban	87.36	85.86	88.89

The immunization coverage for rural boys is 86.80 percent as against 85.86 percent for urban boys. On the other hand, 84.11 percent of rural girls received immunization doses as against 88.89 percent of the urban girls.

8.22 Medical Expenses

Medical expenses of patients over the preceding 30 days are presented in Table 8.22. At the national level, average medical expense per patient in the preceding 30 days was Tk 397. This was Tk 400 in the rural area and Tk 386 in the urban area. In the rural area, the expenditure per male patient was Tk 421 as against Tk 381 for female. On the other hand, in the urban area expenditure per male patient was Tk 349 compared with Tk 415 for female. In all areas, the expenditure for hospital/clinic was the highest. At the national level, an average of Tk 1,728 was incurred as hospital/clinic fee.

Chapter-IX

Social Safety Nets

Social Safety Nets Programmes (SSNP) are generally targeted to the poor. According to the HIES 2010 CBN estimates, 31.5 percent of the population are poor using the upper poverty line and 17.6 percent of the people are extreme poor who live below the lower poverty line. Most of the extreme poor suffer from chronic poverty and multiple deprivations. Most of them are jobless, landless or assetless. Many of these households do not have any adult working earning member or own any productive asset to support their families. Most of them live on charity or below the subsistence level. The government operates SSNPs to provide support to such families in cash or kind to help overcome extreme hunger and create productive assets for earning livelihoods.

The SSNP module was first introduced in HIES 2005 in which 11 programmes were included. In HIES 2010, its scope has been widened to include 30 programmes.

9.1 Households Receiving Benefits from SSNPs

The distribution of households receiving benefits from SSNPs is shown in Table 9.1.

Table 9.1: Distribution (Percent) of Households Receiving Benefits from SSNPs, 2010

Year	National	Rural	Urban
2010	24.57	30.12	9.42
2005	13.06	15.64	5.45

In 2010, 24.57 percent of the households at the national level received benefits during the last 12 months from at least one type of programme. In contrast, 13.06 percent of the households received benefit from SSNPs in 2005. In the rural area, 30.12 percent of the households received benefits from SSNPs as against 15.64 percent of the households in 2005. Similar increase in urban area may also be noted. Survey findings indicate that the SSNPs have been widened substantially both in coverage and amount distributed during the period 2005 to 2010.

Chart-11 Percentage of Households Receiving SSNP Benefits, 2010 and 2005

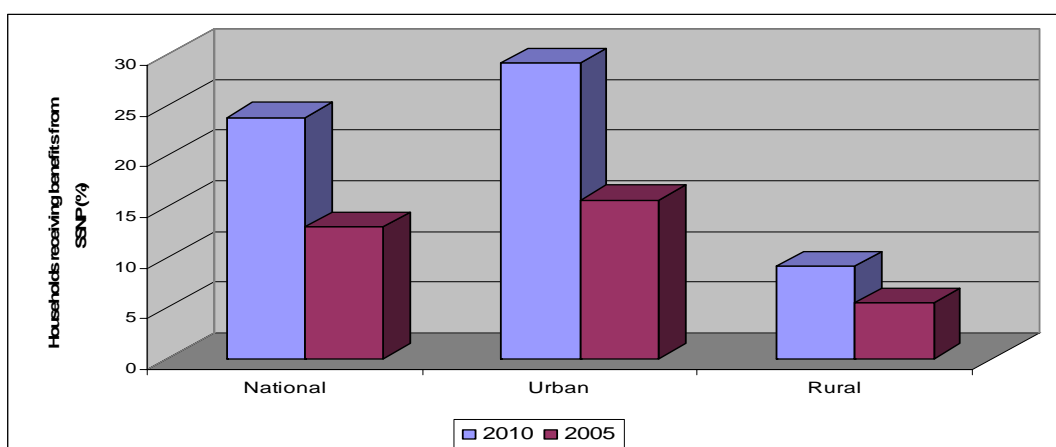

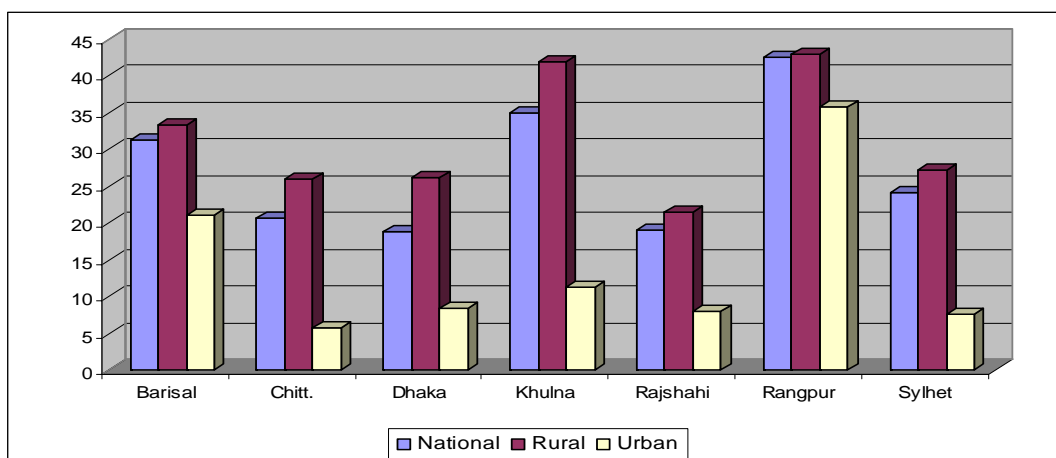

Table 9.2: Distribution of Households Receiving SSNP Benefits by Division, 2010

Division	% of Household Receiving Benefit (Survey Year 2010)		
	National	Rural	Urban
National	24.57	30.12	9.42
Barisal	34.43	37.20	20.66
Chittagong	19.99	24.50	7.44
Dhaka	18.87	27.80	5.99
Khulna	37.30	43.27	16.66
Rajshahi	20.66	22.85	10.17
Rangpur	33.65	35.11	23.68
Sylhet	23.51	26.06	10.50

The Division wise distribution of households receiving benefits from SSNPs shows that the highest percentage of households receiving benefits from SSNPs are located in Khulna Division (37.30 percent), followed by Barisal Division (34.43 percent) and Rangpur Division (33.65 percent). The proportion of households receiving benefit in Dhaka Division is the lowest at 18.87 percent preceded by Chittagong Division 19.99 percent. The share in the rural area is much higher than that in the urban area in all Divisions as most of the SSNP programmes are operated intensively in the rural area.

Chart-12 Percentage of Households Receiving SSNP Benefits by Division

9.2 Average Benefits Received from SSNPs

The average benefit received from SSNPs measured in monetary terms in 2010 is estimated at Tk. 483 per household at the national level (Table 9.3). The highest average amount per household is received from Housing Support at Tk.10,650 followed by Cash for Work at Tk. 2,077 and Allowance for Beneficiaries in Chittagong Hill Tracts Area at Tk. 1,644.

9.3 Distribution of Households Receiving Benefits by Types of Programme

Among the households covered by SSNPs, 19.14 percent benefit from Stipend for Primary Students followed by Agriculture Rehabilitation (16.32 percent) and Old Age Allowance (15.85 percent). It may be seen that Dhaka and Khulna Divisions received the largest shares of benefit from Agriculture Rehabilitation Programme estimated at 30.32 percent and 24.87 percent respectively while Chittagong and Rangpur Divisions received the lowest at 0.43 percent and 1.78 percent respectively.

9.4 Percentage of Population by Quarterly Inclusion in SSNPs

Table 9.5 provides the percentage of population by quarterly inclusion in SSNPs as estimated from HIES 2010. Considering the relative contribution of 30 SSNP programmes, Agriculture Rehabilitation Programme, Stipend for Primary Students, General Relief Activities, Old Age Pension and Stipend for Secondary and Higher Secondary Students included new members significantly. The Agriculture Rehabilitation Programme included 46.33 percent of the new members followed by Stipend for Primary Students at 15.92 percent, General Relief Activity at 5.48 percent and Stipend for Secondary and Higher Secondary Students at 4.47 percent.

The findings of the quarterly contribution in including new members show that in the first quarter (January-March), Agriculture Rehabilitation Programme, Stipend for Primary Students, General Relief Activities, Stipend for Secondary and Higher Secondary Female Students and Old Age Pension included 32.99 percent, 26.39 percent, 6.47 percent, 7.72 percent and 7.23 percent respectively. In the second quarter (April-June) Agriculture Rehabilitation Programme, Stipend for Primary Students, Gratuitous Relief (Cash), and Old Age Pension included 79.14 percent, 4.15 percent, 3.44 percent, and 1.85 percent respectively. In the third quarter, Gratuitous Relief, Vulnerable Group Development (VGF), Vulnerable Group Feeding, General Relief Activities and Agriculture Rehabilitation Programme included 39.53 percent, 16.23 percent, 15.41 percent, 12.19 percent, and 7.23 percent respectively. In the fourth quarter, Gratuitous Relief, General Relief Activities, Stipend for Primary Students, General Relief Activities and Vulnerable Group Feeding included 44.05 percent, 15.50 percent, 10.58 percent and 9.98 percent respectively.

The findings suggest that the stipend programmes for the students contributed more in the first and second quarters but relief activities contributed significantly in the third and fourth quarters of the year.

Table 9.5: Percentage of Household by Quarter of Inclusion in SSNPs, 2010

Type of SSNP	Total	Year 2010			
		Jan-Mar	April-June	Jul-Sep	Oct-Dec

Chapter-X

Disability, Migration & Remittance, Micro Credit, Crisis & Crisis Management

The HIES 2010 questionnaire included four modules for the first time. These relate to:

1. Disability
2. Internal and external migration of household members
3. Indebtedness, opening of bank accounts and savings
4. Household crisis & Crisis management

10.1 Disability

The disability module contained six types of disabilities. To collect information on these disabilities, every member of the households was considered irrespective of age. In some cases, however, children below 2-3 years were not included for obvious reasons (mainly because of absence of necessary cognizable symptoms). The six categories of disabilities were:

1. Eye sight difficulty
2. Hearing difficulty
3. Walking and climbing difficulty
4. Remembering and concentrating difficulty
5. Self-care difficulty
6. Speaking and communicating difficulty

It is observed that the net percentage of population suffering from any type of disability is 9.07 percent. The proportion for males is 8.13 percent whereas that for females is 10.00 percent. The proportion in rural area for both sexes is 9.63 percent whereas in urban area, the proportion is 7.49 percent.

Individually, 14.01 percent suffer from some kind of disability, but because one person may have two or more kinds of disability at the same time, the net percentage stands at 9.07 percent. The findings given below are based on the type of disability but do not represent the net percentage of population.

Each and every type of disability (difficulty) is scaled (classified) into three categories by its degree of intensity, such as “some difficulty”, “severe difficulty” and “fully unable”. This type of classification has been developed by the Washington Group (WG) of the World Bank and this was first applied in Brazil for collecting disability data in 2008. In HIES 2010, it was adapted to collect disability data in Bangladesh.

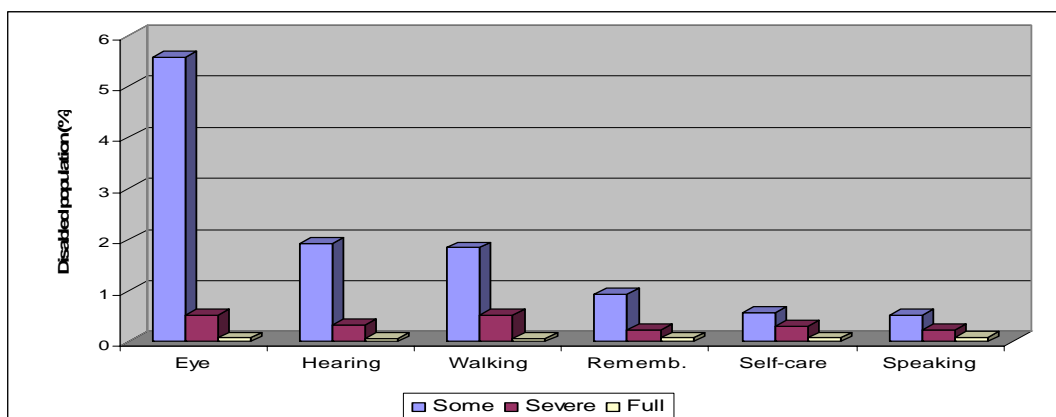

Eyesight and hearing difficulties are applicable to all persons including children of all ages, while the other four difficulties are applicable in case of all persons in whose cases the symptoms are apparent. The findings are given in Table 10.1.

Table 10.1: Percentage Distribution of Population (all ages) having any Difficulty (Disability) by Type and Intensity

Type of Difficulty	Intensity of Difficulty		
	Some	Severe	Fully Unable
Total	11.38	2.17	0.46
Eyesight	5.58	0.53	0.08
Hearing	1.93	0.33	0.06
Walking and climbing	1.84	0.53	0.07
Remembering and concentrating	0.94	0.24	0.08
Self-care	0.57	0.30	0.08
Speaking and communicating	0.52	0.24	0.09

The table shows that the highest number of persons reporting disability belongs to some eyesight difficulty which is 5.58 percent followed by hearing difficulty at 1.93 percent. In case of severe difficulty, the highest incidence is for both eyesight and walking and climbing at 0.53 percent followed by hearing at 0.33 percent. The percentage of population who are fully unable in any type of disability is 0.46 percent. Among these, speaking and communicating difficulty is the highest at 0.09 percent. However, variations among all these categories are relatively small.

Chart-13 Percentage of Disabled Population by Type and Intensity of Difficulty

The urban and rural variation by types, residence and intensity of disabilities is shown in Table 10.2.

Table 10.2: Percentage Distribution of Population (all ages) having Difficulty by Type, Residence and Intensity

Type of difficulty	Rural			Urban		
	Some	Severe	Fully Unable	Some	Severe	Fully Unable
Total	12.26	2.42	0.64	8.91	1.46	0.24
Eyesight	5.73	0.58	0.09	5.15	0.37	0.04
Hearing	2.20	0.37	0.08	1.18	0.20	0.02
Walking and climbing	2.07	0.60	0.09	1.19	0.33	0.03
Remembering and concentrating	1.06	0.28	0.09	0.58	0.15	0.04
Self-care	0.63	0.34	0.09	0.42	0.21	0.06
Speaking and communicating	0.57	0.25	0.11	0.39	0.20	0.05

The disabilities in the categories of ‘some’, ‘severe’ and ‘fully unable’ in the rural area were reported to be 12.26 percent, 2.42 percent and 0.64 percent respectively as against 8.91 percent, 1.46 percent and 0.24 percent in the urban area. The percentage of population having any type of disability with some difficulty in rural areas was higher than that in urban areas.

The incidence of “some difficulty” in eye sight was reported at 5.15 percent in urban area as against 5.73 percent in rural area. In case of “fully unable” in eye sight, the share of rural area was 0.09 percent which was 0.04 percent in urban area.

The incidences of hearing, walking and climbing difficulties were next to eye sight difficulty. The lowest incidence of disability belonged to speaking and communicating difficulty. Table 10.3 provides the distribution of disabilities by sex and types.

Table10.3: Percentage Distribution of Population (all ages) having Difficulty by Type, Sex and Intensity

Type of difficulty	Male			Female		
	Some	Severe	Fully Unable	Some	Severe	Fully Unable
Total	9.63	2.18	0.46	13.10	2.14	0.46
Eyesight	4.54	0.50	0.06	6.59	0.55	0.09
Hearing	1.70	0.34	0.06	2.16	0.31	0.07
Walking and climbing	1.65	0.57	0.07	2.03	0.48	0.07
Remembering and concentrating	0.82	0.25	0.09	1.05	0.24	0.07
Self-care difficulty	0.45	0.30	0.08	0.69	0.31	0.08
Speaking and communicating	0.47	0.23	0.10	0.58	0.25	0.08

At the aggregate level, males were some what better off in comparison with females as far as ‘some difficulty’ is concerned. In this category, all the six types of disability show that the proportion of females was higher than that of males. But in case of ‘severe difficulty’, the position of males was marginally better off than that of females. In the category of ‘fully unable’, the position of males and females appear to be similar in total although slight variations were observed in different types. Table 10.4 provides the percentage distribution of population 5 years and over facing some difficulty by type of disability classified by age group.

Table 10.4: Percentage Distribution of Population (5 years and over) Facing Some Difficulty by Sex, Age Group and Type of Disability

Age group	Eye sight	Hearing	Walking	Mental	Self-care	Speaking
Both Sex						
Total	100.00	100.00	100.00	100.00	100.00	100.00

35-44	13.12	10.74	16.34	8.37	22.02	12.93
45-54	23.40	9.52	22.38	11.32	16.40	6.69
55-64	22.81	11.07	13.92	16.98	17.01	8.62
65 +	30.21	22.34	30.41	21.66	4.20	11.27
Female						
Total	100.00	100.00	100.00	100.00	100.00	100.00
5-9	0.61	6.81	1.67	2.86	0.00	0.00
10-14	1.61	8.81	1.87	3.43	9.10	9.97
15-24	2.97	8.21	4.71	13.46	2.80	26.17
25-34	7.55	15.38	13.30	19.81	18.89	10.63
35-44	20.15	13.60	14.46	10.67	15.34	18.92
45-54	24.10	10.89	16.79	16.54	10.30	4.52
55-64	19.60	10.66	19.72	5.20	21.23	12.33
65 +	23.41	25.64	27.49	28.03	22.34	17.45

The percentage of population facing ‘some difficulty’ increases with the increase of age. This is apparent in case of eye sight, hearing, walking and mental difficulty. However, in cases of self care and speaking, the trend apparently is not correlated with the aging process.

Some variations are observed in sex-wise distribution of disability. In case of eye sight and walking, females 65 years and over are somewhat better off than their male counterparts. But in other categories, the position of males appears to be better than females. Table 10.5 provides the percentage distribution of population 5 years and over facing 'severe difficulty' or 'fully unable' in different types of disabilities classified by age group and sex.

Table 10.5: Percentage Distribution of Population (5 years and over) Facing Severe Difficulty or Fully Unable by Type, Sex and Age Group

Age group	Eye sight	Hearing	Walking	Mental	Self care	Speaking
Both Sex						
Total	100.00	100.00	100.00	100.00	100.00	100.00
5-9	2.56	5.20	7.15	2.29	0.00	6.06
10-14	2.53	7.20	3.92	11.82	3.78	9.26
15-24	3.40	9.49	7.96	10.85	14.40	26.82
25-34	6.84	10.14	5.63	17.74	10.54	21.19
35-44	9.23	8.08	8.92	17.15	9.84	17.11
45-54	9.51	11.50	16.68	13.67	0.00	8.83
55-64	12.64	13.88	14.30	9.80	27.80	0.00
65 +	53.28	34.51	35.45	16.69	33.65	10.73
Male						
Total	100.00	100.00	100.00	100.00	100.00	100.00
5-9	1.80	8.76	7.23	3.98	0.00	1.89
10-14	3.25	11.01	4.37	13.52	6.06	15.18
15-24	4.52	11.06	6.52	7.99	12.23	22.63
25-34	8.70	6.41	6.01	19.88	11.70	22.30
35-44	10.20	8.10	11.51	22.54	13.90	17.39
45-54	7.48	9.46	18.79	17.35	0.00	14.47
55-64	11.83	9.41	16.22	1.24	32.31	0.00
65 +	52.20	35.80	29.26	13.50	23.81	6.15
Female						
Total	100.00	100.00	100.00	100.00	100.00	100.00
5-9	3.25	0.51	7.05	0.00	0.00	12.59
10-14	1.89	2.17	3.36	9.50	0.00	0.00
15-24	2.41	7.42	9.74	14.73	18.00	33.39
25-34	5.19	15.07	5.15	14.83	8.62	19.45
35-44	8.37	8.06	5.60	9.85	3.09	16.68
45-54	11.31	14.19	14.09	8.67	0.00	0.00
55-64	13.35	19.76	11.93	21.41	20.31	0.00
65 +	54.23	32.82	43.08	21.01	49.99	17.89

It is apparent that the aging process has some impact on eyesight, hearing, walking and self-care, but in case of mental and speaking difficulties it does not appear to be significant.

For persons 65 years or over, males appear to be in a better position especially in case of eye sight, walking, mental, self-care and speaking. The position of females in case of hearing is slightly better than that of males.

10.2 Migration & Remittance

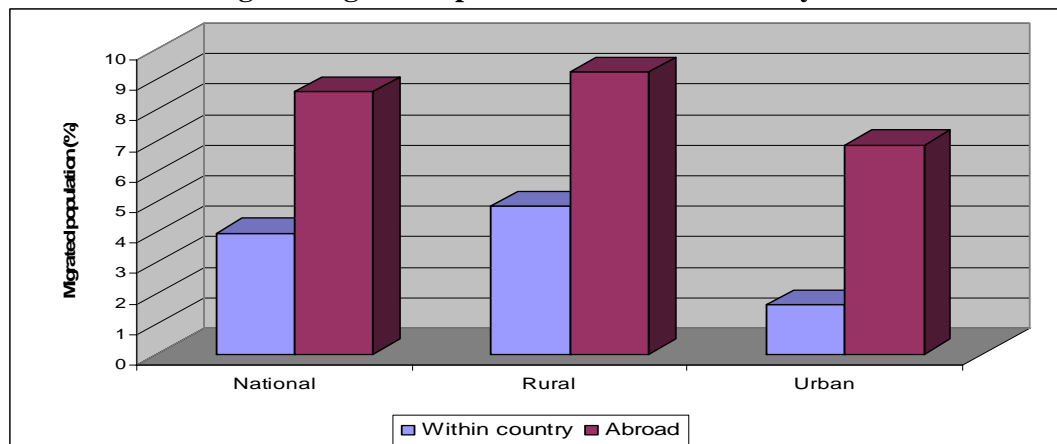

Information regarding migration of any member of the households was collected through HIES 2010. It related to any member who migrated within the country or abroad during the last five years. Data variables are: age, sex, education, occupation, name of district, country of migration, duration of stay, amount of remittances during last 12 months and related information.

Table 10.6: Percentage Distribution of Households Reporting Migration of Any Member by Residence

Residence	Total	Within Country	Abroad
National	12.28	3.97	8.60
Rural	13.72	4.84	9.25
Urban	8.33	1.62	6.85

Note: Within country and abroad added together does not equal to total because one household might have reported both categories.

The table shows that 12.28 percent of the households reported any kind of migration either within the country (e.g. from one district to another) or abroad. Of these, 8.60 percent of the households reported migration abroad. The proportion of rural households belonging at least one migrant was higher (13.72 percent) than that of urban households (8.33 percent). It is also observed that the proportion of migration from rural area was higher than that of urban area in case of both types of migration. Table 10.7 shows the proportion of number of migrants by sex and residence.

Chart-14 Percentage of Migrant Population within the Country and Abroad**Table 10.7: Percentage Distribution of Migrant Persons by Sex and Residence**

Residence	Both Sexes	Male	Female
National	100.00	97.17	2.83
Rural	82.49	97.08	2.92
Urban	17.51	97.60	2.40

At the national level, 97.17 percent of the people who migrated were males and the rest 2.83 percent were females. The sex-wise variation between the rural and urban areas is very similar. However, urban-rural variation in total number of migrant persons is high showing 82.49 percent from rural area and 17.51 percent from urban area. Table 10.8 gives the proportion of migrant persons by sex and place of migration.

Table 10.8: Percentage Distribution of Migrant Persons by Sex and Place of Migration

Sex	Total	Within Country	Abroad
Both sexes	100.00	33.30	66.70
Male	100.00	32.51	67.48
Female	100.00	60.17	39.83

The table shows that, among the migrant persons, 33.30 percent migrated from one district to another within the country and 66.70 percent migrated abroad. The proportion of male migrant persons was 32.51 percent and most of the migrants (97.17 percent) were males. But in case of females, the proportion of migration within the country was higher (60.17 percent) than that of migration abroad (39.82 percent).

Table 10.9 provides the percentage distribution of persons who migrated abroad during the last five years classified by broad age group.

Table 10.9: Percentage Distribution of Migrants Abroad by Broad Age Group, Sex and Residence

Age group of migrant workers	National			Rural			Urban		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

500+	1.77	0.00	2.95	0.15	2.97	3.56	0.00	1.71
Average per household (in '000')	151.89	94.93	167.90	146.43	120.12	146.49	136.83	163.60
% of total remittance (Number)	100.00	4.07	39.82	35.47	5.64	7.16	0.76	7.08
% of total remittance (Amount)	100.00	2.71	42.37	34.97	4.74	7.56	0.69	6.95

The highest percentage (28.57 percent) of the amount of remittances belonged to the category of Tk. 100-149 thousand. The second highest category is occupied by the group Tk. 50-99 thousand with a share of 25.57 percent. These two groups occupied more than 50 percent of the remittances in all Divisions except Rangpur where 57.14 percent belonged to less than Tk. 25 thousand and Tk. 25-49 thousand groups.

The average amount of remittances per recipient household was Tk.167.90 thousand in Chittagong Division followed by Sylhet Division (Tk. 163.60 thousand). The lowest amount was received by Barisal Division with Tk. 94.93 thousand per household. The total number of

remittances and total amount of remittances were the highest in Chittagong Division followed by Dhaka Division. The lowest was in Rangpur Division. Table 10.11 gives the percentage distribution of migrants working abroad who sent their remittances during the last 12 months classified by medium of remittances.

Table 10.11: Percentage Distribution of Migrants Working Abroad and Sending Remittances during Last 12 Months Classified by Medium of Remittances

25-49	8.74	7.02	0.00	32.65	7.76	23.65	0.00	14.32	12.18
50-99	25.57	36.47	43.08	51.91	24.80	25.97	40.00	20.77	18.48
100-149	28.57	26.18	13.83	0.00	29.43	17.63	39.06	30.63	19.94
150-199	10.74	2.79	14.63	0.00	11.99	4.84	0.00	5.85	16.30
200-299	10.30	7.58	14.63	0.00	10.97	4.23	13.37	8.67	6.66
300-399	3.01	1.40	0.00	0.00	3.40	0.00	0.00	3.14	0.00
400-499	1.36	5.08	13.83	0.00	1.20	0.00	0.00	0.00	0.00
500+	1.77	6.98	0.00	0.00	1.68	0.00	0.00	0.00	0.00
Av. per HH (in '000')	151.89	205.26	158.25	53.22	158.31	74.59	99.79	101.78	88.90
% of total remittance (number)	100.00	6.03	0.61	0.55	80.34	3.23	0.95	6.28	2.02
% of total remittance (Amount)	100.00	8.21	0.75	0.22	82.81	1.63	0.73	4.41	1.25

Most of the remittances (80.34 percent) were sent through banks. Brokers and Western Union came next with 6.28 percent and 6.03 percent respectively. The Post Office was the least preferred medium of sending remittances with only 0.55 percent of the total remittances.

In respect of average amount per household, Western Union had the highest amount of Tk. 205.26 thousand while the Post Office had the lowest amount of Tk. 53.22 thousand.

The banks handled the highest percentage of remitted amount covering 82.81 percent. This was followed by the Western Union with 8.21 percent. The combined share of remittances from all other sources was only 8.99 percent.

10.3 Micro Credit

One of the newly introduced modules of HIES 2010 questionnaire is related to loans and saving habits. The main features included are: opening new bank account, transactions in money matters, amount of loan, duration of repayment, interest rate, repayment status and purposes of taking loans and related financial issues. Table 10. provides some baseline information regarding opening of a new account, depositing money in any micro finance or financial institutions, depositing money in any informal financial institutions for saving and receipt of loans from any quarter.

Table 10.12: Percentage Distribution of Households Opening Bank Account, Depositing Money and Receiving Loans during the last 12 Months by Residence

Subject	National	Rural	Urban
Opening new bank account	7.41	5.05	13.85
Deposited money in any micro finance or financial institutions	14.51	15.94	10.61
Deposited money for saving in any informal financial institutions	5.64	5.80	5.22
Received loans from financial institutions, friends, etc.	32.03	35.08	23.70

The table shows that 32.03 percent of the households received loans from financial or non-financial institutions, friends, moneylenders, or other sources during the last 12 months preceding the day of enumeration. The proportion was higher in rural area (35.08 percent) than that of the urban area (23.70 percent). A total of 14.51 percent of the households reported depositing money in any micro-finance or financial institution. The proportions in urban area and rural area were 10.61 percent and 15.94 percent respectively. Depositing money for saving in any informal financial institution such as local co-operatives, clubs, and similar institutions was reported by 5.64 percent of the households; the proportions being 5.22 percent in urban area and 5.80 percent in rural area. Opening of a new bank account during the last 12 months was reported by 7.41 percent of the households, which was 5.05 percent in rural area and 13.85 percent in urban area. The Division wise percentage distribution of households taking loans from any kind of institutions including friends and relatives is given in Table 10.13.

Table 10.13: Percentage Distribution of Households with Members Receiving Loans from Friends, Financial or Non-financial Institutions during last 12 Months

Division	Locality		
	Total	Rural	Urban
Total	100.00	100.00	100.00
Barisal	41.95	42.21	40.67
Chittagong	26.45	30.00	16.57
Dhaka	26.12	32.62	16.74
Khulna	41.72	41.55	42.33
Rajshahi	38.58	38.60	38.47
Rangpur	39.44	38.46	51.67
Sylhet	19.97	20.45	17.50

The table shows that 41.95 percent of the households in Barisal Division and 41.72 percent in Khulna Division took loans from friends, financial or non-financial institutions. The proportions were relatively similar in urban and rural areas. Sylhet Division reported the lowest proportion with 19.97 percent with 20.45 percent in rural area and 17.50 percent in urban area.

Table 10.14 provides the percentage distribution of loan takers classified by sources and the main reason for taking loan.

Table 10.14: Percentage Distribution of Loan Recipients by Source and Reason for Taking Loan

Source	Total	Edu- cation	Health	Agri- culture	Business	Housing	Food Expenditure	Marriage	Others

Relatives	3.80	0.84	11.13	10.46	13.84	11.39	8.39	4.23	39.67
Grocery Shop	0.08	0.00	0.00	8.31	26.59	0.00	53.19	0.00	11.89
Others	3.13	1.34	2.73	21.00	22.31	11.51	10.89	3.75	26.43

Note : In the table, sum of every column other than the 'Total' line is approximately 100.00. The sum of column 3 to 10 is also 100.00 (approximately) in every line (row).

It appears that 21.11 percent of the borrowers took loan from the Grameen Bank. This was followed by ASA at 18.37 percent and other NGOs at 14.29 percent. The lowest reported sources were grocery shop and Leasing Organizations with only 0.08 percent of the borrowers each. Financing business was the prime reason for borrowing for 23.73 percent followed by agriculture at 21.09 percent and other reasons at 21.55 percent. Table 10.15 provides the average amount of loan taken per borrowing household over the last 12 months by Division and place of residence.

Table 10.15: Average Amount (Taka) of Loan Taken by Division and Residence

Residence	Total	Barisal	Chittagong	Dhaka	Khulna	Rajshahi	Rangpur	Sylhet
1	2	3	4	5	6	7	8	9
National	28062	24569	36902	36085	22071	24894	15242	22558
Rural	21804	22836	33435	24196	17486	18409	11999	24175
Urban	54122	34090	55701	70067	37741	57690	38795	13711

According to the table, the average amount of loan taken per reporting household was Tk. 28,062 at the national level; Tk. 21,804 in rural area and Tk. 54,122 in urban area. The average amount of loan taken in Chittagong Division was the highest at Tk. 36,902 followed by Dhaka Division at Tk. 36,085. Rangpur Division had the lowest average at Tk.15,242. In the rural area, Chittagong Division had an average of Tk. 33,435 and Rangpur Division had Tk. 11,999. In the urban area, the average loan taken was Tk. 70,067 in Dhaka Division followed by Chittagong Division at Tk. 55,701. Sylhet Division reported an average of Tk. 13,711. On average, loan in urban area was nearly two and a half times higher than that in the rural area.

10.4 Household Crisis & Crisis Management

Crisis & Crisis Management is one of the four new modules included in the HIES 2010 questionnaire. The questionnaire was designed to collect information about whether the households faced any crisis during the last 12 months, month of occurrence of crisis, duration of crisis, whether the crisis affected income, resources, food production and food purchase and also measures taken to combat the crises.

The questionnaire contained eighteen types of crises and sixteen types of steps to cope with the crises. Table 10.16 gives a brief description of the information relating to crisis management collected from the survey.

Table 10.16: Percentage Distribution of Households Faced/Experienced Crises by Type of Crises during last 12 Months

Type of Crisis	National	Urban	Rural
1. Drought/irregular rains	3.62	0.79	4.66
2. Floods	2.67	0.16	3.59
3. Landslides/Erosion	0.31	0.09	0.39
4. Excessive crop diseases/pests	1.74	0.35	2.25
5. Excessive livestock diseases	0.48	0.13	0.60
6. Unusual high price of Agri. inputs	0.21	0.01	0.28
7. Unusual low price of Agri. products	0.16	0.03	0.21
8. Low income due to factory layoff	0.08	0.10	0.08
9. Less earning due to job loss of HH members	0.43	0.15	0.54
10. Serious accident/illness of income earners	0.93	0.78	0.98
11. Serious accident/illness of other members	1.01	1.09	0.98
12. Death of income earner	0.26	0.15	0.30
13. Death of other household members	0.38	0.26	0.43
14. Theft of money/valuable assets	0.58	0.65	0.56
15. Theft of Agri. Assorts/output (crop/livestock)	0.21	0.02	0.27
16. Conflict/violence	0.23	0.18	0.24
17. Fire/earth quake/tornado etc.	1.15	0.16	1.51
18. Others	0.63	0.35	0.73
Total	0.84	0.30	1.03

The table shows that a total of 0.84 percent of the households faced any kind of crisis during the last 12 months; 0.30 percent in urban area and 1.03 percent in rural area. Among the types of crisis, drought/irregular rain was reported by 3.62 percent with 0.79 percent in the urban area and 4.66 percent in the rural area, Floods affected a total of 2.67 percent of the households which was 3.59 percent in the rural area. Excessive crop diseases/pests affected a total of 1.74 percent of the households; the incidence of which was 2.25 percent in the rural area.

Table 10.17: Percentage Distribution of Households Classified by Steps Taken to Cope with Crises

Type of steps taken	National	Urban	Rural
1. Help from friends & relatives	16.54	21.49	16.01
2. Help from local govt. agency	0.85	0.00	0.95
3. Changing food habit	5.50	5.38	5.52
4. Changing strategy of crop production	6.58	1.90	7.08
5. Non-agriculture work/self employment with more pay	1.67	0.70	1.78
6. Increased Agri. work/labour	4.42	1.03	4.78
7. Migrated	2.42	0.00	2.67
8. Spending from previous savings	35.43	35.01	35.48
9. Taking loans	14.68	13.69	14.79
10. Selling durable goods	1.34	0.81	1.40
11. Selling land/House	1.15	3.44	0.91
12. Mortgaging land/house	2.00	2.28	1.97
13. Selling domestic animals	2.53	2.97	2.48
14. Sending children to another place	0.20	1.43	0.07
15. Reduced exp. in health & education	0.00	0.00	0.00
16. Others	4.67	9.88	4.11

Table 10.17 shows that 35.43 percent of the households who experienced crisis coped with the problems through spending from previous savings, 16.54 percent through getting help from friends and relatives and 14.68 percent by taking loans. A similar order of importance was followed both in urban and rural areas. However, differences in urban and rural areas were observed in cases of changing strategy of crop production, increased agricultural work/labour, migration and help from local government agencies. None of the households reported reduced expenditure in health and education.

Chapter-XI

Selected Community Characteristics

In order to supplement household level statistics, selected information on mouzas/villages (community) was collected through the HIES 2010. As mentioned in Chapter 1, 392 rural mouzas and 220 urban mohallas were included in HIES 2010. However, community information was collected from the rural mouzas only. The number of such mouzas was 352 since some urban areas which were treated as rural for the survey were not considered for collecting community level information. The questionnaire focused on general information, economic activities of the mouza, agriculture and agricultural production, facilities existing in the mouza, physical and social infrastructure, natural impact, prices and wages.

11.1 Mouzas Having Union Council Officials

The mouzas having union council officials are presented in Table 11.1. It shows that a total of 73 mouzas (20.74 percent) in the sample had union council Chairmen. Among them, 97.26 percent of the mouzas had male Chairmen and the rest had female Chairmen. As many as 296 mouzas (84.09 percent) had union council members of which 48.99 percent had male members and 21.28 percent had female members while 29.73 percent of the mouzas had both male and female members.

Table 11.1: Distribution of Mouzas Having Union Council Officials, 2010

Union Council Officials	No. of Mouzas	Percentage of mouzas having union council officials by sex			
		Total	Male	Female	Both sex
1	2	3	4	5	6
2010					
Chairman	73	100.00	97.26	2.74	0.00
Member	296	100.00	48.99	21.28	29.73
Secretary	21	100.00	90.48	9.52	0.00
2005					
Chairmam	64	100.00	95.31	4.68	0.00
Member	257	100.00	74.31	17.50	8.17
Secretary	31	100.00	100.00	0.00	0.00

11.2 Main Activities of Mouzas

The community questionnaire collected information on main activities of the sample mauzas. The respondents were asked to provide information on major activities in their respective mouzas from a list of 15 activities on multiple choice basis and the consolidated findings are presented in Table 11.2. The table shows that crop farming was the most common activity of the mouzas which was reported by 331 mouzas (94.03 percent). The second major activity was casual/daily labour; this was reported by 250 mouzas (71.02 percent). The third major activity was business/hotel restaurant which was reported by 213 mouzas (60.51 percent). The activity 'Job' in any government or non-government organization was reported by 176 mouzas (50.00 percent). Fishing was reported by 112 mouzas (31.82 percent). As compared with HIES 2005, the percentage share of almost all activities declined in 2010 except in case of poultry where the percentage share showed an increase of 3.29 percent.

Table 11.2: Distribution of Mouzas by Major Economic Activities, 2010
(Multiple Choice)

Major Activities	Number of Mouzas	Percent of total mouzas
2010		
Crop	331	94.03
Livestock	75	21.31
Poultry	78	22.16
Forestry	24	6.82
Fishing	112	31.82
Small & Cottage Industry	22	6.25
Med. Large Industry	6	1.70
House & Road Building	13	3.69
Transport	59	16.76
Mineral	3	0.85
Electricity	3	0.85
Business/Hotel/Restaurant	213	60.51
Casual/Daily Labour	250	71.02
Job	176	50.00
Social Work	23	6.53
2005		
Crop	294	97.35
Livestock	66	21.85
Poultry	57	18.87
Forestry	25	8.27
Fishing	111	36.75
Small & Cottage Industry	38	12.58
Med. Large Industry	6	1.98
House & Road Building	14	4.63
Transport	86	28.47
Mineral	3	0.99
Electricity	2	0.66
Business/Hotel/Restaurant	208	68.87
Casual/Daily Labour	227	75.16
Job	170	56.29
Social Work	20	6.62

11.3 Main Activities of Women

Information was collected on main activities of women in the mouza. Five major activities of women as reported in the survey are given in Table 11.3.

Table 11.3: Main Activities of Women by Mouzas

Major Activities	Number of Mouzas	Percent of total mouzas
Casual/Daily Labour	155	44.03
Crop	145	41.19
Poultry	94	26.70
Job	85	24.15
Livestock	65	18.47

It is seen that 155 mouzas (44.03 percent) reported that casual/daily labour was the main activity, 145 mouzas (41.19 percent) reported crop production as the main activity and 94 mouzas (26.70 percent) reported livestock rearing as the main activity of women.

11.4 Selected Government Programmes in the Mouzas

Information about selected government programmes in the sample mouzas reveals that 75.69 percent of the mouzas had government sponsored Old Age Pension Scheme. This was followed by Vulnerable Group Development (58.56 percent), Vulnerable Group Feeding (58.29 percent) and Food for Works (56.91 percent) programmes. Adult Education Programme was found in only 4.97 percent of the mouzas preceded by Food for Education in 10.50 percent of the mouzas.

**Table 11.4: Mouzas Covered Under Selected Government Programmes
(Multiple Choice)**

Government Programme	No. of Mouzas Having the Programme	% of Mouzas	Average No. of Household
2010			
Food for Work	206	58.52	103
Food for Education	38	10.80	146

Other Government Programmes	66	21.85	60

11.5 NGO Programmes Operated in the Mouzas

NGO programmes operated in the mouzas are presented in Table 11.5. NGO programmes were classified into seven broad categories: (i) small business/industries, (ii) technical training, (iii) education, (iv) health and family planning, (v) tree plantation, (vi) water supply/sewerage, and (vii) others. In this context, it should be noted that a particular NGO may have more than one type of programmes in a mauza and, on the other hand, more than one NGO may operate in a particular mauza.

Table 11.5 shows that small business/industry was operated in a large number of mouzas by different NGOs. The Grameen Bank operated this programme in 229 mouzas which covered about 62.06 percent of this activity. The Grameen Bank and BRAC operated education programme in 140 mouzas covering about 87.50 percent of education programme.

Table 11.5: Distribution of Mouzas Covered by Selected NGO Programmes Operated by Different NGOs, 2010

NGO programme	No. of mouzas covered by the programme operated by different NGO

11.6 Average Per Acre Production of Selected Crops

The average per acre production of selected crops is presented in Table 11.6. The table shows that boro rice was produced in 243 mouzas where average per acre production varies widely from 10-20 maunds to 71-80 maunds. However, the highest number of 97 mouzas reported production between 51 and 60 maunds. The production of aman rice is reported in 237 mouzas where average per acre production varied from 10-20 maunds to 41-50 maunds. The highest number of 91 mouzas reported average production of 21-30 maunds. The production of aus rice was reported by 112 mouzas, the average per acre production ranged from less than 10 maunds to 41-50 maunds. The highest number of 54 mouzas reported average per acre production of 21-30 maunds. The production of wheat was reported by 128 mouzas. Among these mouzas, the average production of wheat per acre varied from less than 10 maunds to 31-40 maunds. However, average production of 21-30 maunds was reported by highest 71 mouzas. Jute was produced in 142 mouzas; highest number of 69 mouzas reported average per acre production of 21-30 maunds. The average per acre production of other crops like sugarcane, potato, pulses, and oilseeds also varied substantially over different mouzas.

Table 11.6: Distribution of Mouzas over Per Acre Production of Selected Crops, 2010

11.7 Existence of Irrigation System in the Mouzas

The existence of different irrigation systems in the mouzas is presented in Table 11.7. The table shows that 81.48 percent of the mouzas had shallow tube-wells for irrigation followed by 40.74 percent of the mouzas reporting the use of deep tube-wells, 31.48 percent using low-lift pumps and 21.11 percent using indigenous systems of irrigation. The gravity system of irrigation was found in 14.44 percent of the mouzas.

Table 11.7: Existence of Different Irrigation Systems in the Mouzas

Irrigation System	Mouzas reporting	% of total mouzas
HIES 2010		
Shallow tube-well	220	81.48
Deep tube-well	110	40.74
Low lift pump	85	31.48
Gravity system	39	14.44
Indigenous system of irrigation	57	21.11
HIES 2005		
Shallow tube-well	183	74.91
Deep tube-well	114	34.65
Low lift pump	97	35.97
Gravity system	63	26.73
Indigenous system of irrigation	93	28.38

11.8 Existence of Selected Agricultural Activities in the Mouzas

The existence of selected agricultural activities such as nursery, dairy farm, fish farm, hatchery, poultry farm in the mouzas is shown in Table 11.8. It is seen that 37.22 percent of the mouzas reported the existence of poultry farms followed by 30.11 percent having fish farms and 16.76 percent having nurseries. The existence of dairy farm was reported by 7.95 percent of the mouzas and the existence of hatcheries was reported in 5.40 percent of the mouzas.

Table 11.8: Existence of Selected Agricultural Activities in the Mouzas, 2010

Type of activities 1	Mouzas reporting 2	% of total mouzas 3
HIES 2010		
Fish farm	106	30.11
Nursery	59	16.76
Poultry farm	131	37.22
Dairy farm	28	7.95
Hatchery	19	5.40
HIES 2005		
Fish farm	99	40.92
Nursery	74	24.42
Poultry farm	66	41.58
Dairy farm	13	8.25
Hatchery	12	5.28

11.9 Existence of Selected Physical and Social Infrastructure in the Mouzas

The existence of selected physical and social infrastructure in the mouzas is presented in Table 11.9. The physical infrastructures are related to communication, health and education. It is observed that bus stations were found in 22.73 percent of the mouzas, train stations in 3.69 percent of the mouzas and launch stations in 3.41 percent of the mouzas.

As regards physical infrastructure related to health, upazila health complexes were located in 1.70 percent of the sample mouzas, union health and family welfare centres in 7.39 percent of the mouzas, satellite clinics in 18.18 percent of the mouzas, private hospitals and clinics in 3.98 percent of the mouzas, NGO clinic/health centres in 7.39 percent of the mouzas, doctor's chambers in 17.61 percent of the mouzas, medicine shops/dispensaries in 38.64 percent of the mouzas, immunization centres in 25.57 percent of the mouzas, and veterinary doctors were available in 32.95 percent of the mouzas.

The existence of infrastructures related to education shows that there were primary schools in 30.68 percent of the mouzas, girl's schools in 10.51 percent of the mouzas, boy's high schools in 13.35 percent of the mouzas, co-education high schools in 24.72 percent of the mouzas, colleges in 6.53 percent of the mouzas, boy's madrashas in 9.09 percent of the mouzas and girl's madrashas in 6.25 percent of the mouzas. Adult education centres were observed in 7.10 percent of the mouzas and technical/vocational training centers in 7.39 percent of the mouzas.

Table 11.9: Selected Physical and Social Infrastructure in the Mouzas, 2010

Type of Infrastructure	Mouzs having the Infrastructure	% of total mouza
<u>Infrastructure related to communication</u>		
Bus station	80	22.73
Train station	13	3.69
Lunch station	12	3.41
<u>Infrastructure related to Health</u>		
Upazila/Thana health complex	1	0.28
Union health family welfare centre	6	1.70
Satellite clinic	26	7.39

11.10 Existence of Economic and Social Facilities in the Mouzas

The existence of selected economic and social facilities in the mouzas is presented in Table 11.10. It may be seen that 3.69 percent of the mouzas had branches of Bangladesh Krishi Bank, 5.11 percent had branches of commercial banks, 6.25 percent had branches of Grameen Bank, 15.63 percent had markets/bazars, 7.67 percent had food godowns/temporary purchase centres, 7.39 percent had cold storages, 4.83 percent had cinema halls, 17.33 percent had play grounds, 8.81 percent had community centres, 15.06 percent had cyclone shelters, 12.78 percent had post offices, 3.98 percent had police stations, 19.03 percent had fertilizer shops, and 17.05 percent of the mouzas reported having pesticide shops.

Table 11.10: Selected Economic and Social Facilities Existing in the Mouzas

Facilities	No. of mouzas having the facilities	% of total mouza
HIES 2010		
Branch of Bangladesh Krish Bank	13	3.69
Branch of commercial banks	18	5.11
Branch of Grameen Bank	22	6.25
Market/bazar	55	15.63
Food godown/temporary purchase center	27	7.67
Cold storage	26	7.39
Club (recreation)	57	16.19
Cinema hall	17	4.83
Play ground	61	17.33
Community centre	31	8.81
Cyclone shelter	53	15.06
Post office	45	12.78
Police station	14	3.98
Fertilize shop	67	19.03
Pesticide shop	60	17.05

11.11 Natural Facilities Available in the Mouzas

Natural facilities available in the mouzas are presented in Table 10.11. It is observed that 51.99 percent of the mouzas had rivers/canals, 34.38 percent had beels, 24.72 percent had open water sources other than beels, 6.53 percent had forests, 24.15 percent had khas land and char areas, 20.74 percent had other lands, and 14.49 percent of the mouzas had grazing fields.

Table 11.11: Natural Facilities Available in the Mouzas

Natural Facilities	Number of Mauzas	% of total mouza
HIES 2010		
River/canal	183	51.99
Beel	121	34.38
Other open water source	87	24.72
Forest	23	6.53
Khash land in char area	85	24.15
Other land	73	20.74
Grazing field	51	14.49

11.12 Mouzas Affected by Natural Disasters during Last Five Years

The number of mouzas affected by any type of natural disasters over the last five years is presented in Table 11.12. It is seen that 28.69 percent of the mouzas were stricken by flood at any time over the last five years, 15.06 percent were affected by drought, 8.24 percent were affected by river erosion, 10.80 percent were stricken by cyclone/tornado/hail storm, 7.67 percent were stricken by pestilence, 10.51 percent were stricken by poultry plague, 2.27 percent were affected by devastating epidemic, and 8.52 percent of the mouzas suffered from other natural disasters.

Table 11.12: Mouzas Damaged/Affected by Natural Disasters during the Last Five Years

Disaster	No. of mouzas affected	% of total mouza
HIES 2010		
Flood	101	28.69
Drought	53	15.06
River erosion	29	8.24
Cyclone/tornado/hail storm	38	10.80
Pestilence stricken	27	7.67
Poultry plague	37	10.51
Devastating epidemic	8	2.27
Other natural disaster	30	8.52

Questionnaire and Management

Questionnaire:

The questionnaire has been revised and updated for the Household Income and Expenditure Survey-2010. In the HIES-2010 the consumption module was included in the main questionnaire as it was done in HIES 2005 & HIES 2000. Therefore, only one questionnaire was used for all the sections covered under the preview of the HIES 2010. The HIES questionnaire contains nine separate sections. The following four new sub- modules were included in HIES-2010:

1. Disability
2. Internal and external migration
3. Indebtedness, opening of bank accounts and savings
4. Household crisis and crisis management

The section-wise description of the questionnaire has been given below.

Section-1: Household Roaster

This section contains general information of household members. The section is divided into two parts. Part-A contains information on household members, age, sex, relationship with head, religion, marital status etc, part-B covers information of employment status of the household members aged 5 years and over and part-C covers Social Safety Nets information.

Section-2: Education

This part of the questionnaire was framed to collect detailed information on education. It is divided into two parts. Part-A covers literacy and level of education and part-B covers information on current enrolment. In part-A of the questionnaire, the questions were on literacy and level of education of the household members aged 5 years and over. The questions were on literacy, type of school from where passed, highest class passed, type of institution from where passed or currently studying etc. Part-B of the questionnaire was designed for collecting information on current enrolment of students of 5 years and above which include class now attending, absence in the proceeding 30 days and causes of absence, stipend received by the female students, expenditure incurred by students for educational purpose in the preceding 12 months.

Section-3: Health

Section-4 of the HIES questionnaire was designed to collect detailed information on health. It has three parts. Part-A covers illness and injuries of all household members, part-B covers child health and immunization and part-C covers pre-natal and post-natal care of all ever married women. In part-A, questions were asked on chronic (disease/suffered in last 12 months) and recent illness (last 30 days) whether treatment was made, mode of transportation to treatment centres, time required to reach the treatment centres, waiting time to get treatment, reasons for selecting a particular treatment facility, reaction about time given by the service provider, expenditure on medical treatment for last 30 days and means of meeting medical expenditure.

Part-B: Covers the information on child health and immunization for children up to age 5. The information that were included were date of birth of the children, age in the last birth day, whether received any immunization doses, number of doses of vaccine received, place from where vaccine was received, who motivated for such measure.

Part-C: Covers information of childbirth of the ever married women. The questions included year of last delivery, visit to health centre during last pregnancy, place from where the service was received, in what month of pregnancy the 1st service was received, number of TT injection received, service received during birth, place of delivery, visit of health centre within six months of delivery, place of check-up after delivery etc.

Part-D: Covers information of disability of persons in respect of eye sight, hearing, speaking, walking and remembrance etc.

Section-4: Economic Activities, Self and Wage Employment

This section of the questionnaire was framed to collect information on economic activities and wage employment of the household members. This section is divided into two parts; part-A and part-B. The questions that were asked in part-A included type of activities performed in last 12 months for livelihood, how many days worked in last 12 months average hours worked per day, place of work, type of work engaged. Part-B includes the questions, if day labour; wage rate, wage received in cash or kind and if salaried employee; type of institutions, net wage and salaries, gross wages and salaries, income from gift, bonus, subsidy in the last year etc.

Section-5: Non-agricultural Enterprises

Part-A of this section of the questionnaire covered nonagricultural enterprise operated by the household in the preceding 12 months. The questions included in this section were how long the activity was being operated, place of activity/business, how many months the business was operated, share of the business, consumer/client of the business, whether registered or unregistered, sources of finance to establish the business, paid employee of the enterprise, type of problem encountered to run the business, gross sale in last 12 months, expenditure on wages and salary last year, expenditure on house rent last year, expenditure on raw materials in the previous year, expenditure on purchase of goods for sale in the last year, other expenditure incurred for running the business last year, expenditure on capital goods last year, worth of the business enterprise.

Section-6: Housing

This section was designed to collect information on housing. The information that were sought under this section, were number of rooms, wall materials, roof materials, types of toilet facilities, sources of drinking water and water for other uses, electric connections, ownership of telephone/mobile phone, housing structure, and ownership of housing unit.

Part-B of this section covers information on disasters and disasters management.

Section-7: Agricultural Enterprises

This section deals with agriculture enterprise. It is composed of five different parts; parts-A was devoted to land holding, part-B on crop production, part-C on non-crop activities, part-D on expenses in agricultural inputs and part-E on agricultural assts. Each part contain detailed questions on the respective agriculture related aspects. The question on part-A included quantity of owned agriculture land, agricultural land leased in, agricultural land leased out and quality of land, part-B included questions on cultivation of different kinds of crops in the preceding 12 months, land used for such cultivation, crop received from land in last 12 months, crops given to others, crops sold and crop used for household consumption. The non-crop activities of the households have been included in part-C of the questionnaire. These were ownership of livestock and poultry in the preceding 12 months, number sold and died, number consumed at the household level with price, fish produced in the preceding years, amount sold and amount consumed, income received from sale of timber, bamboo, fire wood, fruits and fruit tree etc. The agriculture inputs that were included in the part-D were seeds, fertilizer,

drought power, power tiller, insecticides, land rent, wage of agriculture labour, fuel and electricity and expenses incurred for fish culture, livestock and poultry rearing etc.

Part-E of the agriculture enterprises included agriculture assets (equipment), the change of stock in the preceding year and income received from renting of the equipment.

Section-8: Other Assets and Income

This section was devoted to collect information on other assets and income. It has two parts. Part-A covered information on other properties and assets, such as, land, stock share, bond, ornaments and change of stock of such assets. Part-B of this section covered information pertaining to income from land rent, insurance dividend, gifts, assistance and charity, remittances, interests and transfer payments, such as, VGD, VGF, GR and FFE. Part-C covers information on migration and remittances etc. Part-D covers information on loan and micro-credit etc.

Section-9: Consumption

This section covers information on household consumption. It has five parts. Part-A is designed for collecting information on daily food consumption; part-B on weakly food consumption, part-C on monthly non-food consumption, part-D on annual non-food expenditure and part-E on inventory of durable goods. In part-A of the questionnaire information daily food consumption were collected for 14 consecutive days by day to day visit. As many as 194 food items were included. Daily consumption in quantity and corresponding value with sources of receipts were collected. In part-B consumption of around 25 items and corresponding values were collected. In part-C monthly consumption expenditure on around 50 different items were collected. In part-D annual expenditure of more than 200 items were collected and in part-E and inventory of households durable goods were made:

Management:

Very strong and effective management system was adopted for HIES-2010 field works. The management of the HIES-2010 field works was done by the Core Survey Team (CST) led by the Project Director. The expatriate and local consultants of the project also helped in the activities of the CST. The CST was responsible for field operation, questionnaire design and printing and impart of training to the enumerators and supervisors. A data entry software was designed by the expatriate consultant for data entry at the field level. The data entry operators

and supervisors were given extensive training on data collection and data entry before the actual survey operation.

The progress of data collection and data entry were received at the headquarters on monthly basis. The problem encountered during survey operation and data entry was elaborately discussed and corrective measures were taken accordingly. The replacement of survey households was also monitored and reasons of replacement were gathered for justifications of such replacement.

The senior supervising officers of BBS were also visited the PSUs and monitored the progress of data collection and entry. The mechanical problems of computer and software were also solved on receipt of information at the headquarters. Thus, strong supervision and management approaches were adopted in HIES 2010. This facilitated the receipt of soft copy of data of the previous month through e-mail in the headquarters within the 1st week of the next month.

CONCEPTS, DEFINITIONS AND LIMITATIONS

Bonus, Festival:

Cash financial benefit received by the employees of government, semi-government, autonomous body, public enterprises or similar organization in addition to normal wages and salaries on the occasion of yearly religious festival or incentive bonus received by the employees of business or industrial enterprises.

Calorie:

Calorie is the unit of heat. It is the amount of heat that requires to change the temperature of 1 cc of water to 1 degree Celsius. In case of poverty measurement, we used k. cal as the unit. It means that, the amount of heat required changing the temperature of one kilogram of water to 1 degree Celsius.

Care, Personal:

Personal care items include soaps, cream, snow, powder, lipstick, shampoo, razor, blades, hairdresser, laundry and cleaning materials, etc.

Cereals:

Cereals included rice and rice flour, wheat and wheat flour, maize and various products made of rice and wheat.

Currently Student:

A person aged 5 years and above currently attending any educational institution on full or part time basis.

Earners:

An earner is a person who brings material return in cash or kind for services rendered and for the use of goods. Services imply labour in organization of production, while goods imply land property and capital. Thus, a pensioner is an earner as long as he receives pension in recognition of his past services. A landlord is also treated as an earner, because he receives rent for the use of land or property. The concepts of earner include all persons who receive incomes and hence are similar to the definition used for depicting economically active persons including self employed.

Earning from Trade, Commerce and Industry:

Earning has been defined as gross yearly income received from trade, commerce or industry minus expenditure incurred to generate gross income from trade, commerce or industry.

Education, Formal:

Education received from any type of education institution.

Educational Institutions:

Educational institutions mean any primary school, kindergarten school, high school, college, university, madrasa (religious institutions) technical/vocational school, etc.

Effects, personal:

Consumption items include handbags, belts, umbrellas, walking sticks, sun-glass, watch, cigarette lighter and jewellery, etc.

Employment Status of Household Member:

Various categories were used to depict employment status of household members. Employer implies person who employs other persons (say, as agricultural or industrial wage labours) and related to employers engaged in agricultural, as well as, non-agricultural sectors. Self-employed include owner-cultivators, owner cum-tenants, self-employees in forestry, livestock and fishery sectors, as well as, persons engaged in non-agricultural self employment activities. Employees refers to persons who work as service holders of government, semi-government and autonomous bodies, service workers or private sector enterprises (both organised and unorganised). The category other included agricultural wage labourers, non-agricultural labourers, householders, etc.

Family Member:

A family member is a person who depends on the family. Family member can be a head of household, spouse, unmarried sons and daughters, married sons who are direct dependants, parents, unmarried sisters divorced or separated daughters or sisters. Servants, labourers and lodgers who have no other usual place of residence but live and eat together within the household with or without payments are not considered as family members.

Fitra:

A religious levy binding on every solvent Muslim family (Who is capable) to pay to any poor person (willing to accept) before Eid-ul-fitar festival. Rate of fitra per person is fixed according to prevailing market price of 1.75 kg of wheat, by the religious leaders before Eid-ul-fitar,

Goods, Durable:

Durable goods are those whose individual life expectancy is one year or more. These include radio, TV, Tape, recorders, wooden and steel furniture, china-ware (not for daily use), cutlery and kitchen utensils, etc.

Goods, Non-Durable:

Item whose durability is less than one year are termed as non-durable goods. These are food items, clothing, fuel and lighting, medicines, etc. Services are also regarded as non-durable goods.

Household:

Household is the smallest unit of social institution. Almost all the socio-economic activities are being performed around this unit. It can be defined as a dwelling unit where one or more persons live and eat together under a common cooking arrangement. Matrimonial or blood or both relations, exist among most of the persons who reside in the dwelling.

Household Expenditure:

Household expenditure includes household consumption and certain other outlays of the household. Consumption expenditure of the household is the aggregate value of goods and services actually consumed during the reference period. The non-consumption expenditure of the household includes income tax and other taxes, pension and social security contributions and related insurance premium, gifts and other transfers. Items excluded from the expenditure schedule are additions to saving, various types of investment expenditure (both monetised and non monetised) including amount spent.

Household, Head of:

Head of household means a member of the household who is the decision- maker regarding the different activities of the household. This household is also being run under his command. In case of Household Income and Expenditure Survey, a Member is regarded as head of a household whom the other members consider him so. Generally, the eldest male or female earner of the household or the main decision-maker is considered to be the head of household.

Household, member:

Household member include permanent family members, as well as, boarders and lodgers, servants and other employees who often live in the household and take food together. These also included person temporarily away from the household. persons whose usual place of residence elsewhere but found staying with the household at the time of enumeration are not deemed a members of the household. Guests visiting a household temporarily or a person normally resides and takes food outside is not considered as a member of the household for the survey.

Income, Actual Agricultural:

Actual agricultural income has been defined as the income received from gross household agricultural produce from crop, poultry, bovine, etc. minus expenditure incurred to produce the gross agricultural produce.

Income: Actual Agricultural (Regular)-Non-Cash:

Yearly wages and salary received in kind from regular employment or investment in agriculture.

Income, Household:

Income means material return in cash or kind received in exchange of goods and services in a particular period. In case of household income, it refers to the material return of all the members of the household in the same period. So, household income in a particular period can be defined as the sum of the earnings of all the members of the household in cash or kind in the same period of time. Income from wages and salaries, pensions, contributions and professional fees earned by the members of the household are estimated on yearly basis.

Income from interest, dividends, earnings from agricultural activities, business, commercial and industrial establishments, land and property, rent, gifts and assistance and insurance benefits, including other special types or receipts by the member of the household are also estimated on yearly basis.

Income, Imputed:

Assigning a value to any goods consumed or services enjoyed by the household received as gifts or home made or procured in any other manner other than cash purchase. Rent of a rent-free/owner-occupied house, values of home-made goods or services are the examples of imputed income.

Income, Non-Agriculture:

The nonagricultural income of the households are those income which was accumulated from business, industry and investment in different sectors. These income are collected on yearly basis.

Income, Other Sources of:

Include receipt from dis-saving and dis-investment of assets and properties, as well as, loan repayments received, etc. Also security benefits, G.P. Fund receipts, windfall gains, etc.

Income, Secondary Extra:

Income received from extra source other than main source. This share of extra income must be less than that of main source.

Land, Cultivable:

Land under temporary agricultural crop such as paddy, jute, rabi crop, Kharif crop, etc. is termed as cultivable land. It also includes fallow land.

Land, Leased-In:

Land taken from other household or institution for the purpose of habitation, farming fishery, etc. in lieu of fixed rent or on share cropping basis or on mortgaged or in any other term is considered as land leased-in.

Land, Leased-Out:

Land leased out to any person or institutional in lieu of fixed rent or on share cropping basis or on mortgaged or in any other term is considered as land leased out.

Land, Operated:

Area of land under the possession of household for the purpose of habitation, farming, fishery, etc. is considered as land operated by the household. Operated land is the sum of area of land owned plus land leased-in minus land leased-out.

Land, Owned:

Legal ownership of any area of land in the name of all the family members is considered as land owned by the household.

Landless (Operated):

Household that does not have any operated land on the day of enumeration is considered as landless (operated).

Landless (Own Land):

Household that does not own any land in the name of any family member of the household is considered as landless (Own land).

Literate:

A person aged 7 years and above and who is able to write a letter is considered as literate.

Occupation:

Occupation is generally the acceptable means of income to fulfil the financial requirement. It can be defined as a means associated with the activities from which the individual earns livelihood. Occupation may be a major or a minor, according to the grater or smaller share in income.

Pension:

Currently received allowances in lieu of services rendered in past to government, semi-government, autonomous bodies, non-government organisation, international bodies, private or any other organisation.

Poverty-(DCI), Absolute:

For measuring the degree of poverty in DCI method, a person whose daily calorie intake is lower than 2122 k.cal is considered in the category of absolute poverty.

Poverty-(DCI), Hard-Core:

For measuring the degree of poverty in DCI method, a person whose daily calorie intake is lower than 1805 k.cal is considered in the category of hard-core poverty.

Poverty-(DCI), Hard-Ultra:

For measuring the degree of poverty in DCI method, a person whose daily calorie intake is lower than 1600 k.cal is considered in the category of ultra poverty.

Poverty (CBN):

Poverty is the state of poorness. It can be earmarked by income level of the household. The concept of absolute poverty is the minimum level of income that is needed for physical survival. Thus a poverty line can be defined as the minimum level of household income that can be able to purchase a bundle of goods and services to satisfy the basic needs of the household.

Protein:

Protein is one of the nutrients of food that is responsible for growth of human body. It is also responsible for maintaining or increasing the resistance power of the body.

Ratio, Dependency:

It relates to the ratio of population in the age group 0-14 and 60 years and over to the population in the working age 15-59.

Ratio, Sex:

It is the number of male per hundred female.

Reading Materials, Recreational:

Items, such as, newspapers, magazines, cinema, journals, membership fees for sports or recreational organizations, license fees for TV, VCR, radio, etc.

Training, Technical/Vocational:

Technical/Vocational training means any training on typing, shorthand, computer data entry, programming, motor mechanic, electrical, air-conditioning, refrigeration, welding, weaving, carpenter, goldsmith, blacksmith, potter, sewing work, tailoring, health and family planning technician (village doctor), agricultural extension, livestock, poultry, etc.

Water Supply:

Pure drinking water supplied from any sources maintained by the statutory body of the government of any non-government organisation.

Zakat:

A religious levy binding on every solvent Muslim family who does not have any debt and has more than 7.5 tola of gold or 52.50 tola of silver and or surplus money in excess of working capital in an accounting year. The amount of Zakat is calculated at the rate of 2.5% on the market price of gold and surplus saving.

Problems and Limitations:

1. The imputation of rental values of owner-occupied and rent free accommodation is difficult, specially in the rural areas where dwelling units are rarely rented.
2. With regard to earnings, it is difficult to determine the value of service rendered by the unpaid family members, particularly those services rendered by the unpaid female and the children. Such household members were not normally considered as earners by the respondent and therefore, their income were likely to have been under reported.
3. The respondent tend to give information relating to their household consumption items in their respective local units that may not exactly match with the official standard units. In such cases, the enumerators had been instructed to carefully convert the reported measures into official units, using a standard conversion table. Even so, the conversion in some cases might lead to upward/downward biases.

4. The scope of the HIES 2010 schedules had been broadened to meet the needs of users. The HIES 2010 questionnaire in all contained 66 pages. As a result, some of the respondents were unwilling to give adequate time to the interviewers.
5. In rural areas, the enumerators had to walk long distances with their survey schedules, laptop computer and other belongings to reach the widely scattered survey areas. Seasonal problems associated with rains and floods during the monsoon also tend to reduce the frequency of visits by the interviewer.
6. The respondents expect immediate benefits from the survey. Since, the supervisors and interviewers were not in a position to provide such benefits, often they did not receive the same degree of co-operation from the respondents in their subsequent visits.
7. For some items, respondents are asked to report the expenditures incurred over the past month or year. It is often difficult for them to recall the expenditure figures accurately. They are often confused by the use of different reference periods for different items.
8. The respondents sometimes overlook reporting the un-purchased minor items such as fruit from homestead trees, vegetables procured from the outskirts of the household, etc.
9. Sometimes interviewers keepers fail to record accurately the quantity of various food items, such as, fish, fruits and minor spices, etc. as these items generally consumed without reference to even and standard weights.
10. Only two weights were used in HES 1991-92, one for urban one for rural. On the other hand HIES 2000 used 14 weights and HIES-2005 and 2010 used 16 weight. This may not be quite compatible for comparability of the past surveys.
11. To calculate per capita calorie consumption, total quantity of food consumed was divided by the usual number of household members for making the data comparable with earlier round of surveys. Moreover, adult equivalent was not calculated for minor children and female members. Total food expenditures recorded during the survey period were also included food expenditure incurred by the household for social or religious functions but the total number of person (guests and household members) who consumed the food was not recorded. This caused an abnormal per capita calorie intake for some of the households.

Poverty Lines and Poverty Measures (CBN)

Before describing the methodology for updating poverty lines for HIES 2010, it seems logical to describe the official methodology for setting up the poverty lines for HIES 2005. Poverty lines were estimated using the cost of basic needs (CBN) method, whereby any household with per capita expenditure below a given poverty line is considered as poor. With the CBN method, poverty lines represent the level of per capita expenditure at which the members of a household can be expected to meet their basic needs (comprised of food and non-food consumption).

Making comparisons of poverty rates over time requires that CBN poverty lines in different years are of constant value in real terms. In order to ensure this, CBN poverty lines were first estimated for a new base year 2005, and then matched to 2000 for changes in the cost of living using a price index. As prices of some goods and services may vary between geographical areas in Bangladesh, poverty lines were estimated at a disaggregated level. Specifically, the country was divided into 16 different geographical areas (10 urban and 6 rural) or strata in the 2005 survey.

Poverty lines were re-estimated using Household Income and Expenditure Survey (HIES) 2005 because the previous poverty lines (estimated using Household Expenditure Survey (HES) 1991-92) are somewhat outdated and HIES 2005 used a new sampling frame that better reflects the current economic and demographic circumstances. Using this more recent sampling frame will also allow more accurate comparison with future poverty estimates, since the next few rounds of the HIES are expected to continue using the same sampling frame, till the time the next census is conducted.

The method followed for estimating the 2005 regional CBN poverty lines and the price indices are described below:

Constructing consumption aggregates

Household consumption expenditures are calculated by summing up all food and non-food expenditures (except for taxes and fees, and lumpy expenditures such as expenses for weddings). Missing housing rents were imputed using a regression where the (log of) reported rents were regressed on a set of housing characteristics and (log of) per capita income.

Estimating the Base Year 2005 (CBN) Poverty Lines

Three steps were followed for estimating what it costs a household to meet its basic needs in the base year 2005. First, the cost of a fixed food bundle was estimated. The bundle consists of eleven items; rice, wheat, pulses, milk, oil, meat, fish, potato, other vegetables, sugar and fruits, as recommended by Ravallion and Sen (1996), based on Alamgir (1974). It provides minimal nutritional requirements corresponding to 2,122 kcal per day per persons – the same threshold used to identify the absolute poor with the direct caloric intake method. The price for each item in the bundle was estimated as the mean of unit values (price per unit) of the item reported by a reference group of households, calculated separately for each of the 16 geographic areas or strata. The food poverty line was computed by multiplying the prices with the quantities in the food bundle. The second step entailed computing two non-food allowances for non-food consumption. The first was obtained by taking the median amount spent for non-food items by a group of households whose per capita total expenditure is close to the food poverty line, which is called the “lower non-food allowance”. The second was obtained by taking the median amount spent for non-food items by group of household whose per capita food expenditure is close to the food poverty line, which is called the “upper non-food allowance”. The third step consisted simply of adding to the food poverty lines the lower and upper non-food allowances to yield the total lower and upper poverty lines for each of the 16 geographical areas (see tableA1).

Updating Poverty Lines for Changes in Cost-of-Living

Price indices for updating the 2005 CBN food poverty lines to 2010 prices were derived by the food price information available in the HIES data sets. The HIES data provides price information of food items that account for more than 60 percent of total household expenditure. A food price index was computed using the price and budget share of each food item from HIES surveys. The food poverty line of 2005 was first updated with this survey based food price index. The nonfood poverty line was re-estimated using CBN method to account for the changes in nonfood - food ratios.

The household survey based food price indices were derived in four steps. First, expenditures on various items in both HIES 2005 and 2010 were divided into 13 groups. These groups were chosen so as to retain as much desegregations as possible (to minimize

heterogeneity within categories) as well as to be comparable across the two survey years. Second, unit values (by dividing expenditures by quantity) of the most commonly consumed item within each of the expenditure groups were calculated for each household. For each group, the median of the unit values within each geographic region was calculated. Using the price of the most commonly consumed item within each group and medians (which are more robust to outliers as compared to means) for the summary region-specific unit values helped minimize the problem that the calculated unit values are affected significantly by quality issues. Third, average budget share of the 13 main expenditure groups were calculated for each survey year. Finally, region-specific tornqvist price indices were calculated using budget shares of the expenditure groups along with median prices of the selected items². The tornqvist price indices for each region k were calculated as follows:

$$\ln P_{10}^{TK} = \sum_{j=1}^n \frac{w_{1j}^k + w_{0j}^k}{2} \ln \left(\frac{P_{1j}^k}{P_{0j}^k} \right)$$

where P denotes the tornqvist price index for region k , 1 and 0 denote the two years of comparison, w_{1j} and w_{0j} are the respective budget shares, and p_{1j} and p_{0j} are the respective prices for good j in the two years of comparison.

¹ The reference group was taken as the group of households belonging to the 2nd to 6th deciles of per capita expenditure – to reflect the prices faced by households that are within a reasonable range around the level of consumption where the poverty line is expected to be.

² The Tornqvist price index was preferred to the Laspeyres or Paache indices because it uses budget shares averaged between consecutive years, and therefore allows for changes in consumption patterns over time.

Poverty Trends

Poverty headcount rates based on both the upper as well as lower poverty lines show poverty in Bangladesh have declined considerably between 2005 and 2010 (Table-1). In 2005, 40% of Bangladesh's population was poor (as measured by the upper poverty line) as compared to 31.5% in 2010. Similarly, 25% of the country's population was very poor (i.e. below the lower poverty line) in 2005 as compared to 17.6% in 2010.

Table-1: Poverty Headcount Rates

Residence	Upper Poverty Line		Lower Poverty Lines	
	2010	2005	2010	2005
National	31.5	40.0	17.6	25.1
Urban	21.3	28.4	7.7	14.6
Rural	35.2	43.8	21.1	28.6

Sensitivity Analysis and Robustness Checks

The poverty estimates presented earlier depend critically on how the underlying poverty lines were derived. This section will explore other alternative methodologies to estimating these lines, and show that the trends and direction of poverty reduction shown above are robust. Here two alternative approaches will be used for the purpose.

The first sensitivity test is to estimate poverty incidence using food expenditures and food poverty lines (According to Lanjouw and Lanjouw (2002)) under certain assumptions of consumption expenditures, the poverty headcount rates estimated from the approach theoretically should be the same as the BBS estimates, i.e those estimated from total consumption expenditures and the CBN upper poverty lines. In reality, since there are many measurement and sampling errors that prevent these assumptions from holding, it is often the case that these two estimates are close to each other, rather than being exactly be the same. This is also a test whether nonfood expenditures are properly reported. Table 2 confirms that the poverty headcount rates based on food consumption and food poverty line in 2010 are similar to the BBS recommended estimates.

Table-2: Comparison in 2010 poverty headcount rates.

Residence	Approach-1	Recommended estimates
National	30.7	31.5
Urban	17.8	21.3
Rural	35.3	35.2

The second sensitivity test is to estimate poverty incidence using alternative definitions of consumption aggregates and alternative ways to setting the poverty lines. For example, some nonfood items are excluded from the expenditure aggregate on the basis that those items are irregular, non-frequent and lumpy in nature. They do not reflect household's command over resources on average. Thus creating a new measure of total expenditures that includes the previously excluded irregular nonfood expenditures and estimating nonfood allowances for setting the new CBN poverty lines, the incidence of poverty was computed. Table-3 compares the new poverty rates with one based on the original definitions of expenditures. Table 3 shows that the poverty headcount rates based on two definitions described above are very similar to the BBS recommended estimates.

Table-3: Comparison in 2010 poverty headcount rates using different Definitions in consumption aggregates

Residence	Approach-2	Recommended estimates
National	32.3	31.5
Urban	22.4	21.3
Rural	35.8	35.2

15. Project Director, HIES	Member-Secretary

Minutes of the discussion meeting on the methodology for estimation of poverty line using (HIES)-2010 data.

A discussion meeting on the methodology for estimation of poverty line using data of the HIES-2010 was held on April 21, 2011 at the Conference room of the Secretary Statistics Division. The meeting was chaired by Dr. Wahid Uddin Mahmood, Professor, Department of Economics, Dhaka University. Other members present in the meeting were as follows (not according to seniority):

01	Ms. Riti Ibrahim	Secretary, Statistics Division
02	Mr. Md. Shahjahan Ali Mollah	Director General, BBS
03	Dr. Mustafa Mujeri	Director General, BIDS, Dhaka
04	Mr. Fakrul Ahsan	Division Chief, GED, Planning Commission
05	Dr. PK Md. Matiur Rahman	Professor, ISRT, University of Dhaka
06	Mr. Kazi Akhtar Uddin Ahmed	Joint Secretary, Statistics Division
07	Mr. Abdus satter Miah	General Manager, Statistics Department, Bangladesh Bank
08	Mr. Abul Monsur	Deputy Economic Adviser, Finance Division
09	Mr. Faizuddin Ahmed	Consultant, World Bank
10	Mr. Md. Zahidul Hoque Sardar	Project Director, HIES, BBS

02. At the very outset, the Chairman welcomed everyone and requested the Project Director, HIES to highlight the methodology for estimation of poverty line using data of the HIES-2010.

03. Mr. Faizuddin Ahmed, consultant, World Bank presented some indicators on remittances, social safety net (% of GDP), literacy rate, access to electricity rate, per capita daily consumption of major food items, per capita monthly income, per capita monthly consumption expenditure, per capita consumption inequality (Gini), and per capita income inequality through a PowerPoint presentation. He showed that these indicators positively indicate reduction of poverty in 2010 from the level estimated in 2005.

04. Mr. Ahmed presented four different methodologies for estimating poverty lines. Although the end results of these methodologies do not vary significantly, yet he invited the experts to consider various implications of each of these methodologies.

05. After a threadbare discussion on the implications of each method, the experts took the decision to adopt the 3rd option (as given below) for estimation of poverty level basically for reasons of transparency and applicability:

- Update food poverty lines by food price inflation rates calculated from unit values of HIES 2005 and 2010 data.
- Re-estimate nonfood poverty line using HIES 2010 data taking care of the changes in the nonfood-food ratios.

06. The meeting appreciated presentation of some key indicators on HIES-2010 in a relatively short time.

07. The meeting ended with a vote of thanks to and from the chair.

Department of Economics
University of Dhaka

List of Officials Responsible for Overall Management of HIES-2010

Sl. No.	Name	Designation
1.	Ms. Riti Ibrahim	Secretary, Statistics Division
2.	Mr. Md. Shahjahan Ali Mollah	Director General, BBS
3.	Mr. Md. Zahidul Hoque Sardar	Project Director, HIES

Divisional Coordinators

Sl. No.	Name	Designation
1.	Mr. Md. Shamsul Alam	Director, BBS
2.	Mr. Sattya Ronjon Mondol	Joint Director, BBS
3.	Mr. Md. Shaheen	Deputy Director, BBS
4.	Mr. Md. Abdul Kadir Mia	Deputy Director, BBS
5.	Mr. Md. A.K.M. Fazlul Haque	Deputy Director, BBS
6.	Mr. Bidhan Baral	Deputy Director, BBS
7.	Mr. Md. A.K.M. Ashraful Haque	Deputy Director, BBS
8.	Mr. A.K.M Tahidul Islam	Deputy Director, BBS

Supervising Officers

Sl. No.	Name	Designation
1.	Mr. Lizen Shah Nayiem	Regional Statistical Officer, Barisal
2.	Mr. Md. Abdul Khaleque	Deputy Director, BBS
3.	Mr. Monir Hossain Tapader	Asst. Statistical Officer, BBS
4.	Mr. Babul Ranjan Bhumik	Regional Statistical Officer (C.C)
5.	Mr. Md. Saddam Hossain Khan	Regional Statistical Officer, Rangamati
6.	Mr. Md. Wahidur Rahman	Regional Statistical Officer, Chittagong
7.	Mr. Md. Saifur Rahman	Regional Statistical Officer, Noakhali
8.	Mr. Md. Kamrul Islam	Regional Statistical Officer, Sylhet
9.	Mr. Md. Mohiuddin Ahmed	Regional Statistical Officer, Comilla
10.	Mr. Md. Abul Hossain	Asst. Statistical Officer, BBS
11.	Mr. Md. Fokoruddin Ahmed	Statistical Officer, BBS
12.	Mr. Asraful Alam Siddique	Regional Statistical Officer, Kishoregonj
13.	Mr. Abdul Alim Bhuiyan	Statistical Officer, BBS
14.	Mr. Salim Sarker	Regional Statistical Officer, Mymensing
15.	Mr. Md. Atikul Kabir	Regional Statistical Officer, Jamalpur
16.	Mr. Md. Safiqul Islam	Regional Statistical Officer, Tangail
17.	Mr. Md. Ariful Islam	Regional Statistical Officer, Dinajpur
18.	Mr. Md. Firoz Ahmed Sarder	Asst. Statistical Officer, BBS
19.	Mr. S.M. Anisuzzaman	Regional Statistical Officer, Rangpur
20.	Mr. Md. Saidur Rahman (HIES)	Asst. Statistical Officer, BBS
21.	Mr. H.M. Firoz	Regional Statistical Officer, Bogra
22.	Mrs. Salma Hasnayan	Regional Statistical Officer, Pabna
23.	Mr. Abdul Halim	Regional Statistical Officer, Rajshahi
24.	Mr. Monirul Islam	Asst. Statistical Officer, BBS
25.	Mr. Mizanur Rahman Howlader	Regional Statistical Officer, Khulna
26.	Mr. Dinesh Chandro Roy	Asst. Programmer, HIES, BBS
27.	Mr. Alamgir Hossain	Regional Statistical Officer, Jessore
28.	Mr. Mostofa Asrafuzzaman	Statistical Officer, BBS
29.	Mr. Iftakharul Karim	Regional Statistical Officer, Kustia
30.	Mrs. Minakhi Biswas	Regional Statistical Officer, Faridpur
31.	Mr. Mahabubur Rahman	Deputy Director, BBS
32.	Mr. Md. Saidur Rahman	Statistical Officer, BBS
33.	Mr. Md. Razaul Karim	Programmer, HIES, BBS
34.	Mr. Mizanur Rahman	Statistical Officer, BBS
35.	Mr. Md. Kamrul Islam	Statistical Officer, BBS

Name of Enumerator cum Data Entry Operators

Sl. No.	Name
1.	Md. Nymur Rahman
2.	Md. Abu Moonsur
3.	Md. Abdul Ohahid
4.	Md. Shafiul Islam
5.	Ms. Nahida Sultana
6.	Md. Ruhul Amin Akand
7.	Ms. Nasima Akther
8.	Nurul Kabir
9.	Md. Ziaur Rahman
10.	Md. Abu Awal
11.	Abdul Alim
12.	Md. Al Amin
13.	Md. Shariful Islam
14.	Zatish Chandro Sarkar
15.	Md. Rafiqul Islam
16.	Ariful Islam
17.	Ms. Afroza Parvin
